## ***1 Global Elements***

## 1.1 event

### 1.1.1 Description:

An abstract global element used as a basis for substitution of event types

### 1.1.2 Contents:

Element event is defined by the complex type Event

### 1.1.3 Used by:

- Complex type: DataDocument

### 1.1.4 Substituted by:

- Element: creditEventNotice

### 1.1.5 Figure:

### 1.1.6 Schema Fragment:

```
<xsd:element name="event" type="Event" abstract="true">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      An abstract global element used as a basis for substitution of
      event types
    </xsd:documentation>
  </xsd:annotation>
</xsd:element>
```

## 1.2 strategy

### 1.2.1 Description:

A strategy product.

### 1.2.2 Contents:

Element strategy is defined by the complex type Strategy

### 1.2.3 Used by:

### 1.2.4 Substituted by:

### 1.2.5 Figure:

### 1.2.6 Schema Fragment:

```
<xsd:element name="strategy" type="Strategy" substitutionGroup="product">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A strategy product.
    </xsd:documentation>
  </xsd:annotation>
</xsd:element>
```

## ***2 Global Complex Types***

## 2.1 Account

### 2.1.1 Description:

A generic account that represents any party's account at another party. Parties may be identified by the account at another party.

### 2.1.2 Contents:

**accountBeneficiary** (zero or one occurrence; of the type Reference) A reference to the party beneficiary of the account.

### 2.1.3 Used by:

- Complex type: Party

### 2.1.4 Derived Types:

### 2.1.5 Figure:

### 2.1.6 Schema Fragment:

```
<xsd:complexType name="Account">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A generic account that represents any party's account at another
      party. Parties may be identified by the account at another party.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:sequence>
    <xsd:sequence maxOccurs="unbounded">
      <xsd:element name="accountId" type="AccountId">
        <xsd:annotation>
          <xsd:documentation xml:lang="en">
            An account identifier. For example an Account number.
          </xsd:documentation>
        </xsd:annotation>
      </xsd:element>
      <xsd:element name="accountName" type="xsd:normalizedString" minOccurs="0">
        <xsd:annotation>
          <xsd:documentation xml:lang="en">
            The name by which the account is known.
          </xsd:documentation>
        </xsd:annotation>
      </xsd:element>
    </xsd:sequence>
    <xsd:element name="accountBeneficiary" type="Reference" minOccurs="0">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          A reference to the party beneficiary of the account.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
  </xsd:sequence>
</xsd:complexType>
```

```
        </xsd:annotation>
      </xsd:element>
    </xsd:sequence>
    <xsd:attribute name="id" type="xsd:ID" use="required">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          The unique identifier for the account within the document.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:attribute>
  </xsd:complexType>
```

## 2.2 AccountId

### 2.2.1 Description:

The data type used for party identifiers.

### 2.2.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type `xsd:normalizedString`)

### 2.2.3 Used by:

- Complex type: Account

### 2.2.4 Derived Types:

### 2.2.5 Figure:

### 2.2.6 Schema Fragment:

```
<xsd:complexType name="AccountId">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      The data type used for party identifiers.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:simpleContent>
    <xsd:extension base="xsd:normalizedString">
      <xsd:attribute name="accountIdScheme" type="xsd:anyURI">
        <xsd:annotation>
          <xsd:documentation xml:lang="en">
            The identifier scheme used with this accountId. A unique
            URI to determine the authoritative issuer of these
            identifiers.
          </xsd:documentation>
        </xsd:annotation>
      </xsd:attribute>
    </xsd:extension>
  </xsd:simpleContent>
</xsd:complexType>
```

## 2.3 Allocation

### 2.3.1 Description:

### 2.3.2 Contents:

**allocationTradeId** (exactly one occurrence; of the type PartyTradeIdentifier) Unique ID for the allocation.

Either

**accountReference** (exactly one occurrence; of the type Reference) Reference to the subaccount definition in the Party list.

Or

**partyReference** (exactly one occurrence; of the type Reference) Reference to the party definition.

Either

**allocatedFraction** (exactly one occurrence; of the type xsd:decimal) The fractional allocation (0.45 = 45%) of the notional and "block" fees to this particular client subaccount.

Or

**allocatedNotional** (exactly one occurrence; of the type Money) The notional allocation (amount and currency) to this particular client account.

**collateral** (zero or one occurrence; of the type Collateral) The sum that must be posted upfront to collateralize against counterparty credit risk.

**creditChargeAmount** (zero or one occurrence; of the type Money) Special credit fee assessed to certain institutions.

**approvals** (zero or one occurrence; of the type Approvals) A container for approval states in the workflow.

**masterConfirmationDate** (zero or one occurrence; of the type xsd:date) The date of the confirmation executed between the parties and intended to govern the allocated trade between those parties.

### 2.3.3 Used by:

- Complex type: Allocations

### 2.3.4 Derived Types:

### 2.3.5 Figure:

### 2.3.6 Schema Fragment:

```

<xsd:complexType name="Allocation">

</xsd:complexType>
```

## 2.5 AllocationTradeIdentifier

### 2.5.1 Description:

This type is used to identify that a trade id is referring to a block trade.

### 2.5.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type PartyTradeIdentifier)

- A type defining one or more trade identifiers allocated to the trade by a party. A link identifier allows the trade to be associated with other related trades, e.g. trades forming part of a larger structured transaction. It is expected that for external communication of trade there will be only one tradeId sent in the document per party.

**blockTradeId** (zero or one occurrence; of the type PartyTradeIdentifier) The trade id of the block trade. This is used by each one of the allocated trades to reference the block trade.

### 2.5.3 Used by:

### 2.5.4 Derived Types:

### 2.5.5 Figure:

  </xsd:complexContent>
</xsd:complexType>
```

## 2.6 Approval

### 2.6.1 Description:

A specific approval state in the workflow.

### 2.6.2 Contents:

**type** (exactly one occurrence; of the type xsd:normalizedString) The type of approval (e.g. "Credit").

**status** (exactly one occurrence; of the type xsd:normalizedString) The current state of approval (.e.g preapproved, pending approval, etc.)

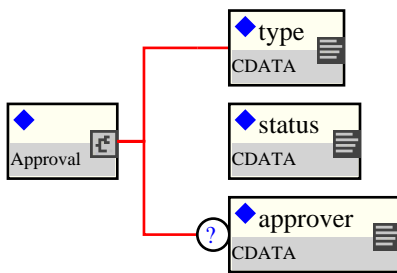

**approver** (zero or one occurrence; of the type xsd:normalizedString) The full name or identifying ID of the relevant approver.

### 2.6.3 Used by:

- Complex type: Approvals

### 2.6.4 Derived Types:

### 2.6.5 Figure:

</xsd:complexType>
```

## 2.8 BlockTradeIdentifier

### 2.8.1 Description:

This type is used to identify that a trade id is referring to a block trade.

### 2.8.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type PartyTradeIdentifier)

- A type defining one or more trade identifiers allocated to the trade by a party. A link identifier allows the trade to be associated with other related trades, e.g. trades forming part of a larger structured transaction. It is expected that for external communication of trade there will be only one tradeId sent in the document per party.

**allocationTradeId** (zero or more occurrences; of the type PartyTradeIdentifier) The trade id of the allocated trade. This is used by the block trade to reference the allocated trade.

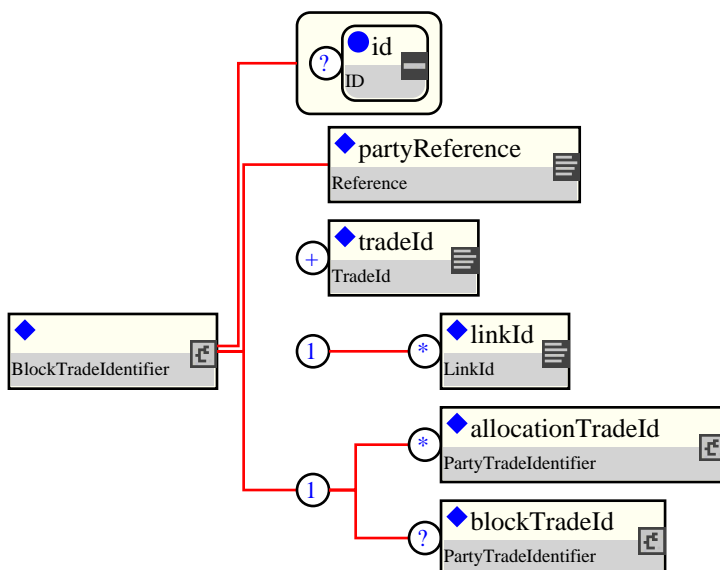

**blockTradeId** (zero or one occurrence; of the type PartyTradeIdentifier) The trade id of the parent trade for N-level allocations. This element is only used to model N-level allocations in which the trade acts as block and allocated trade at the same time. This basically means the ability to allocate a block trade to multiple allocation trades, and then allocate these in turn to other allocation trades (and so on if desired).

### 2.8.3 Used by:

- Complex type: RequestAllocation

### 2.8.4 Derived Types:

### 2.8.5 Figure:

### 2.8.6 Schema Fragment:

```
<xsd:complexType name="BlockTradeIdentifier">

</xsd:complexContent>
</xsd:complexType>

```

## 2.9 Collateral

### 2.9.1 Description:

A type for defining the obligations of the counterparty subject to credit support requirements

### 2.9.2 Contents:

**independentAmount** (exactly one occurrence; of the type IndependentAmount) Independent Amount is an amount that usually less creditworthy counterparties are asked to provide. It can either be a fixed amount or a percentage of the Transaction's value. The Independent Amount can be: (i) transferred before any trading between the parties occurs (as a deposit at a third party's account or with the counterparty) or (ii) callable after trading has occurred (typically because a downgrade has occurred). In situation (i), the Independent Amount is not included in the calculation of Exposure, but in situation (ii), it is included in the calculation of Exposure. Thus, for situation (ii), the Independent Amount may be transferred along with any collateral call. Independent Amount is a defined term in the ISDA Credit Support Annex. ("with respect to a party, the amount specified as such for that party in Paragraph 13; if no amount is specified, zero")

### 2.9.3 Used by:

- Complex type: Allocation
- Complex type: Trade

### 2.9.4 Derived Types:

```

## 2.10 DataDocument

### 2.10.1 Description:

A type defining a content model that is backwards compatible with older FpML releases and which can be used to contain sets of data without expressing any processing intention.

### 2.10.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type Document)

- The abstract base type from which all FpML compliant messages and documents must be derived.

**validation** (zero or more occurrences; of the type Validation)

**party** (zero or more occurrences; of the type Party) The parties obligated to make payments from time to time during the term of the trade. This will include, at a minimum, the principal parties involved in the swap or forward rate agreement. Other parties paying or receiving fees, commissions etc. must also be specified if referenced in other party payments.

### 2.10.3 Used by:

- Complex type: ValuationDocument

### 2.10.4 Derived Types:

- Complex type: ValuationDocument

### 2.10.5 Figure:

  </xsd:simpleContent>
</xsd:complexType>
```

## 2.14 IndependentAmount

### 2.14.1 Description:

### 2.14.2 Contents:

**payerPartyReference** (exactly one occurrence; of the type Reference) A reference to the party responsible for making the payments defined by this structure.

**receiverPartyReference** (exactly one occurrence; of the type Reference) A reference to the party that receives the payments corresponding to this structure.

**paymentDetail** (one or more occurrences; of the type PaymentDetail) A container element allowing a schedule of payments associated with the Independent Amount.

### 2.14.3 Used by:

- Complex type: Collateral

### 2.14.4 Derived Types:

### 2.14.5 Figure:

### 2.14.6 Schema Fragment:

      <xsd:attribute name="linkIdScheme" type="xsd:anyURI" use="required"/>
    </xsd:extension>
  </xsd:simpleContent>
</xsd:complexType>
```

## 2.16 Party

### 2.16.1 Description:

A type defining party information.

### 2.16.2 Contents:

**partyId** (one or more occurrences; of the type PartyId) A party identifier, e.g. a S.W.I.F.T. bank identifier code (BIC).

**partyName** (zero or one occurrence; of the type xsd:normalizedString) The name of the party. A free format string. FpML does not define usage rules for this element.

**account** (zero or more occurrences; of the type Account) Accounts serviced by this party. These are not accounts where this party is beneficiary, but instead where they are provided and by this party to the beneficiary party.

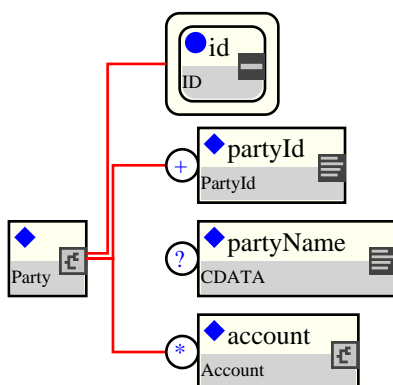

### 2.16.3 Used by:

- Complex type: AcceptQuote
- Complex type: AllocationAmended
- Complex type: AllocationCancelled
- Complex type: AllocationCreated
- Complex type: AmendmentConfirmed
- Complex type: CancelTradeCashflows
- Complex type: CancelTradeConfirmation
- Complex type: CancelTradeMatch

    </xsd:extension>
  </xsd:simpleContent>
</xsd:complexType>
```

## 2.18 PartyPortfolioName

### 2.18.1 Description:

A type to represent a portfolio name for a particular party.

### 2.18.2 Contents:

**partyReference** (exactly one occurrence; of the type Reference) A pointer style reference to a party identifier defined elsewhere in the document. The party referenced has allocated the trade identifier.

**portfolioName** (one or more occurrences; of the type PortfolioName)

### 2.18.3 Used by:

- Complex type: Portfolio

### 2.18.4 Derived Types:

### 2.18.5 Figure:

### 2.18.6 Schema Fragment:

```
<xsd:complexType name="PartyPortfolioName">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A type to represent a portfolio name for a particular party.

      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          A pointer style reference to a party identifier defined
          elsewhere in the document. The party referenced has allocated
          the trade identifier.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
    <xsd:element name="portfolioName" type="PortfolioName" maxOccurs="unbounded"/>
  </xsd:sequence>
  <xsd:attribute name="id" type="xsd:ID"/>
</xsd:complexType>
```

## 2.19 PartyRole

### 2.19.1 Description:

A generic party role type. This can be extended to provide specialization of roles.

### 2.19.2 Contents:

Either

**party** (exactly one occurrence; of the type Reference) A reference to the party fulfilling this role.

Or

**account** (exactly one occurrence; of the type Reference) A reference to the account fulfilling this role.

### 2.19.3 Used by:

- Complex type: TradeSide

### 2.19.4 Derived Types:

### 2.19.5 Figure:

### 2.19.6 Schema Fragment:

```
<xsd:complexType name="PartyRole">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A generic party role type. This can be extended to provide
      specialization of roles.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:choice>
    <xsd:annotation>
      <xsd:documentation xml:lang="en">
        The party fulfilling this role can be identified either
        directly, or indirectly via the account used to fulfil this
        role.
      </xsd:documentation>
    </xsd:annotation>
    <xsd:element name="party" type="Reference">
      <xsd:annotation>

      </xsd:annotation>
    </xsd:element>
  </xsd:choice>
</xsd:complexType>
```

## 2.20 PartyTradeldentifier

### 2.20.1 Description:

A type defining one or more trade identifiers allocated to the trade by a party. A link identifier allows the trade to be associated with other related trades, e.g. trades forming part of a larger structured transaction. It is expected that for external communication of trade there will be only one tradeld sent in the document per party.

### 2.20.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type Tradeldentifier)

- A type defining a trade identifier issued by the indicated party.

**linkld** (zero or more occurrences; of the type Linkld) A link identifier allowing the trade to be associated with other related trades, e.g. the linkld may contain a tradeld for an associated trade or several related trades may be given the same linkld. FpML does not define the domain values associated with this element. Note that the domain values for this element are not strictly an enumerated list.

### 2.20.3 Used by:

- Complex type: AllocationTradeldentifier
- Complex type: BlockTradeldentifier
- Complex type: Allocation
- Complex type: AllocationCancelled
- Complex type: AllocationTradeldentifier
- Complex type: BlockTradeldentifier
- Complex type: CancelTradeConfirmation
- Complex type: CancelTradeMatch
- Complex type: ConfirmTrade
- Complex type: PartyTradeldentifiers
- Complex type: TradeAmendment
- Complex type: TradeHeader
- Complex type: TradeldentifyingItems
- Complex type: TradeValuationItem

### 2.20.4 Derived Types:

- Complex type: AllocationTradeldentifier
- Complex type: BlockTradeldentifier

### 2.20.5 Figure:

## 2.20.6 Schema Fragment:

```
<xsd:complexType name="PartyTradeIdentifier">

  <xsd:sequence>
    <xsd:element name="partyTradeIdentifier" type="PartyTradeIdentifier" maxOccurs="unbounded"/>
  </xsd:sequence>
</xsd:complexType>
```

## 2.22 PartyTradeInformation

### 2.22.1 Description:

A type defining additional information that may be recorded against a trade.

### 2.22.2 Contents:

**partyReference** (exactly one occurrence; of the type Reference) Identifies that party that has ownership of this information.

**trader** (zero or more occurrences; of the type Trader) Identifies the person or persons who assumed the role of trader for this trade.

### 2.22.3 Used by:

- Complex type: TradeHeader

### 2.22.4 Derived Types:

### 2.22.5 Figure:

### 2.22.6 Schema Fragment:

```
<xsd:complexType name="PartyTradeInformation">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A type defining additional information that may be recorded
      against a trade.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:sequence>
    <xsd:element name="partyReference" type="Reference">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          Identifies that party that has ownership of this information.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
    <xsd:element name="trader" type="Trader" minOccurs="0" maxOccurs="unbounded">
      <xsd:annotation>

          Identifies the person or persons who assumed the role of
          trader for this trade.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
  </xsd:sequence>
</xsd:complexType>
```

## 2.23 PaymentDetail

### 2.23.1 Description:

### 2.23.2 Contents:

Either

**adjustablePaymentDate** (exactly one occurrence; of the type AdjustableDate2) A fixed amount payment date that shall be subject to adjustment in accordance with the applicable business day convention if it would otherwise fall on a day that is not a business day. The applicable business day convention and business day are those specified in the dateAdjustments element within the generalTerms component. ISDA 2003 Term: Fixed Rate Payer Payment Date

Or

**adjustedPaymentDate** (exactly one occurrence; of the type xsd:date) The adjusted payment date. This date should already be adjusted for any applicable business day convention. This component is not intended for use in trade confirmation but may be specified to allow the fee structure to also serve as a cashflow type component.

Either

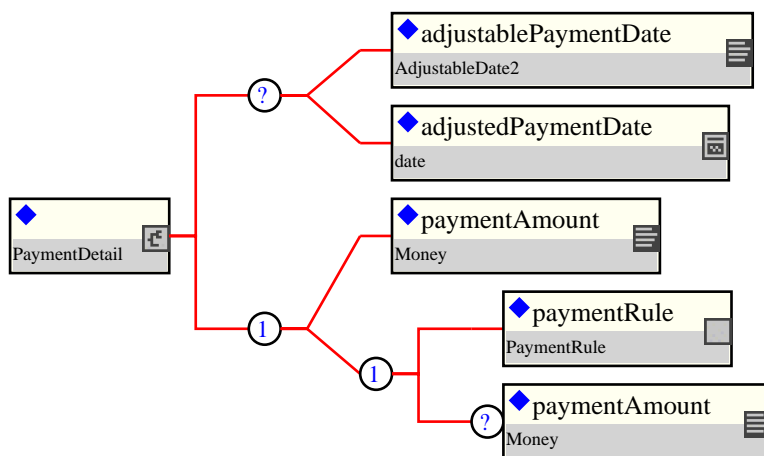

**paymentAmount** (exactly one occurrence; of the type Money) A fixed payment amount.

### 2.23.3 Used by:

- Complex type: IndependentAmount

### 2.23.4 Derived Types:

### 2.23.5 Figure:

### 2.23.6 Schema Fragment:

```
<xsd:complexType name="PaymentDetail">
  <xsd:sequence>

      independent amount must be derived.
    </xsd:documentation>
  </xsd:annotation>
</xsd:complexType>
```

## 2.25 PercentageRule

### 2.25.1 Description:

A type defining a content model for a calculation rule defined as percentage of the notional amount.

### 2.25.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type PaymentRule)

- The abstract base type from which all calculation rules of the independent amount must be derived.

**paymentPercent** (exactly one occurrence; of the type xsd:decimal) A percentage of the notional amount.

**notionalAmountReference** (exactly one occurrence; of the type Reference) A reference to the notional amount.

### 2.25.3 Used by:

### 2.25.4 Derived Types:

### 2.25.5 Figure:

### 2.25.6 Schema Fragment:

```
<xsd:complexType name="PercentageRule">

            </xsd:documentation>
          </xsd:annotation>
        </xsd:element>
      </xsd:sequence>
    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

## 2.26 Portfolio

### 2.26.1 Description:

A type representing an arbitrary grouping of trade references.

### 2.26.2 Contents:

**partyPortfolioName** (zero or one occurrence; of the type PartyPortfolioName) The name of the portfolio together with the party that gave the name.

**tradeId** (zero or more occurrences; of the type TradeId)

**portfolio** (zero or more occurrences; of the type Portfolio) An arbitrary grouping of trade references (and possibly other portfolios).

### 2.26.3 Used by:

- Element: portfolio
- Complex type: QueryPortfolio
- Complex type: DataDocument
- Complex type: Portfolio

### 2.26.4 Derived Types:

- Complex type: QueryPortfolio

### 2.26.5 Figure:

### 2.26.6 Schema Fragment:

  portfolios).
</xsd:documentation>
</xsd:annotation>
</xsd:element>
</xsd:sequence>
<xsd:attribute name="id" type="xsd:ID"/>
</xsd:complexType>
```

## 2.27 PortfolioName

### 2.27.1 Description:

The data type used for portfolio names.

### 2.27.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type `xsd:normalizedString`)

### 2.27.3 Used by:

- Complex type: `PartyPortfolioName`

### 2.27.4 Derived Types:

### 2.27.5 Figure:

### 2.27.6 Schema Fragment:

```
<xsd:complexType name="PortfolioName">
  <xsd:annotation>

      <xsd:attribute name="id" type="xsd:ID"/>
      <xsd:attribute name="portfolioNameScheme" type="xsd:anyURI" />
    </xsd:extension>
  </xsd:simpleContent>
</xsd:complexType>
```

## 2.28 QueryParameter

### 2.28.1 Description:

A type representing criteria for defining a query portfolio. The criteria are made up of a QueryParameterId, QueryParameterValue and QueryParameterOperator.

### 2.28.2 Contents:

**queryParameterId** (exactly one occurrence; of the type QueryParameterId)

**queryParameterValue** (zero or one occurrence; of the type xsd:normalizedString)

**queryParameterOperator** (zero or one occurrence; of the type QueryParameterOperator)

### 2.28.3 Used by:

- Complex type: QueryPortfolio

### 2.28.4 Derived Types:

### 2.28.5 Figure:

### 2.28.6 Schema Fragment:

```
<xsd:complexType name="QueryParameter">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A type representing criteria for defining a query portfolio. The
      criteria are made up of a QueryParameterId, QueryParameterValue
      and QueryParameterOperator.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:sequence>
    <xsd:element name="queryParameterId" type="QueryParameterId"/>
    <xsd:element name="queryParameterValue" type="xsd:normalizedString" minOccurs="0"/>
    <xsd:element name="queryParameterOperator" type="QueryParameterOperator" minOccurs="0"/>
  </xsd:sequence>
</xsd:complexType>
```

## 2.29 QueryParameterId

### 2.29.1 Description:

A type representing an identifier for a parameter describing a query portfolio. An identifier can be anything from a product name like swap to a termination date.

### 2.29.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type xsd:normalizedString)

### 2.29.3 Used by:

- Complex type: QueryParameter

### 2.29.4 Derived Types:

### 2.29.5 Figure:

### 2.29.6 Schema Fragment:

```
<xsd:complexType name="QueryParameterId">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A type representing an identifier for a parameter describing a
      query portfolio. An identifier can be anything from a product
      name like swap to a termination date.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:simpleContent>
    <xsd:extension base="xsd:normalizedString">
      <xsd:attribute name="queryParameterIdScheme" type="xsd:anyURI" use="required"/>
      <xsd:attribute name="id" type="xsd:ID"/>
    </xsd:extension>
  </xsd:simpleContent>
</xsd:complexType>
```

## 2.30 QueryParameterOperator

### 2.30.1 Description:

A type representing an operator describing the relationship of a value to its corresponding identifier for a parameter describing a query portfolio. Possible relationships include equals, not equals, less than, greater than. Possible operators are listed in the queryParameterOperatorScheme.

### 2.30.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type xsd:normalizedString)

### 2.30.3 Used by:

- Complex type: QueryParameter

### 2.30.4 Derived Types:

### 2.30.5 Figure:

### 2.30.6 Schema Fragment:

```
<xsd:complexType name="QueryParameterOperator">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A type representing an operator describing the relationship of a
      value to its corresponding identifier for a parameter describing
      a query portfolio. Possible relationships include equals, not
      equals, less than, greater than. Possible operators are listed in
      the queryParameterOperatorScheme.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:simpleContent>
    <xsd:extension base="xsd:normalizedString">
      <xsd:attribute name="queryParameterOperatorScheme" type="xsd:anyURI" default="http://www.
      <xsd:attribute name="id" type="xsd:ID"/>
    </xsd:extension>
  </xsd:simpleContent>
</xsd:complexType>
```

## 2.31 QueryPortfolio

### 2.31.1 Description:

A type representing a portfolio obtained by querying the set of trades held in a repository. It contains trades matching the intersection of all criteria specified using one or more queryParameters or trades matching the union of two or more child queryPortfolios.

### 2.31.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type Portfolio)

- A type representing an arbitrary grouping of trade references.

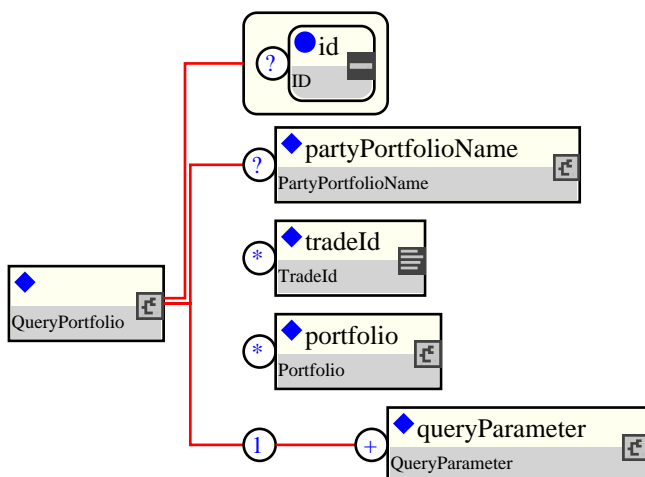

**queryParameter** (one or more occurrences; of the type QueryParameter)

### 2.31.3 Used by:

- Element: queryPortfolio

### 2.31.4 Derived Types:

### 2.31.5 Figure:

### 2.31.6 Schema Fragment:

```
<xsd:complexType name="QueryPortfolio">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A type representing a portfolio obtained by querying the set of
      trades held in a repository. It contains trades matching the
      intersection of all criteria specified using one or more
      queryParameters or trades matching the union of two or more child
      queryPortfolios.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:complexContent>
    <xsd:extension base="Portfolio">
      <xsd:sequence>
        <xsd:element name="queryParameter" type="QueryParameter" maxOccurs="unbounded"/>
      </xsd:sequence>
    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

## 2.32 Strategy

### 2.32.1 Description:

A type defining a group of products making up a single trade.

### 2.32.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type Product)

- The base type which all FpML products extend.

**premiumProductReference** (zero or one occurrence; of the type Reference) Indicates which product within a strategy represents the premium payment.

**product** (one or more occurrences; of the type Product) An abstract element used as a place holder for the substituting product elements.

### 2.32.3 Used by:

- Element: strategy

### 2.32.4 Derived Types:

### 2.32.5 Figure:

### 2.32.6 Schema Fragment:

```
<xsd:complexType name="Strategy">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A type defining a group of products making up a single trade.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:complexContent>
    <xsd:extension base="Product">
      <xsd:sequence>
        <xsd:element name="premiumProductReference" type="Reference" minOccurs="0">
          <xsd:annotation>
            <xsd:documentation xml:lang="en">
              Indicates which product within a strategy represents the
              premium payment.
            </xsd:documentation>
          </xsd:annotation>
        </xsd:element>
        <xsd:element ref="product" maxOccurs="unbounded"/>
      </xsd:sequence>
    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

## 2.33 Trade

### 2.33.1 Description:

A type defining an FpML trade.

### 2.33.2 Contents:

**tradeHeader** (exactly one occurrence; of the type TradeHeader) The information on the trade which is not product specific, e.g. trade date.

**product** (exactly one occurrence; of the type Product) An abstract element used as a place holder for the substituting product elements.

**otherPartyPayment** (zero or more occurrences; of the type Payment) Other fees or additional payments associated with the trade, e.g. broker commissions, where one or more of the parties involved are not principal parties involved in the trade.

**brokerPartyReference** (zero or more occurrences; of the type Reference) Identifies that party (or parties) that brokered this trade.

**calculationAgent** (zero or one occurrence; of the type CalculationAgent) The ISDA Calculation Agent responsible for performing duties associated with an optional early termination.

**calculationAgentBusinessCenter** (zero or one occurrence; of the type BusinessCenter) The city in which the office through which ISDA Calculation Agent is acting for purposes of the transaction is located.

**collateral** (zero or one occurrence; of the type Collateral) Defines collateral obligations of a Party

**documentation** (zero or one occurrence; of the type Documentation) Defines the definitions that govern the document and should include the year and type of definitions referenced, along with any relevant documentation (such as master agreement) and the date it was signed.

**governingLaw** (zero or one occurrence; of the type GoverningLaw) TBA

**allocations** (zero or one occurrence; of the type Allocations) "Short-form" representation of allocations in which the key block economics are stated once within the trade structure, and the allocation data is contained in this allocations structure.

**tradeSide** (zero or one occurrence; of the type TradeSide) The parties to the Trade are grouped into Trade Sides. Each Trade has as many as two sides. Each side is a buyer or receiver of each leg or stream.

    </xsd:extension>
  </xsd:simpleContent>
</xsd:complexType>
```

## 2.38 TradeSide

### 2.38.1 Description:

The parties to the trade form into sides. Each side has defined roles in the lifecycle of the trade fulfilled by parties. Each party role is given in the likely order they would be filled during the lifecycle of a trade.

### 2.38.2 Contents:

**orderer** (zero or one occurrence; of the type PartyRole) The Party placing the order. This could be a fund manager acting on behalf of a client, or a hedge fund acting on it's own behalf. This is the role with the investment discretion.

**introducer** (zero or one occurrence; of the type PartyRole) Party that can relay an order directly to the trading floor at a firm. This is potentially a different firm, but may be the same as that taking the order. In effect the introducer is the first dealer to take the order. The reason an introducing dealer may forward a trade is sometime because it doesn't have the capacity to execute effectively but does have the relationship with the Orderer. Introducing Party is an industry standard term. This is semantically equivalent to the FIX and ISO20022 Introducing Firm.

**executor** (zero or one occurrence; of the type PartyRole) The Party executing or striking the trade. Executing Party is an industry standard term. This is semantically equivalent to the FIX and ISO20022 Executing Firm or Trader.

**confirmer** (zero or one occurrence; of the type PartyRole) The party that undertakes the confirmation process for this Trade Side. The confirmer essentially manages the matching and affirmation of trades. This is often the creditor or is increasingly outsourced to service providers such as Swapsware.

**creditor** (exactly one occurrence; of the type PartyRole) The party whose name appears on the contract as being responsible for credit of the trade. This is the party in the Trade Side the credit risk is against. For example if a hedge fund was to trade in the name of it's prime broker, then the prime broker would be the creditor.

**calculator** (zero or one occurrence; of the type PartyRole) The calculator is the Party that calculates, negotiates, and agrees the values to be paid at each payment date.

**settler** (zero or one occurrence; of the type PartyRole) The Settler is the party that makes the payments. Increasingly this is a service that can be externalized from the other roles. An example of a settlement service provide is SwapClear.

**beneficiary** (zero or one occurrence; of the type PartyRole) The party that suffers the economic effect of the trade. This is usually referred to as the primary Principal in FIX and ISO20022 - which is slightly confusing in that there are potentially many Principapal/Agency relationships. The beneficiary may be distinct from the creditor - an example is a Hedge Fund trading in the name of it's Prime Broker.

**accountant** (zero or more occurrences; of the type PartyRole) The Accountants for the trade. There are potentially many accountants. This is known in FIX and ISO20022 for Collective Investment Vehicles as the Third Party Administrator (TPA), however all trades for all parties have at least one party accounting for the trade.

### 2.38.3 Used by:
