# ***1 Global Complex Types***

## 1.1 ValuationDocument

### 1.1.1 Description:

A type defining a content model that includes valuation (pricing and risk) data without expressing any processing intention.

### 1.1.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type DataDocument)

- A type defining a content model that is backwards compatible with older FpML releases and which can be used to contain sets of data without expressing any processing intention.

**market** (zero or more occurrences; of the type Market) This is a global element used for creating global types. It holds Market information, e.g. curves, surfaces, quotes, etc.

**valuationSet** (zero or more occurrences; of the type ValuationSet)

### 1.1.3 Used by:

### 1.1.4 Derived Types:

### 1.1.5 Figure:

### 1.1.6 Schema Fragment:

```
<xsd:complexType name="ValuationDocument">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A type defining a content model that includes valuation (pricing
      and risk) data without expressing any processing intention.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:complexContent>
    <xsd:extension base="DataDocument">
      <xsd:sequence>
        <xsd:element ref="market" minOccurs="0" maxOccurs="unbounded"/>
        <xsd:element ref="valuationSet" minOccurs="0" maxOccurs="unbounded"/>
      </xsd:sequence>
    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

## ***2 Global Elements***

## 2.1 FpML

### 2.1.1 Description:

The FpML element forms the root for any conforming FpML instance document. The actual structure of the document is determined by setting the 'type' attribute to an appropriate derived subtype of the complex type Document.

### 2.1.2 Contents:

Element FpML is defined by the complex type Document

### 2.1.3 Used by:

### 2.1.4 Substituted by:

### 2.1.5 Figure:

### 2.1.6 Schema Fragment:

```
<xsd:element name="FpML" type="Document">

# Table Of Contents

1	Business Process Examples	10
1.1	Introduction	10
1.2	General Messages	11
1.2.1	Example 3 - Portfolio Message	11
1.2.2	Example 21 - Credit Event Notice	11
1.2.3	Example 50 - Message Rejected	11
1.2.4	Example 90 - Trade Execution Date Time	11
1.3	Allocations	12
1.3.1	Example 19 - Long-Form Allocation of a Credit Default Swap	12
1.3.2	Example 20 - Short-Form Allocation of a Credit Default Swap	12
1.3.3	Example 22 - Allocation Created	12
1.3.4	Example 23 - Allocation Amendment	12
1.3.5	Example 24 - Allocation Cancelled	12
1.3.6	Example 25 - Request Allocation	12
1.4	Amendments	13
1.4.1	Example 15 - Credit Default Swap Request Amendment Confirmation	13
1.5	Cashflow Matching	14
1.5.1	Example 28 - Simple Cashflow Assertion	14
1.5.2	Example 29 - Asset Swap Cashflow Assertion	14
1.5.3	Example 30 - Interest Rate Cashflow Assertion	14
1.5.4	Example 31 - Interest Rate Match Result - A	14
1.5.5	Example 32 - Interest Rate Match Result - B	14
1.5.6	Example 33 - Interest Rate Match Result - C	14
1.5.7	Example 34 - Credit Default Cashflow Termination	14
1.5.8	Example 35 - Credit Default Coupon Payment	14
1.5.9	Example 36 - Credit Default Cash Flow Assertion	14
1.5.10	Example 37 - Credit Default Cashflow Match Result - A	14
1.5.11	Example 38 - Credit Default Cashflow Match Result - B	15
1.5.12	Example 39 - Credit Default Cashflow Match Result - C	15
1.5.13	Example 40 - Interest Rate Reset	15
1.5.14	Example 41 - Interest Rate Equity Reset	15
1.5.15	Example 42 - Interest Rate Equity Dividend Reset	15
1.5.16	Example 43 - Equity Swap Cashflow Partial Termination	15
1.5.17	Example 44 - Equity Swap Cashflow Partial Termination Match Results - A	15
1.5.18	Example 45 - Equity Swap Cashflow Partial Termination Match Results - B	15
1.5.19	Example 46 - Equity Swap Cashflow Partial Termination Match Results - C	16
1.5.20	Example 47 - Compounding Swap Cashflow Assertion	16
1.5.21	Example 48 - Cashflow Assertion: Initial Principal Exchange of a Cross-Currency Swap	16
1.5.22	Example 49 - Cashflow Assertion: Equity Option Premium	16
1.6	Confirmations	17
1.6.1	Example 1 - Request Trade Confirmation	17
1.6.2	Example 2 - Trade Confirmed	17
1.6.3	Example 5 - Equity Cash Share Request Confirmation	17
1.6.4	Example 6 - Equity Index Option Request Confirmation	17
1.6.5	Example 7 - Equity Physical Share Request Confirmation	17
1.7	Increases	18
1.7.1	Example 4 - Equity Option Increase	18
1.7.2	Example 12 - Credit Default Swap Request Increase Termination	18
1.8	Novations	19
1.8.1	Example 26 - Alleged Novation	19
1.8.2	Example 27 - Request Novation Consent	19
1.9	Party Roles and Accounts	20
1.9.1	Example 16 - FX Single Leg with multiple roles and accounts	20
1.9.2	Example 17 - Two sided swap with multiple roles and accounts	20
1.9.3	Example 18 - Credit Default Swap Short Form US Corporate with broker role	20
1.10	Terminations	21
1.10.1	Example 8 - Equity Option Partial Termination	21
1.10.2	Example 9 - Equity Option Termination	21
1.10.3	Example 10 - Equity Swap Partial Termination	21
1.10.4	Example 11 - Equity Swap Full Termination	21
1.10.5	Example 13 - Credit Default Swap Full Termination Confirmation	21

1.10.6	Example 14 - Credit Default Swap Partial Termination Confirmation	21
1.11	Contract Notifications	22
1.11.1	Example 51 - Contract Created	22
1.11.2	Example 52 - Contract Cancelled	22
1.11.3	Example 53 - Contract Novated	22
1.11.4	Example 54 - Contract Partial Termination	22
1.11.5	Example 55 - Contract Full Termination	22
1.11.6	Example 56 - Contract Increased	22
1.11.7	Example 91 - Contract Partial Termination Cancelled	22
1.11.8	Example 92 - Contract Partial Termination Cancelled	22
1.11.9	Example 93 - Contract Novated Cancelled	22
1.11.10	Example 94 - Contract Novated Cancelled	22
1.11.11	Example 95 - Contract Increased Cancelled	22
1.11.12	Example 96 - Contract Increased Cancelled	22
1.11.13	Example 97 - Contract Full Termination Cancelled	22
1.11.14	Example 98 - Contract Full Termination Cancelled	22
1.12	Portfolio Reconciliation	23
1.12.1	Scenario: Incremental Update	23
1.12.1.1	Example 57 - Positions Asserted	23
1.12.1.2	Example 58 - Positions Acknowledged	23
1.12.1.3	Example 59 - Positions Match Results	23
1.12.1.4	Example 60 - Positions Asserted	23
1.12.1.5	Example 61 - Positions Acknowledged	23
1.12.1.6	Example 62 - Positions Match Results	23
1.12.1.7	Example 63 - Positions Asserted	23
1.12.1.8	Example 64 - Positions Acknowledged	23
1.12.1.9	Example 65 - Positions Match Results	23
1.12.1.10	Example 66 - Positions Match Results	23
1.12.1.11	Example 67 - Positions Asserted	23
1.12.1.12	Example 68 - Positions Acknowledged	24
1.12.1.13	Example 69 - Positions Match Results	24
1.12.1.14	Example 70 - Positions Match Results	24
1.12.1.15	Example 71 - Positions Asserted	24
1.12.1.16	Example 72 - Portfolio Request	24
1.12.1.17	Example 73 - Position Report	24
1.12.1.18	Example 74 - Position Request	24
1.12.1.19	Example 75 - Position Report	24
1.12.2	Scenario: Snapshot	24
1.12.2.1	Example 76 - Positions Asserted	24
1.12.2.2	Example 77 - Positions Asserted	24
1.12.2.3	Example 78 - Positions Match Results	24
1.12.2.4	Example 79 - Positions Match Results	24
1.12.2.5	Example 80 - Positions Asserted	25
1.12.2.6	Example 81 - Positions Match Results	25
1.12.2.7	Example 82 - Positions Match Results	25
1.12.3	Scenario: Force Matched	25
1.12.3.1	Example 83 - Positions Asserted	25
1.12.3.2	Example 84 - Positions Asserted	25
1.12.3.3	Example 85 - Positions Match Results	25
1.12.3.4	Example 86 - Positions Match Results	25
1.12.3.5	Example 87 - Positions Asserted	25
1.12.3.6	Example 88 - Positions Match Results	25
1.12.3.7	Example 89 - Positions Match Results	25
2	Interest Rate Derivative Examples	26
2.1	Introduction	26
2.2	Example 1 - Fixed/Floating Single Currency Interest Rate Swap	27
2.3	Example 2 - Fixed/Floating Single Currency Interest Rate Swap with Initial Stub Period and Notional Amortization	28
2.4	Example 3 - Fixed/Floating Single Currency Interest Rate Swap with Compounding, Payment Delay and Final Rate Rounding	29
2.5	Example 4 - Fixed/Floating Single Currency Interest Rate Swap with Arrears Reset, Step-Up Coupon and Upfront Fee	30
2.6	Example 5 - Fixed/Floating Single Currency Interest Rate Swap with Long Initial Stub and Short Final Stub	

2.7	Example 6 - Fixed/Floating Cross Currency Interest Rate Swap	32
2.8	Example 7 - Fixed/Floating Overnight Interest Rate Swap (OIS)	33
2.9	Example 8 - Forward Rate Agreement	34
2.10	Example 9 - European Swaption, Physical Settlement, Explicit Underlying Effective Date	35
2.11	Example 10 - European Swaption, Physical Settlement, Relative Underlying Effective Date	36
2.12	Example 11 - European Swaption, Physical Settlement, Partial Exercise, Automatic Exercise	37
2.13	Example 12 - European Swaption, Cash Settlement, Swaption Straddle	38
2.14	Example 13 - European Swaption, Cash Settled, cashflows included	39
2.15	Example 14 - Bermuda Swaption, Physical Settlement.	40
2.16	Example 15 - American Swaption, Physical Settlement.	41
2.17	Example 16 - Fixed/Floating Single Currency IRS With Mandatory Early Termination.	42
2.18	Example 17 - Fixed/Floating Single Currency IRS With European Style Optional Early Termination.	43
2.19	Example 18 - Fixed/Floating Single Currency IRS With Bermuda Style Optional Early Termination, Cashflows + optionalEarlyTerminationAdjustedDates.	44
2.20	Example 19 - Fixed/Floating Single Currency IRS With American Style Optional Early Termination.	45
2.21	Example 20 - Fixed/Floating Single Currency IRS With European Cancelable Provision.	46
2.22	Example 21 - Fixed/Floating Single Currency IRS With European Extendible Provision.	47
2.23	Example 22 - Interest Rate Cap	48
2.24	Example 23 - Interest Rate Floor	49
2.25	Example 24 - Interest Rate Collar	50
2.26	Example 25 - Fixed/Floating IRS Where The Floating Stream Notional Is Reset Based On Prevailing Spot Exchange Rate	51
2.27	Example 26 - Example 25 - Fixed/Floating IRS Where The Floating Stream Notional Is Reset Based On Prevailing Spot Exchange Rate - Cashflows.	52
2.28	Example 27 - Inverse Floater	53
2.29	Example 28 - Bullet Payments	54
2.30	Example 29 - Swap with Non-Deliverable Settlement Provision	55
2.31	Example 30 - Compounding and Averaging Swap with Relative Dates	56
2.32	Example 31 - Swap with Non-Deliverable Settlement Provision	57
3	<b>Inflation Swaps Examples</b>	58
3.1	Introduction	58
3.2	Example 1 - Year-on-Year	59
3.3	Example 2 - Year-on-Year with Bond Reference	60
3.4	Example 3 - Year-on-Year Initial Level	61
3.5	Example 4 - Year-on-Year with Interpolation	62
3.6	Example 5 - Zero-Coupon	63
4	<b>Credit Derivative Examples</b>	64
4.1	<b>Credit Default Swap</b>	64
4.1.1	Example 1 - Asian Corporate, Long Form, Fixed Regular Payment Schedule	64
4.1.2	Example 2 - Asian Corporate, Short Form, Fixed Regular Payment Schedule	64
4.1.3	Example 3 - Australian Corporate, Long Form, Fixed Regular Payment Schedule	64
4.1.4	Example 4 - Australian Corporate, Short Form, Fixed Regular Payment Schedule	64
4.1.5	Example 5 - Emerging Markets Asian Corporate, Long Form, Fixed Regular Payment Schedule	64
4.1.6	Example 6 - Emerging Markets European Sovereign, Long Form, Fixed Regular Payment Schedule	64
4.1.7	Example 7 - European Corporate, Long Form, Fixed Regular Payment Schedule	65
4.1.8	Example 8 - European Corporate, Short Form, Fixed Regular Payment Schedule	65
4.1.9	Example 9 - European Sovereign, Long Form, Fixed Regular Payment Schedule	65
4.1.10	Example 10 - US Corporate, Long Form, Fixed Regular Payment Schedule	65
4.1.11	Example 11 - US Corporate, Short Form, Fixed Regular Payment Schedule	65
4.1.12	Example 12 - Emerging Markets Asian Sovereign, Long Form, Fixed Regular Payment Schedule	65
4.1.13	Example 13 - Asia Sovereign, Long Form, Fixed Regular Payment Schedule	65
4.1.14	Example 14 - Emerging Markets Latin American Corporate, Long Form, Fixed Regular Payment Schedule	65
4.1.15	Example 15 - Emerging Markets Latin American Sovereign, Long Form, Fixed Regular Payment Schedule	65
4.2	<b>Credit Default Swap Index</b>	66
4.2.1	Example 1 - CDX Example	66
4.2.2	Example 2 - iTraxx Example	66
4.2.3	Example 3 - iTraxx Contractual Supplement Example	66
4.2.4	Example 4 - CDS Index Tranche	66
4.3	<b>Credit Default Swap Basket</b>	67
4.3.1	Example 1 - CDS Basket	67
4.3.2	Example 2 - CDS Custom Basket	67

4.3.3	Example 3 - CDS Basket Tranche	67
4.4	Mortgage Derivatives	68
4.4.1	Example 1 - CDS on CMBS	68
4.4.2	Example 2 - CDS on RMBS	68
4.5	Loan Derivatives	69
4.5.1	Example 1 - CDS Loan Secured List	69
4.5.2	Example 2 - CDS Loan Reference Obligation	69
4.6	Credit Default Swap Option	70
4.6.1	Example 1 - CDS Option	70
4.6.2	Example 2 - CDS Option	70
4.6.3	Example 3 - CDX Index Option	70
4.6.4	Example 4 - iTraxx Index Option	70
4.7	Independent Amount	71
4.7.1	Example 1 - Independent Amount	71
4.8	Credit Event Notice	72
4.8.1	Example 1 - Credit Event Notice	72
5	Foreign Exchange Examples	73
5.1	Introduction	73
5.2	Example 1 - FX Spot	74
5.3	Example 2 - FX Spot 'Cross' (non-base currency) with Side Rates	75
5.4	Example 3 - FX Forward	76
5.5	Example 4 - FX Forward with specific Settlement Instructions	77
5.6	Example 5 - FX Forward identified as using standard settlement instructions	78
5.7	Example 6 - FX Forward with split settlement	79
5.8	Example 7 - Non-deliverable FX Forward	80
5.9	Example 8 - FX Swap	81
5.10	Example 9 - FX OTC Option - European exercise	82
5.11	Example 10 - FX OTC Option - American exercise	83
5.12	Example 11 - Non-deliverable FX OTC Option	84
5.13	Example 12 - FX OTC Barrier Option	85
5.14	Example 13 - FX OTC Double Barrier Option	86
5.15	Example 14 - FX OTC Digital/Binary Option -- Euro Binary	87
5.16	Example 15 - FX OTC Digital/Binary Option -- Euro Range Digital	88
5.17	Example 16 - FX OTC Digital/Binary Option -- One-Touch	89
5.18	Example 17 - FX OTC Digital/Binary Option -- No-Touch	90
5.19	Example 18 - FX OTC Digital/Binary Option -- Double One-Touch	91
5.20	Example 19 - FX OTC Digital/Binary Option -- Double No-Touch	92
5.21	Example 20 - FX OTC Average Rate Option with Parametric Schedule	93
5.22	Example 21 - FX OTC Average Rate Option with Specific Date Schedule	94
5.23	Example 22 - Straddle (sample usage of Strategy)	95
5.24	Example 23 - Delta Hedge (sample usage of Strategy)	96

# 1 Business Process Examples

## *1.1 Introduction*

This section contains example FpML documents for several message types related to different business processes. Each demonstrates how different message exchanges are modeled in FpML.

## **1.2 General Messages**

### **1.2.1 Example 3 - Portfolio Message**

File: msg-ex03-portfolio.xml

### **1.2.2 Example 21 - Credit Event Notice**

File: msg-ex21-credit-event-notice.xml

This example shows the representation of a Credit Event Notice as FpML message. This examples is the same as cdcen-ex01-credit-event-notice-message.xml available in the cd folder.

### **1.2.3 Example 50 - Message Rejected**

File: msg-ex50-message-rejected.xml

### **1.2.4 Example 90 - Trade Execution Date Time**

File: msg-ex90-trade-execution-date-time.xml

This example shows the representation of the trade execution date time, which is a requirement for MiFID.

## **1.3 Allocations**

### **1.3.1 Example 19 - Long-Form Allocation of a Credit Default Swap**

File: msg-ex19-cds-long-form-allocation-accounts.xml

This example shows a "long-form" representation of allocations for a Credit Default Swap. This means that the block and the allocated trades have a full FpML representation.

### **1.3.2 Example 20 - Short-Form Allocation of a Credit Default Swap**

File: msg-ex20-cds-short-form-allocation.xml

This example shows a "short-form" representation of allocations for a Credit Default Swap. This means that only the block trade has a full FpML representation. The allocated trades are described with parameters (percentage of notional, amount) contained in the allocations element

### **1.3.3 Example 22 - Allocation Created**

File: msg-ex22-cds-long-form-allocation-created.xml

This example shows an allocation being created with the AllocationCreated message. It also notes the beginning of a messaging thread between two parties.

### **1.3.4 Example 23 - Allocation Amendment**

File: msg-ex23-cds-long-form-allocation-amended.xml

This example shows a change to the allocation that was created in example 22. The AllocationAmended message continues a thread between two parties.

### **1.3.5 Example 24 - Allocation Cancelled**

File: msg-ex24-cds-long-form-allocation-cancelled.xml

This example shows the allocation created in example 22 being cancelled. The message thread between two parties.

### **1.3.6 Example 25 - Request Allocation**

File: msg-ex25-cds-request-allocation.xml

This examples shows the usage of the RequestAllocation message and a thread between two parties.

## ***1.4 Amendments***

### **1.4.1 Example 15 - Credit Default Swap Request Amendment Confirmation**

File: msg-ex15-cd-request-amendment-confirmation.xml

## **1.5 Cashflow Matching**

### **1.5.1 Example 28 - Simple Cashflow Assertion**

File: msg-ex28-cashflow-assertion-most-simple.xml

This example shows the usage of TradeCashflowsAsserted to describe a simple asserted cashflow. The minimal amount of information is specified: A single payment/currency pair and the buyer/seller party references.

### **1.5.2 Example 29 - Asset Swap Cashflow Assertion**

File: msg-ex29-cashflow-assertion-assetSwap.xml

Example of a cashflow assertion related to an asset swap. Features of this example include 3 underlying references: The fixed rate, the float rate and the bond reference.

### **1.5.3 Example 30 - Interest Rate Cashflow Assertion**

File: msg-ex30-cashflow-assertion-ird.xml

Example of a cashflow assertion related to an interest rate swap with vanilla fixed vs. float terms.

### **1.5.4 Example 31 - Interest Rate Match Result - A**

File: msg-ex31-cashflow-match-result-ird-01.xml

Example of a payment exposed cashflow match result message related to an interest rate swap with vanilla fixed vs. float terms.

### **1.5.5 Example 32 - Interest Rate Match Result - B**

File: msg-ex32-cashflow-match-result-ird-02.xml

Example of a mismatched cashflow match result message related to an interest rate swap with vanilla fixed vs. float terms.

### **1.5.6 Example 33 - Interest Rate Match Result - C**

File: msg-ex33-cashflow-match-result-ird-03.xml

Example of an unmatched cashflow match result message related to an interest rate swap with vanilla fixed vs. float terms.

### **1.5.7 Example 34 - Credit Default Cashflow Termination**

File: msg-ex34-cashflow-assertion-cds-Termination.xml

Example of a cashflow assertion related to the termination of a single name credit default swap. No calculation details are provided to explain how the termination fee has been calculated, as the market practice is to have it agreed on by the respective desks.

### **1.5.8 Example 35 - Credit Default Coupon Payment**

File: msg-ex35-cashflow-assertion-cds-Coupon.xml

Example of a cashflow assertion related to a single name credit default swap, with a fee leg reset cashflow.

### **1.5.9 Example 36 - Credit Default Cash Flow Assertion**

File: msg-ex36-cashflow-assertion-cds2.xml

Example of a cashflow assertion related to the standard quarterly payment on a single name credit default swap.

### **1.5.10 Example 37 - Credit Default Cashflow Match Result - A**

File: msg-ex37-cashflow-match-result-cds2-01.xml

Example of a successful cashflow match result message related to the standard quarterly payment on a single name credit default swap.

### 1.5.11 Example 38 - Credit Default Cashflow Match Result - B

File: msg-ex38-cashflow-match-result-cds2-02.xml

Example of an erroneous cashflow match result message related to the standard quarterly payment on a single name credit default swap.

### 1.5.12 Example 39 - Credit Default Cashflow Match Result - C

File: msg-ex39-cashflow-match-result-cds2-03.xml

Example of an unmatched cashflow match result message related to the standard quarterly payment on a single name credit default swap.

### 1.5.13 Example 40 - Interest Rate Reset

File: msg-ex40-cashflow-assertion-eqs-InterestReset.xml

Example of a cashflow assertion related to a single stock equity swap, with a net payment that has only one gross component: an interest reset.

### 1.5.14 Example 41 - Interest Rate Equity Reset

File: msg-ex41-cashflow-assertion-eqs-InterestEquityReset.xml

Example of a cashflow assertion related to a single stock equity swap, with a net payment that has only two gross components: an equity reset and an interest reset.

### 1.5.15 Example 42 - Interest Rate Equity Dividend Reset

File: msg-ex42-cashflow-assertion-eqs-InterestEquityDividendReset.xml

Example of a cashflow assertion related to a single stock equity swap, with a net payment that has three gross components: an equity reset, an interest reset and a dividend component.

In the case of the equity reset component of the combined reset, the calculation elements are limited to the number of units. The notional of the trade that has been used as a calculation basis for the accrual, i.e. the number of units (19,000) multiplied by the previous strike price (CAD 7.87).

### 1.5.16 Example 43 - Equity Swap Cashflow Partial Termination

File: msg-ex43-cashflow-assertion-eqs-PartialTermination.xml

Example of a cashflow assertion related to the partial termination of an equity swap that leads to a cashflow that has an equity, an interest rate and a dividend component. The notional stated here is the notional **resulting from** the partial termination.

The calculation details sections represent the equity PnL and the funding cost related to their portioned shares.

### 1.5.17 Example 44 - Equity Swap Cashflow Partial Termination Match Results - A

As part of these transactions, 6,948 shares were sold at a price of USD 42.6481, generating a cashflow that needs to be broken down across each of the purchased transactions in order to provide an appropriate explanation of the equity and funding PnL.

- 171 shares had been purchased on July 20th at a price of USD 40.9492
- 5,859 shares had been purchased on August 4th at a price of USD 42.6552
- 918 shares had been purchased on October 24 at a price of USD 38.1097

The approach consisted in having 7 calculation details sections: one for each equity and funding component, and one for the dividend component.

File: msg-ex44-cashflow-match-result-eqs-PartialTermination-01.xml

Example of a cashflow match result message related to an interest rate swap with vanilla fixed vs. float terms.

### 1.5.18 Example 45 - Equity Swap Cashflow Partial Termination Match Results - B

File: msg-ex45-cashflow-match-result-eqs-PartialTermination-02.xml

Example of a cashflow match result message related to an interest rate swap with vanilla fixed vs. float terms.

### **1.5.19 Example 46 - Equity Swap Cashflow Partial Termination Match Results - C**

File: msg-ex46-cashflow-match-result-eqs-PartialTermination-03.xml

Example of a cashflow match result message related to an interest rate swap with vanilla fixed vs. float terms.

### **1.5.20 Example 47 - Compounding Swap Cashflow Assertion**

File: msg-ex47-cashflow-assertion-CompoundingSwap.xml

Example of a cashflow assertion related to an interest rate swap with compounding interests on one of the legs. In this example, the fixed leg resets semi-annually.

### **1.5.21 Example 48 - Cashflow Assertion: Initial Principal Exchange of a Cross-Currency Swap**

File: msg-ex48-cashflow-assertion-XCcy-PrincipalExchange.xml

Example of a cashflow assertion related to the initial principal exchange of a cross-currency swap.

### **1.5.22 Example 49 - Cashflow Assertion: Equity Option Premium**

File: msg-ex49-cashflow-assertion-EquityOption.xml

Example of a cashflow assertion related to an equity option premium.

## **1.6 Confirmations**

### **1.6.1 Example 1 - Request Trade Confirmation**

File: msg-ex01-request-confirmation.xml

### **1.6.2 Example 2 - Trade Confirmed**

File: msg-ex02-trade-confirmed.xml

### **1.6.3 Example 5 - Equity Cash Share Request Confirmation**

File: msg-ex05-reqd-cash-share-request-confirmation.xml

### **1.6.4 Example 6 - Equity Index Option Request Confirmation**

File: msg-ex06-reqd-index-option-request-confirmation.xml

### **1.6.5 Example 7 - Equity Physical Share Request Confirmation**

File: msg-ex07-reqd-physical-share-request-confirmation.xml

## **1.7 Increases**

### **1.7.1 Example 4 - Equity Option Increase**

File: msg-ex04-eqd-option-increase.xml

### **1.7.2 Example 12 - Credit Default Swap Request Increase Termination**

File: msg-ex12-cd-request-increase-confirmation.xml

## **1.8 Novations**

### **1.8.1 Example 26 - Alleged Novation**

File: msg-ex26-alleged-novation.xml

This example shows the usage of the NovationAlleged message and a thread between two parties. The previous trade is a reference Credit Default Swap and the payment is a closeout between the outgoing and incoming parties.

### **1.8.2 Example 27 - Request Novation Consent**

File: msg-ex27-request-consent-novation.xml

This example shows the usage of the NovationConsentRequest message and a thread between the two parties in example 26. The entire CDS transaction being novated is exposed while the payment between the incoming and outgoing parties is removed.

## ***1.9 Party Roles and Accounts***

### **1.9.1 Example 16 - FX Single Leg with multiple roles and accounts**

File: msg-ex16-fx-single-leg-roles-accounts.xml

### **1.9.2 Example 17 - Two sided swap with multiple roles and accounts**

File: msg-ex17-two-sided-swap-roles-accounts.xml

This example shows a RequestTradeConfirmation message of a two sided swap trade with multiple roles and accounts.

### **1.9.3 Example 18 - Credit Default Swap Short Form US Corporate with broker role**

File: msg-ex18-cds-2003-short-us-corp-broker-role.xml

This example shows how to model a TradeConfirmed message of a trade with broker parties using the tradeSide structure instead of using the brokerPartyReference element.

## **1.10 Terminations**

### **1.10.1 Example 8 - Equity Option Partial Termination**

File: msg-ex08-eqd-option-partial-termination.xml

### **1.10.2 Example 9 - Equity Option Termination**

File: msg-ex09-eqd-option-termination.xml

### **1.10.3 Example 10 - Equity Swap Partial Termination**

File: msg-ex10-eqd-swap-partial-termination.xml

### **1.10.4 Example 11 - Equity Swap Full Termination**

File: msg-ex11-eqd-swap-full-termination.xml

### **1.10.5 Example 13 - Credit Default Swap Full Termination Confirmation**

File: msg-ex13-cd-request-full-termination-confirmation.xml

### **1.10.6 Example 14 - Credit Default Swap Partial Termination Confirmation**

File: msg-ex14-cd-request-partial-termination-confirmation.xml

## **1.11 Contract Notifications**

Examples to show the notification of contracts and post-trade events between asset managers and custodians.

### **1.11.1 Example 51 - Contract Created**

File: msg-ex51-contract-created.xml

### **1.11.2 Example 52 - Contract Cancelled**

File: msg-ex52-contract-cancelled.xml

### **1.11.3 Example 53 - Contract Novated**

File: msg-ex53-contract-novated.xml

### **1.11.4 Example 54 - Contract Partial Termination**

File: msg-ex54-contract-partial-termination.xml

### **1.11.5 Example 55 - Contract Full Termination**

File: msg-ex55-contract-full-termination.xml

### **1.11.6 Example 56 - Contract Increased**

File: msg-ex56-contract-increased.xml

### **1.11.7 Example 91 - Contract Partial Termination Cancelled**

File: msg-ex91-contract-partial-termination-cancelled.xml

### **1.11.8 Example 92 - Contract Partial Termination Cancelled**

File: msg-ex92-contract-partial-termination-cancelled.xml

### **1.11.9 Example 93 - Contract Novated Cancelled**

File: msg-ex93-contract-novated-cancelled.xml

### **1.11.10 Example 94 - Contract Novated Cancelled**

File: msg-ex94-contract-novated-cancelled.xml

### **1.11.11 Example 95 - Contract Increased Cancelled**

File: msg-ex95-contract-increased-cancelled.xml

### **1.11.12 Example 96 - Contract Increased Cancelled**

File: msg-ex96-contract-increased-cancelled.xml

### **1.11.13 Example 97 - Contract Full Termination Cancelled**

File: msg-ex97-contract-full-termination-cancelled.xml

### **1.11.14 Example 98 - Contract Full Termination Cancelled**

File: msg-ex98-contract-full-termination-cancelled.xml

## **1.12 Portfolio Reconciliation**

Examples to show the set of messages for portfolio reconciliation.

### **1.12.1 Scenario: Incremental Update**

#### **1.12.1.1 Example 57 - Positions Asserted**

1. ABC sends a single FX forward position to RECSERV, for new portfolio "fundPortfolio1".

File: msg-ex57-inc-update-1-positions-asserted.xml

#### **1.12.1.2 Example 58 - Positions Acknowledged**

2. RECSERV acknowledges the position.

File: msg-ex58-inc-update-2-positions-acknowledged.xml

#### **1.12.1.3 Example 59 - Positions Match Results**

3. RECSERV reports that the position is Unmatched, as there is no corresponding position from the other side.

File: msg-ex59-inc-update-3-match-results.xml

#### **1.12.1.4 Example 60 - Positions Asserted**

4. ABC sends a second position, a FRA, to RECSERV, for the same portfolio, and says that submissions are complete.

File: msg-ex60-inc-update-4-positions-asserted.xml

#### **1.12.1.5 Example 61 - Positions Acknowledged**

5. RECSERV acknowledges the position

File: msg-ex61-inc-update-5-positions-acknowledged.xml

#### **1.12.1.6 Example 62 - Positions Match Results**

6. RECSERV reports that the position is Unmatched, as there is no corresponding position from the other side.

File: msg-ex62-inc-update-6-match-results.xml

#### **1.12.1.7 Example 63 - Positions Asserted**

7. HEDGECO sends a single FX forward position to RECSERV, for new portfolio (from its point of view) "fundPortfolio1", and says that submissions are complete.

File: msg-ex63-inc-update-7-positions-asserted.xml

#### **1.12.1.8 Example 64 - Positions Acknowledged**

8. RECSERV acknowledges the position

File: msg-ex68-inc-update-12-positions-acknowledged.xml

#### **1.12.1.9 Example 65 - Positions Match Results**

9. RECSERV reports that the FX position is Mismatched and the FRA position is Unmatched to ABC, and identifies a proposed match and differences for the FX position.

File: msg-ex65-inc-update-9-match-results.xml

#### **1.12.1.10 Example 66 - Positions Match Results**

10. RECSERV reports that the FX position is Mismatched to HEDGECO, and identifies the proposed match and differences. It also reports that the FRA position is Alleged.

File: msg-ex66-inc-update-10-match-results.xml

#### **1.12.1.11 Example 67 - Positions Asserted**

11. ABC corrects the FX forward position to match that of HEDGECO, and removes the FRA.

File: msg-ex67-inc-update-11-position1-updated.xml

**1.12.1.12 Example 68 - Positions Acknowledged**

12. RECSERV acknowledges the updates to ABC.

File: msg-ex68-inc-update-12-positions-acknowledged.xml

**1.12.1.13 Example 69 - Positions Match Results**

13. RECSERV notifies ABC of the updated matching status.

File: msg-ex69-inc-update-13-match-results.xml

**1.12.1.14 Example 70 - Positions Match Results**

14. RECSERV notifies HEDGECO of the updated matching status.

File: msg-ex70-inc-update-14-match-results.xml

**1.12.1.15 Example 71 - Positions Asserted**

15. ABC reports a new valuation for the FX forward position on the next day.

File: msg-ex71-inc-update-15-positions-asserted.xml

**1.12.1.16 Example 72 - Portfolio Request**

16. ABC requests a portfolio listing

File: msg-ex72-inc-update-16-portfolio-requested.xml

**1.12.1.17 Example 73 - Position Report**

17. RECSERV reports fundPortfolio1 for 2006-04-26, which has 1 FX position.

File: msg-ex73-inc-update-17-positions-reported.xml

**1.12.1.18 Example 74 - Position Request**

18. ABC requests a position report with a listing of FX Spot/Forward involving GBP.

File: msg-ex74-inc-update-18-positions-requested.xml

**1.12.1.19 Example 75 - Position Report**

19. RECSERV reports GPB FX Spot/Forwards for 2006-04-26, which has 1 FX position.

File: msg-ex75-inc-update-19-positions-reported.xml

**1.12.2 Scenario: Snapshot****1.12.2.1 Example 76 - Positions Asserted**

1. HEDGECO sends a snapshot of positions (3), including a single FX forward position, FRA, and bullet Payment to RECSERV, for new portfolio "fundPortfolio33".

File: msg-ex76-snapshot-1-positions-asserted.xml

**1.12.2.2 Example 77 - Positions Asserted**

2. ABC sends a snapshot of positions (2), including a single FX forward position and a FRA to RECSERV, for a new portfolio "Portfolio99".

File: msg-ex77-snapshot-2-positions-asserted.xml

**1.12.2.3 Example 78 - Positions Match Results**

3. RECSERV sends matching results to HEDGECO stating that the FX forward position is matched, the FRA position is mismatched (identifying a potential match and differences), and the bullet payment position is unmatched (or pending unmatched) since the other side hasn't submitted this position yet.

File: msg-ex78-snapshot-3-positions-match-results.xml

**1.12.2.4 Example 79 - Positions Match Results**

4. RECSERV sends matching results to ABC stating that the FX forward position is matched, the FRA position is mismatched (identifying a potential match and differences), and that there is an alleged bullet payment

position from HEDGECO.

File: msg-ex79-snapshot-4-positions-match-results.xml

#### **1.12.2.5 Example 80 - Positions Asserted**

5. ABC sends an updated snapshot of positions (3), including a single FX forward position, FRA, and bullet payment to RECSERV, for an existing portfolio "Portfolio99".

File: msg-ex80-snapshot-5-positions-asserted-updated.xml

#### **1.12.2.6 Example 81 - Positions Match Results**

6. RECSERV sends matching results to HEDGECO stating that all positions are matched.

File: msg-ex81-snapshot-6-positions-match-results.xml

#### **1.12.2.7 Example 82 - Positions Match Results**

7. RECSERV sends matching results to ABC stating that all positions are matched.

File: msg-ex82-snapshot-7-positions-match-results.xml

### **1.12.3 Scenario: Force Matched**

#### **1.12.3.1 Example 83 - Positions Asserted**

1. HEDGECO sends a snapshot of positions (2), including a single FX forward position and FRA to RECSERV, for new portfolio "fundPortfolio33".

File: msg-ex83-force-1-positions-asserted.xml

#### **1.12.3.2 Example 84 - Positions Asserted**

2. ABC sends a snapshot of positions (2), including a single FX forward position and a FRA to RECSERV, for a new portfolio "Portfolio99".

File: msg-ex84-force-2-positions-asserted.xml

#### **1.12.3.3 Example 85 - Positions Match Results**

3. RECSERV sends matching results to HEDGECO stating that the FX forward position is matched, the FRA position is mismatched (identifying a potential match and differences).

File: msg-ex85-force-3-positions-match-results.xml

#### **1.12.3.4 Example 86 - Positions Match Results**

4. RECSERV sends matching results to ABC stating that the FX forward position is matched, the FRA position is mismatched (identifying a potential match and differences).

File: msg-ex86-force-4-positions-match-results.xml

#### **1.12.3.5 Example 87 - Positions Asserted**

5. ABC sends the same snapshot of positions (2), including a single FX forward position and a FRA for an existing portfolio "Portfolio99". However, it indicates that the FRA position is a "force" match.

File: msg-ex87-force-6-positions-asserted-force.xml

#### **1.12.3.6 Example 88 - Positions Match Results**

6. RECSERV sends matching results to HEDGECO stating that the FX forward is matched, the FRA is "force" matched.

File: msg-ex88-force-6-positions-match-results.xml

#### **1.12.3.7 Example 89 - Positions Match Results**

7. RECSERV sends matching results to ABC stating that the FX forward is matched, the FRA is "force" matched.

File: msg-ex89-force-7-positions-match-results.xml

## 2 Interest Rate Derivative Examples

### *2.1 Introduction*

This section contains twenty eight example FpML trades. Each example illustrates how different product features are modeled in FpML.

Example 5 shows the defaulted 'type' attributes as part of the sample document. This illustrates the additional content model information available to a validating parser when processing an FpML document.

The sample xml document are available for download from the [fpml.org](http://fpml.org) website.

## **2.2 Example 1 - Fixed/Floating Single Currency Interest Rate Swap**

File: ird-ex01-vanilla-swap.xml

On 12 December, 1994 Chase New York and Barclays Bank London enter into an ISDA swap agreement with each other. The terms of the contract are:

- Effective Date: 14 December, 1994
- Termination Date: 14 December, 1999
- Notional Amount: EUR 50,000,000
- Chase pays the floating rate every 6 months, based on 6-month EUR-LIBOR-BBA, on an ACT/360 basis
- Barclays pays the 6% fixed rate every year on a 30E/360 basis
- The swap is non compounding, non amortizing and there are no stub periods. There is no averaging of rates. The business day convention for adjusting the calculation dates is the same as that used for payment date adjustments.

Note the following:

- Optional cashflows are not included in this example

## **2.3 Example 2 - Fixed/Floating Single Currency Interest Rate Swap with Initial Stub Period and Notional Amortization**

File: ird-ex02-stub-amort-swap.xml

The swap contract is identical to Example 1 except that there is an initial stub period and the notional amortizes.

The rate for the stub period is the linear interpolation between the 4-month and 5-month EUR-LIBOR-BBA rates.

The stub period on the floating stream runs from 16 January, 1995 to 14 June, 1995, and on the fixed stream from 16 January, 1995 to 14 December, 1995.

The notional amount is decreased by EUR 10,000,000 each year.

Note the following:

- Optional cashflows are included. An assumption that all weekdays are good business days has been made in calculating the adjusted dates in the cashflows

## **2.4 Example 3 - Fixed/Floating Single Currency Interest Rate Swap with Compounding, Payment Delay and Final Rate Rounding**

File: ird-ex03-compound-swap.xml

On 25 April, 2000 Morgan Stanley Dean Witter and JPMorgan enter into an ISDA swap agreement with each other. The terms of the contract are:

- Effective Date: 27 April, 2000
- Termination Date: 27 April, 2002
- Notional Amount: USD 100,000,000
- JPMorgan pays the 5.85% fixed rate semi-annually on a 30/360 basis.
- Morgan Stanley Dean Witter pays the floating rate semi-annually, based on 3-month USD-LIBOR-BBA reset and compounded flat quarterly, on an ACT/360 basis. The compounded rate to be used for calculating each floating payment amount will be rounded to the nearest 5 decimal places. Note how a percentage rate rounding of 5 decimal places is expressed as a rounding precision of 7 in the FpML document since the percentage is expressed as a decimal, e.g. 9.876543% (or 0.09876543) being rounded to the nearest 5 decimal places is 9.87654% (or 0.0987654)
- The business day convention for adjusting the calculation dates is the same as that used for payment date adjustments. There is a payment delay of 5 business days.

Note the following:

- Optional cashflows are included. An assumption that all weekdays are good business days has been made in calculating the adjusted dates in the cashflows
- The floatingRateIndexScheme refers to the 1998 Supplement to the 1991 ISDA Definitions.

## **2.5 Example 4 - Fixed/Floating Single Currency Interest Rate Swap with Arrears Reset, Step-Up Coupon and Upfront Fee**

File: ird-ex04-arrears-stepup-fee-swap.xml

On 25 April, 2000 Morgan Stanley Dean Witter and JPMorgan enter into an ISDA swap agreement with each other. The terms of the contract are:

- Effective Date: 27 April, 2000
- Termination Date: 27 April, 2002
- Notional amount: USD 100,000,000
- JPMorgan pays a 6.0% fixed rate semi-annually on a 30/360 basis for the first year and a fixed rate of 6.5% for the final year
- Morgan Stanley Dean Witter pays the floating rate quarterly, based on 3-month USD-LIBOR-BBA reset in arrears, on an ACT/360 basis
- There is no adjustment to period end dates on the fixed stream, i.e. the business day convention used for adjusting the payment dates does not apply for adjusting the calculation dates
- There is an upfront fee of USD 15,000 payable by Morgan Stanley Dean Witter to JPMorgan on the Effective Date.

Note the following:

- Optional cashflows are not included in this example
- The floatingRateIndexScheme refers to the 1998 Supplement to the 1991 ISDA Definitions.

## **2.6 Example 5 - Fixed/Floating Single Currency Interest Rate Swap with Long Initial Stub and Short Final Stub**

File: ird-ex05-long-stub-swap.xml

On 3 April, 2000 Chase and UBS Warburg enter into an ISDA swap agreement with each other. The terms of the contract are:

- Effective Date: 5 April, 2000
- Termination Date: 5 January, 2005
- Notional Amount: EUR 75,000,000
- Chase pays the floating rate every 6 months, based on 6-month EUR-EURIBOR-Telerate plus 10 basis points spread, on an ACT/360 basis
- UBS Warburg pays the 5.25% fixed rate every year on a 30/360 basis
- There is a long initial stub period of 7 months. The first period runs from 5 March, 2000 to 5 October, 2000 and an initial stub rate of 5.125% has been agreed for this period on the floating stream
- There is a short final stub period of 3 months. The final period runs from 5 October, 2004 to 5 January, 2005 and the 3-month EUR-EURIBOR-Telerate rate will be used for this period on the floating stream
- The business day convention for adjusting the calculation dates is the same as that used for payment date adjustments.

Note the following:

- The optional cashflows are not shown in this example
- This example shows the defaulted 'type' attributes to illustrate the additional content model information available to a validating parser. Whilst it is not invalid to include this information in the XML document instance, it is not recommended to do so, as any inconsistencies between the type information specified in the document and that in the DTD will result in a well formed but invalid FpML document
- The floatingRateIndexScheme refers to the 1998 ISDA Euro Definitions.

## **2.7 Example 6 - Fixed/Floating Cross Currency Interest Rate Swap**

File: ird-ex06-xccy-swap.xml

On 12 December, 1994 Chase New York and Barclays Bank London enter into an ISDA cross-currency swap agreement with each other. The terms of the contract are:

- Effective Date: 14 December, 1994
- Termination Date: 14 December, 1999
- Chase pays the floating rate every 6 months, based on 6-month USD-LIBOR-BBA, on USD 10,000,000 and an ACT/360 basis
- Barclays pays the 6% fixed rate every year on JPY 1,000,000,000 and a 30E/360 basis
- The swap is non compounding, non amortizing and there are no stub periods. There is no averaging of rates. The business day convention for adjusting the calculation dates is the same as that used for payment date adjustments.

Note the following:

- This example is identical to the MT361 Example 1 message in the S.W.I.F.T. User Handbook (Page 477, Category 3 - Treasury Markets - Foreign Exchange, Money Markets and Derivatives - October 1998 Standards Release - August 1998 Edition)
- Optional cashflows are included. An assumption that all weekdays are good business days has been made in calculating the adjusted dates in the cashflows
- The floatingRateIndexScheme refers to the 1991 ISDA Definitions.

## 2.8 Example 7 - Fixed/Floating Overnight Interest Rate Swap (OIS)

File: ird-ex07-ois-swap.xml

On 25 January, 2001 Citibank and Mizuho Capital enter into an ISDA swap agreement with each other. The terms of the contract are:

- Effective Date: 29 January, 2001
- Termination Date: 29 April, 2001
- Notional Amount: EUR 100,000,000
- Citibank makes a single floating rate payment at maturity based on the self-compounding floating rate index EUR-EONIA-OIS-COMPOUND, on an ACT/360 basis. The payment is delayed by one TARGET settlement day
- Mizuho Capital makes a single fixed rate payment at maturity based on a fixed rate of 5.1%, on an ACT/360 basis. The payment is delayed by one TARGET settlement day.

Note the following:

- Optional cashflows are not included in this example
- The floatingRateIndexScheme refers to the 2000 ISDA Definitions
- The calculationPeriodFrequency, paymentFrequency and resetFrequency are all specified as 'Term' since payments on the fixed and floating streams occur only at maturity and there is a single calculation period. The rollConvention is specified as 'None'
- The floating rate reset date is the last day of the calculation period. The ISDA definition of the OIS floating rate index provides for the compounding of the overnight deposit rates to occur in the process of arriving at the floating rate. There is no need to specify compounding of the rate separately, i.e. calculationPeriodFrequency and paymentFrequency are the same and no compoundingMethod is specified
- The fixing date is equal to the reset date
- There is no indexTenor (designated maturity) specified for the OIS floating rate index
- The calculation agent is Citibank.

## **2.9 Example 8 - Forward Rate Agreement**

File: ird-ex08-fra.xml

On 14 May, 1991 ABN AMRO Bank and Midland Bank enter a Forward Rate Agreement in which ABN AMRO is the seller of the notional contract amount and Midland the buyer. The terms of the contract are:

- Effective Date: 17 July, 1991
- Termination Date: 17 January, 1992
- Notional Amount: CHF 25,000,000
- Fixed Rate: 4.0%
- Day Count Fraction: Actual/360

Note the following:

- This example is identical to the MT340 Example message in the S.W.I.F.T. User Handbook (Page 243, Category 3 - Treasury Markets - Foreign Exchange, Money Markets and Derivatives - October 1998 Standards Release - August 1998 Edition).
- The floatingRateIndexScheme refers to the 1991 ISDA Definitions.

## **2.10 Example 9 - European Swaption, Physical Settlement, Explicit Underlying Effective Date**

File: ird-ex09-euro-swaption-explicit.xml

On 30 August, 2000 Party buys from PartyB an option to exercise into an underlying ISDA swap. The terms of the contract are:

- PartyA pays to partyB a premium of EUR 100000, on 30 August, 2000.
- The Option Expires on 28th August, 2001.
- The Option should be exercised no earlier than 09:00 hours Brussels time, and no later than 11:00 hours Brussels time
- Follow-up confirmation of the exercise decision is required.
- Effective Date of the Underlying Swap: 30 August, 2001
- Termination Date of the Underlying Swap: 30 August, 2006
- Notional on the Underlying Swap Amount: EUR 100,000,000
- Should the option be exercised, PartyA makes semi-annual floating rate payments based on the floating rate index EUR-EURIBOR-Telerate, on an ACT/360 basis.
- Should the option be exercised, PartyB makes annual fixed rate payments based on a fixed rate of 5.0%, on an 30/360 basis.

Note the following:

- The Calculation agent is partyB
- The notification party is partyB, i.e. it is to partyB that notice of exercise must be given.
- The Swap is not specified with cashflows.
- The options settles physically.
- The effective date of the underlying swap is explicitly set as 30 August, 2001 by virtue of the fact that there is no relevantUnderlyingDate element set.

## **2.11 Example 10 - European Swaption, Physical Settlement, Relative Underlying Effective Date**

File: ird-ex10-euro-swaption-relative.xml

On 30 August, 2000 Party buys from PartyB an option to exercise into an underlying ISDA swap. The terms of the contract are:

- PartyA pays to partyB a premium of EUR 100000, on 30 August, 2000.
- The Option Expires on 28th August, 2001.
- The Option should be exercised no earlier than 09:00 hours Brussels time, and no later than 11:00 hours Brussels time
- Follow-up confirmation of the exercise decision is required.
- Effective Date of the Underlying Swap is defined as being 2 days after the Exercise Date.
- Termination Date of the Underlying Swap: 30 August, 2006
- Notional on the Underlying Swap Amount: EUR 100,000,000
- Should the option be exercised, PartyA makes semi-annual floating rate payments based on the floating rate index EUR-EURIBOR-Telerate, on an ACT/360 basis.
- Should the option be exercised, PartyB makes annual fixed rate payments based on a fixed rate of 5.0%, on an 30/360 basis.

## **2.12 Example 11 - European Swaption, Physical Settlement, Partial Exercise, Automatic Exercise**

File: example11-euro-swaption-partial-auto-ex.xml

On 30 August, 2000 Party buys from PartyB an option to exercise into an underlying ISDA swap. The terms of the contract are:

- PartyA pays to partyB a premium of EUR 100000, on 30 August, 2000.
- The Option Expires on 28th August, 2001.
- The option is exercised automatically where the threshold rate for exercise is set as 2 basis points.
- There is allowance for partial exercise, where the minimum notional amount is EUR 50,000,000 increasing in multiples of EUR 10,000,000.
- Effective Date of the Underlying Swap: 30 August 2001.
- Termination Date of the Underlying Swap: 30 August, 2006
- Notional on the Underlying Swap Amount: EUR 100,000,000
- Should the option be exercised, PartyA makes semi-annual floating rate payments based on the floating rate index EUR-EURIBOR-Telerate, on an ACT/360 basis.
- Should the option be exercised, PartyB makes annual fixed rate payments based on a fixed rate of 5.0%, on an 30/360 basis.

## **2.13 Example 12 - European Swaption, Cash Settlement, Swaption Straddle**

File: ird-ex12-euro-swaption-straddle-cash.xml

On 30 August, 2000 Party buys from PartyB an option to exercise into an underlying ISDA swap. The terms of the contract are:

- PartyA pays to partyB a premium of EUR 100000, on 30 August, 2000.
- The Option Expires on 28th August, 2001.
- The Option should be exercised no earlier than 09:00 hours Brussels time, and no later than 11:00 hours Brussels time
- The exercise, settlement is made in cash with valuation being performed using the yield curve unadjusted method (rate source - ISDA, rate type - Mid).
- Follow-up confirmation of the exercise decision is required.
- Effective Date of the Underlying Swap: 30 August, 2001
- Termination Date of the Underlying Swap: 30 August, 2006
- Notional on the Underlying Swap Amount: EUR 100,000,000
- The Option held is a straddle, therefore, on exercise, PartyA will either
- Make semi-annual floating rate payments based on the floating rate index EUR-EURIBOR-Telerate, on an ACT/360 basis, and receive annual fixed rate payments based on a fixed rate of 5.0%, on an 30/360 basis.
- or
- Make annual fixed rate payments based on a fixed rate of 5.0%, on an 30/360 basis and receive semi-annual floating rate payments based on the floating rate index EUR-EURIBOR-Telerate, on an ACT/360 basis.

## **2.14 Example 13 - European Swaption, Cash Settled, cashflows included**

File: ird-ex13-euro-swaption-cash-with-cfs.xml

On 30 August, 2000 Party buys from PartyB an option to exercise into an underlying ISDA swap. The terms of the contract are:

- PartyA pays to partyB a premium of EUR 100000, on 30 August, 2000.
- The Option Expires on 28th August, 2001.
- The Option should be exercised no earlier than 09:00 hours Brussels time, and no later than 11:00 hours Brussels time
- The exercise, settlement is made in cash with valuation being performed using the yield curve unadjusted method (rate source - ISDA, rate type - Mid).
- Follow-up confirmation of the exercise decision is required.
- Effective Date of the Underlying Swap: 30 August, 2001
- Termination Date of the Underlying Swap: 30 August, 2006
- Notional on the Underlying Swap Amount: EUR 100,000,000
- Should the option be exercised, PartyA makes semi-annual floating rate payments based on the floating rate index EUR-EURIBOR-Telerate, on an ACT/360 basis.
- Should the option be exercised, PartyB makes annual fixed rate payments based on a fixed rate of 5.0%, on an 30/360 basis.

Note the following:

- The Calculation agent is partyB
- The swaption is specified with its adjusted exercise date.
- The Swap is specified with cashflows included

## **2.15 Example 14 - Bermuda Swaption, Physical Settlement.**

File: ird-ex14-berm-swaption.xml

On 30 August, 2000 Party buys from PartyB an option to exercise into an underlying ISDA swap. The terms of the contract are:

- PartyA pays to partyB a premium of EUR 100000, on 30 August, 2000.
- The Option can be exercised the following dates: 28 December, 2000, 28 April, 2000 or 28 August, 2000
- The Option should be exercised on these dates no earlier than 09:00 hours Brussels time, and no later than 11:00 hours Brussels time
- Follow-up confirmation of the exercise decision is required.
- Effective Date of the Underlying Swap: 30 August, 2001
- Termination Date of the Underlying Swap: 30 August, 2006
- Notional on the Underlying Swap Amount: EUR 100,000,000
- Should the option be exercised, PartyA makes semi-annual floating rate payments based on the floating rate index EUR-EURIBOR-Telerate, on an ACT/360 basis.
- Should the option be exercised, PartyB makes annual fixed rate payments based on a fixed rate of 5.0%, on an 30/360 basis.

Note the following:

- The Calculation agent is partyB
- The options settles physically.

## **2.16 Example 15 - American Swaption, Physical Settlement.**

File: ird-ex15-amer-swaption.xml

On 30 August, 2000 Party buys from PartyB an option to exercise into an underlying ISDA swap. The terms of the contract are:

- PartyA pays to partyB a premium of EUR 100000, on 30 August, 2000.
- The Option can be exercised on any date from 30 August 2000 to 30 August 2002.
- The Option should be exercised on these dates no earlier than 09:00 hours Brussels time, and no later than 11:00 hours Brussels time
- Follow-up confirmation of the exercise decision is required.
- Effective Date of the Underlying Swap will be 2 days after the exercise date.
- Termination Date of the Underlying Swap: 30 August, 2006
- Notional on the Underlying Swap Amount: EUR 100,000,000
- Should the option be exercised, PartyA makes semi-annual floating rate payments based on the floating rate index EUR-EURIBOR-Telerate, on an ACT/360 basis.
- Should the option be exercised, PartyB makes annual fixed rate payments based on a fixed rate of 5.0%, on an 30/360 basis.

Note the following:

- The Calculation agent is partyB
- The options settles physically.

## **2.17 Example 16 - Fixed/Floating Single Currency IRS With Mandatory Early Termination.**

File: ird-ex16-mand-term-swap.xml

On 30 August, 2000 PartyA and PartyB agree to enter into an ISDA swap with early termination provision. The terms of the contract are:

- Effective Date of the Swap: 30 August 2001.
- Termination Date of the Underlying Swap: 30 August, 2006
- Notional on the Underlying Swap Amount: EUR 100,000,000
- PartyA makes semi-annual floating rate payments based on the floating rate index EUR-EURIBOR-Telerate, on an ACT/360 basis.
- PartyB makes annual fixed rate payments based on a fixed rate of 5.0%, on an 30/360 basis.
- The will terminate on the 30 August 2001.
- Cash settlement will be made on this date with valuation taking place 2 days prior to settlement at 11:00 hours (Brussels time).
- The Swap will be valued at this lime using the cash-price method

Note the following:

- The partyA and partyB are joint calculation agents

## **2.18 Example 17 - Fixed/Floating Single Currency IRS With European Style Optional Early Termination.**

File: ird-ex17-opt-euro-term-swap.xml

On 30 August, 2000 PartyA and PartyB agree to enter into an ISDA swap with early termination provision. The terms of the contract are:

- Effective Date of the Swap: 30 August 2001.
- Termination Date of the Underlying Swap: 30 August, 2006
- Notional on the Underlying Swap Amount: EUR 100,000,000
- PartyA makes semi-annual floating rate payments based on the floating rate index EUR-EURIBOR-Telerate, on an ACT/360 basis.
- PartyB makes annual fixed rate payments based on a fixed rate of 5.0%, on an 30/360 basis.
- The partyA has a chance to terminate the swap early - cash-settling on 30 August 2001. Notification of this needs to be given 5 days prior to this date after 9:00 hours (Brussels time) and not after (11:00 hours Brussels time)
- Cash settlement will be made on this date with valuation taking place 2 days prior to settlement at 11:00 hours (Brussels time).
- The Swap will be valued at this time using the cash-price method

## **2.19 Example 18 - Fixed/Floating Single Currency IRS With Bermuda Style Optional Early Termination, Cashflows + optional Early Termination Adjusted Dates.**

File: ird-ex18-opt-berm-term-swap.xml

On 30 August, 2000 PartyA and PartyB agree to enter into an ISDA swap with early termination provision. The terms of the contract are:

- Effective Date of the Swap: 30 August 2001.
- Termination Date of the Underlying Swap: 30 August, 2006
- Notional on the Underlying Swap Amount: EUR 100,000,000
- PartyA makes semi-annual floating rate payments based on the floating rate index EUR-EURIBOR-Telerate, on an ACT/360 basis.
- PartyB makes annual fixed rate payments based on a fixed rate of 5.0%, on an 30/360 basis.
- The partyA has a chance to terminate the swap early - cash-settling either 30 August 2003, or 30 August 2004. Notification of this needs to be given 5 days prior to this date after 9:00 hours (Brussels time) and not after (11:00 hours Brussels time)
- Cash settlement will be made on this date with valuation taking place 2 days prior to settlement at 11:00 hours (Brussels time).
- The Swap will be valued at this time using the cash-price method

Note the following:

- The swap is defined with cashflows.

## **2.20 Example 19 - Fixed/Floating Single Currency IRS With American Style Optional Early Termination.**

File: ird-ex19-opt-amer-term-swap.xml

On 30 August, 2000 PartyA and PartyB agree to enter into an ISDA swap with early termination provision. The terms of the contract are:

- Effective Date of the Swap: 30 August 2001.
- Termination Date of the Underlying Swap: 30 August, 2011
- Notional on the Underlying Swap Amount: EUR 100,000,000
- PartyA makes semi-annual floating rate payments based on the floating rate index EUR-EURIBOR-Telerate, on an ACT/360 basis.
- PartyB makes annual fixed rate payments based on a fixed rate of 5.0%, on an 30/360 basis.
- The partyA has a chance to terminate the swap early - cash-settling any time between 30 August 2001 and 30 August 2006. Notification of this needs to be given 5 days prior to this date after 9:00 hours (Brussels time) and not after (11:00 hours Brussels time)
- Cash settlement will be made on this date with valuation taking place 2 days prior to settlement at 11:00 hours (Brussels time).
- The Swap will be valued at this time using the cash-price method

## **2.21 Example 20 - Fixed/Floating Single Currency IRS With European Cancelable Provision.**

File: ird-ex20-euro-cancel-swap.xml

On 30 August, 2000 PartyA and PartyB agree to enter into an ISDA swap with Cancelable provision. The terms of the contract are:

- Effective Date of the Swap: 30 August 2001.
- Termination Date of the Underlying Swap: 30 August, 2011
- Notional on the Underlying Swap Amount: EUR 100,000,000
- PartyB makes semi-annual floating rate payments based on the floating rate index EUR-EURIBOR-Telerate, on an ACT/360 basis.
- PartyA makes annual fixed rate payments based on a fixed rate of 5.0%, on an 30/360 basis.
- The partyB has a chance to cancel the swap after five years (30 August 2006) giving notification 15 days prior to this date after 9:00 hours (Brussels time) and not after (11:00 hours Brussels time)

## **2.22 Example 21 - Fixed/Floating Single Currency IRS With European Extendible Provision.**

File: ird-ex21-euro-extend-swap.xml

On 30 August, 2000 PartyA and PartyB agree to enter into an ISDA swap with Extendible provision. The terms of the contract are:

- Effective Date of the Swap: 30 August 2001.
- Termination Date of the Underlying Swap: 30 August, 2006
- Notional on the Underlying Swap Amount: EUR 100,000,000
- PartyB makes semi-annual floating rate payments based on the floating rate index EUR-EURIBOR-Telerate, on an ACT/360 basis.
- PartyA makes annual fixed rate payments based on a fixed rate of 5.0%, on an 30/360 basis.
- The partyA has a chance to extend the swap after five years (30 August 2006) giving notification 15 days prior to this date after 9:00 hours (Brussels time) and not after (11:00 hours Brussels time). If extended, the swap will continue until 30 August 2011

## **2.23 Example 22 - Interest Rate Cap**

File: ird-ex22-cap.xml

On 29 April, 2001 PartyA sells to PartyB an interest rate cap. The terms of the contract are:

- Effective Date of the Cap: 30 June 2001.
- Termination Date of the Cap: 30 June, 2006
- Notional Amount: EUR 100,000,000
- PartyA sells partyB a stepped cap (initial rate of 6%) on semi-annual floating rate payments based on the floating rate index EUR-EURIBOR-Telerate, on an ACT/360 basis (partyA being the payer of the floating rate).

Note the following:

- The cap rate schedule defines annual 'step up' intervals hence keeping the same strike for 2 successive caplets.

## **2.24 Example 23 - Interest Rate Floor**

File: ird-ex23-floor.xml

On 29 April, 2001 PartyA sells to PartyB an interest rate floor. The terms of the contract are:

- Effective Date of the Floor: 30 June 2001.
- Termination Date of the Floor: 30 June, 2006
- Notional Amount: EUR 100,000,000
- PartyA sells partyB a stepped floor (initial floor rate of 4%) on semi-annual floating rate payments based on the floating rate index EUR-EURIBOR-Telerate, on an ACT/360 basis (partyA being the payer of the floating rate).

Note the following:

- The floor rate schedule defines annual 'step up' intervals hence keeping the same strike for 2 successive floorlets.

## **2.25 Example 24 - Interest Rate Collar**

File: ird-ex24-collar.xml

On 29 April, 2001 PartyB sells to PartyA an interest rate collar (PartyA buys a cap and sells a floor). The terms of the contract are:

- Effective Date of the Collar: 30 June 2001.
- Termination Date of the Collar: 30 June, 2006
- Notional Amount: EUR 100,000,000
- PartyA buys a stepped cap (initial cap rate of 6%) and partyA sells a stepped floor (initial floor rate of 4%) on semi-annual floating rate payments based on the floating rate index EUR-EURIBOR-Telerate, on an ACT/360 basis.

Note the following:

- The cap and floor rate schedule defines annual 'step up' intervals hence keeping the same strike for 2 successive caplets/floorlets.

## **2.26 Example 25 - Fixed/Floating IRS Where The Floating Stream Notional Is Reset Based On Prevailing Spot Exchange Rate**

File: ird-ex25-fxnotional-swap.xml

On 9 January, 2001 PartyA and PartyB agree to enter into an FX Resetting interest rate swap. The terms of the contract are:

- Effective Date of the Swap: 11 January 2006.
- Termination Date of the Underlying Swap: 11 January, 2011
- PartyB makes semi-annual fixed rate payments based on a fixed rate of 1.0%, on an ACT/360-Fixed basis.
- Notional on the fixed leg of the Swap: JPY 100,000,000
- PartyA makes quarterly floating rate payments based on the floating rate index USD-LIBOR-BBA, on an ACT/360 basis.
- Notional on the floating leg of the swap has a Ccy of USD and is FX Linked to the fixed leg JPY notional. The conversion rate for each cashflow is that observed on payment day at 17:00 hours from the Bank of Japan information source.

## **2.27 Example 26 - Example 25 - Fixed/Floating IRS Where The Floating Stream Notional Is Reset Based On Prevailing Spot Exchange Rate - Cashflows.**

File: ird-ex26-fsnotional-swap-with-cfs.xml

On 9 January, 2001 PartyA and PartyB agree to enter into a forward starting FX Resetting interest rate swap. The terms of the contract are:

- Effective Date of the Swap: 11 January, 2006.
- Termination Date of the Underlying Swap: 11 January, 2001
- PartyB makes semi-annual fixed rate payments based on a fixed rate of 1.0%, on an ACT/360-Fixed basis.
- Notional on the fixed leg of the Swap: JPY 100,000,000
- PartyA makes quarterly floating rate payments based on the floating rate index USD-LIBOR-BBA, on an ACT/360 basis.
- Notional on the floating leg of the swap has a Ccy of USD and is FX Linked to the fixed leg JPY notional. The conversion rate for each cashflow is that observed on payment day at 17:00 hours from the Bank of Japan information source.

Things to note:

- The Swap stream is defined with cashflows

## **2.28 Example 27 - Inverse Floater**

File: ird-ex27-inverse-floater.xml

On 30 August, 2000 PartyA and PartyB agree to enter into an ISDA. The terms of the contract are:

- Effective Date of the Swap: 30 August 2001.
- Termination Date of the Underlying Swap: 30 August, 2006
- Notional on the Underlying Swap Amount: USD 100,000,000
- PartyA makes quarterly payments with floating rate payments derived as (8.5% - floating rate index EUR-EURIBOR-Telerate), on an ACT/360 basis.
- PartyB makes semi-annual fixed rate payments based on a fixed rate of 4.5%, on an 30/360 basis.

Things to note:

- The use of the floatingRateMultiplierSchedule to invert the floating USD rate.

## **2.29 Example 28 - Bullet Payments**

File: ird-ex28-bullet-payments.xml

On 29 April, 2000 PartyA agrees the payment of a single cashflow to PartyB. The terms of the contract are:

- The payment has an unadjusted payment date of 27 July 2001.
- The amount to be paid is USD 15,000.
- Payment dates are adjusted to London and NY business centers for both payments

## **2.30 Example 29 - Swap with Non-Deliverable Settlement Provision**

File: ird-ex29-non-deliverable-settlement-swap.xml

Example that shows non-deliverable terms of an interest rate swap.

These non-deliverable terms specify the conditions under which the cashflows will be made in a different currency (the "settlement currency") than the currency in which a given leg is denominated (the "reference currency").

## ***2.31 Example 30 - Compounding and Averaging Swap with Relative Dates***

File: ird-ex30-swap-comp-avg-relative-date.xml

Compounding and averaging interest rate swap with relative effective dates and relative termination dates.

Effective dates equal the trade date plus two London business days. The resulting date is adjusted using the London and New York calendars and the modified following rule.

Termination dates equal the effective date plus two years. The resulting date is adjusted using the London and New York calendars and the modified following rule.

## ***2.32 Example 31 - Swap with Non-Deliverable Settlement Provision***

File: ird-ex31-non-deliverable-settlement-swap.xml

Example that shows within the non-deliverable terms the procedure to get a new quote when the primary settlement rate option is disrupted.

## **3 Inflation Swaps Examples**

### ***3.1 Introduction***

This section contains example FpML trades for Inflation Swaps. Each example illustrates how different product features are modeled in FpML.

The sample xml documents are available for download from the [fpml.org](http://fpml.org) website.

## **3.2 Example 1 - Year-on-Year**

File: inflation-swap-ex01-yoy.xml

### ***3.3 Example 2 - Year-on-Year with Bond Reference***

File: inflation-swap-ex02-yoy-bond-reference.xml

### ***3.4 Example 3 - Year-on-Year Initial Level***

File: inflation-swap-ex03-yoy-initial-level.xml.xml

### ***3.5 Example 4 - Year-on-Year with Interpolation***

File: inflation-swap-ex04-yoy-interp.xml

### ***3.6 Example 5 - Zero-Coupon***

File: inflation-swap-ex05-zc.xml

## 4 Credit Derivative Examples

### 4.1 Credit Default Swap

This section contains example credit default swap trades expressed in FpML. These examples cover typical trades in the various regions and sectors that constitute the global credit default swap market.

Each example is fully described by the ISDA confirm which accompanies it. Note that the ISDA confirms represent example transactions documented under the 1999 ISDA Credit Derivatives Definitions. For the short form examples 2, 8 and 11 and the long form examples 7 and 10 additional FpML example files have been included illustrating how the deal would typically be documented under the 2003 ISDA Credit Derivatives Definitions.

The name of each example consists of three components:

- **Region/Sector:** The example uses the terms that are commonly applicable at the time of the publication of this document to trades done in this region and sector. (e.g. Asian Corporate)
- **Form:** Whether the FpML description of the trade correspond to the short or long form of trade confirmation.
- **Payment Schedule:** The characteristics of the fixed rate payer's payment schedule.(e.g. Fixed Regular Payment Schedule).

In some cases there is an example that uses the 2003 ISDA definitions.

#### 4.1.1 Example 1 - Asian Corporate, Long Form, Fixed Regular Payment Schedule

FpML File: cd-ex01-long-asia-corp-fixreg.xml

ISDA Confirm: cd-ex01-long-asia-corp-fixreg.pdf

#### 4.1.2 Example 2 - Asian Corporate, Short Form, Fixed Regular Payment Schedule

FpML File: cd-ex02-short-asia-corp-fixreg.xml

FpML File (2003 version): cd-ex02-2003-short-asia-corp-fixreg.xml

ISDA Confirm: cd-ex02-short-asia-corp-fixreg.pdf

#### 4.1.3 Example 3 - Australian Corporate, Long Form, Fixed Regular Payment Schedule

File: cd-ex03-long-aussie-corp-fixreg.xml

ISDA Confirm: cd-ex03-long-aussie-corp-fixreg.pdf

#### 4.1.4 Example 4 - Australian Corporate, Short Form, Fixed Regular Payment Schedule

File: cd-ex04-short-aussie-corp-fixreg.xml

ISDA Confirm: cd-ex04-short-aussie-corp-fixreg.pdf

#### 4.1.5 Example 5 - Emerging Markets Asian Corporate, Long Form, Fixed Regular Payment Schedule

File: cd-ex05-long-emasia-corp-fixreg.xml

ISDA Confirm: cd-ex05-long-emasia-corp-fixreg.pdf

#### 4.1.6 Example 6 - Emerging Markets European Sovereign, Long Form, Fixed Regular Payment Schedule

File: cd-ex06-long-emeur-sov-fixreg.xml

ISDA Confirm: cd-ex06-long-emeur-sov-fixreg.pdf

#### **4.1.7 Example 7 - European Corporate, Long Form, Fixed Regular Payment Schedule**

File: cd-ex07-long-euro-corp-fixreg.xml

File (2003 version): cd-ex07-2003-long-euro-corp-fixreg.xml

ISDA Confirm: cd-ex07-long-euro-corp-fixreg.pdf

#### **4.1.8 Example 8 - European Corporate, Short Form, Fixed Regular Payment Schedule**

File: cd-ex08-short-euro-corp-fixreg.xml

File (2003 version): cd-ex08-2003-short-euro-corp-fixreg.xml

ISDA Confirm: cd-ex08-short-euro-corp-fixreg.pdf

#### **4.1.9 Example 9 - European Sovereign, Long Form, Fixed Regular Payment Schedule**

File: cd-ex09-long-euro-sov-fixreg.xml

ISDA Confirm: cd-ex09-long-euro-sov-fixreg.pdf

#### **4.1.10 Example 10 - US Corporate, Long Form, Fixed Regular Payment Schedule**

File: cd-ex10-long-us-corp-fixreg.xml

File (2003 version): cd-ex10-2003-long-us-corp-fixreg.xml

ISDA Confirm: cd-ex10-long-us-corp-fixreg.pdf

#### **4.1.11 Example 11 - US Corporate, Short Form, Fixed Regular Payment Schedule**

File: cd-ex11-short-us-corp-fixreg.xml

File (2003 version): cd-ex11-2003-short-us-corp-fixreg.xml

ISDA Confirm: cd-ex11-short-us-corp-fixreg.pdf

#### **4.1.12 Example 12 - Emerging Markets Asian Sovereign, Long Form, Fixed Regular Payment Schedule**

File: cd-ex12-long-emasia-sov-fixreg.xml

ISDA Confirm: cd-ex12-long-emasia-sov-fixreg.pdf

#### **4.1.13 Example 13 - Asia Sovereign, Long Form, Fixed Regular Payment Schedule**

File: cd-ex13-long-asia-sov-fixreg.xml

ISDA Confirm: cd-ex13-long-asia-sov-fixreg.pdf

#### **4.1.14 Example 14 - Emerging Markets Latin American Corporate, Long Form, Fixed Regular Payment Schedule**

File: cd-ex14-long-emlatin-corp-fixreg.xml

ISDA Confirm: cd-ex14-long-emlatin-corp-fixreg.pdf

#### **4.1.15 Example 15 - Emerging Markets Latin American Sovereign, Long Form, Fixed Regular Payment Schedule**

File: cd-ex15-long-emlatin-sov-fixreg.xml

ISDA Confirm: cd-ex15-long-emlatin-sov-fixreg.pdf

## ***4.2 Credit Default Swap Index***

### **4.2.1 Example 1 - CDX Example**

Transaction Supplement: cd-CDX-iTraxx-example-trades.pdf

File: cdindex-ex01-cdx.xml

### **4.2.2 Example 2 - iTraxx Example**

Transaction Supplement: cd-CDX-iTraxx-example-trades.pdf

File: cdindex-ex02-iTraxx.xml

### **4.2.3 Example 3 - iTraxx Contractual Supplement Example**

Transaction Supplement: cd-non-dealer-untranched-short-confirm.pdf

File: cdindex-ex03-iTraxx-contractual-supplement.xml

### **4.2.4 Example 4 - CDS Index Tranche**

File: cds-index-tranche.xml

## ***4.3 Credit Default Swap Basket***

### **4.3.1 Example 1 - CDS Basket**

File: cds-basket.xml

### **4.3.2 Example 2 - CDS Custom Basket**

File: cds-custom-basket.xml

### **4.3.3 Example 3 - CDS Basket Tranche**

File: cds-basket-tranche.xml

## ***4.4 Mortgage Derivatives***

### **4.4.1 Example 1 - CDS on CMBS**

File: cds-mortgage-CMBS.xml

### **4.4.2 Example 2 - CDS on RMBS**

File: cds-mortgage-RMBS.xml

## ***4.5 Loan Derivatives***

### **4.5.1 Example 1 - CDS Loan Secured List**

File: cds-loan-SecuredList.xml

### **4.5.2 Example 2 - CDS Loan Reference Obligation**

File: cds-loan-ReferenceObligation.xml

## ***4.6 Credit Default Swap Option***

### **4.6.1 Example 1 - CDS Option**

File: cd-swaption-1.xml

### **4.6.2 Example 2 - CDS Option**

File: cd-swaption-2.xml

### **4.6.3 Example 3 - CDX Index Option**

File: cdx-index-option.xml

### **4.6.4 Example 4 - iTraxx Index Option**

File: itraxx-index-option.xml

## ***4.7 Independent Amount***

### **4.7.1 Example 1 - Independent Amount**

The independent amount structure is in the Trade level. This example shows the use of independent amount in the context of a credit default swap.

File: cd-indamt-ex01-short-us-corp-fixreg.xml

## ***4.8 Credit Event Notice***

### **4.8.1 Example 1 - Credit Event Notice**

File: cdcen-ex01-credit-event-notice-message.xml

File: cdcen-ex01-credit-event-notice-document.xml

Credit Event Notice Sample: cd-example-credit-event-notice.pdf

## **5 Foreign Exchange Examples**

### ***5.1 Introduction***

This section contains twenty three example FpML trades related to FX and FX OTC options. Each example illustrates how different product features are modeled in FpML.

The sample xml documents are available for download from the [fpml.org](http://fpml.org) website.

## **5.2 Example 1 - FX Spot**

File: fx-ex01-fx-spot.xml

On 23 October, 2001, Citibank New York and Barclay's London agree to a foreign exchange trade. The terms of the contract are:

- Trade date: 23 October, 2001
- Value date: 25 October, 2001
- Barclays pays 10,000,000 GBP to Citibank
- Citibank pays 14,800,000 USD to Barclays
- Exchange rate equals 1.48 (USD per GBP).

Matching Service sends a TradeConfirmed message to CITI with the details of the confirmation.

### **5.3 Example 2 - FX Spot 'Cross' (non-base currency) with Side Rates**

File: fx-ex02-spot-cross-w-side-rates.xml

On 23 October, 2001, Chase New York and CSFB New York agree to a foreign exchange trade. The terms of the contract are similar to Example 1, but in this case, the currencies exchanged are EUR and GBP. Both of these institutions are USD-based, so rates against the base currency (USD) have been captured as well. The terms of the contract are:

- Trade date: 23 October, 2001
- Value date: 25 October, 2001
- CSFB pays 100,000,000 EUR to Chase
- Chase pays 6,300,680 USD to CSFB
- Exchange rate equals 0.630068 (GBP per EUR).
- GBPUSD rate equals 1.48, and EURUSD rate equals 0.9325.

Chase sends a RequestTradeConfirmation message to Matching Service with the details of the confirmation.

## **5.4 Example 3 - FX Forward**

File: fx-ex03-fx-fwd.xml

On 19 November, 2001, ABN Amro and DeutscheBank agree to a one-month forward foreign exchange contract. The terms of the contract are:

- Trade date: 19 November, 2001
- Value date: 21 December, 2001
- DB pays 10,000,000 EUR to ABN
- ABN pays 9,175,000 USD to DB
- Exchange rate equals 0.9175 (USD per EUR).
- Spot rate equals 0.9130, forward points equals 0.0045.

ABN sends a RequestTradeConfirmation message to Matching Service with the details of the confirmation.

## **5.5 Example 4 - FX Forward with specific Settlement Instructions**

File: fx-ex04-fx-fwd-w-settlement.xml

On 12 November, 2001, UBS Zurich and Citibank New York agree to a foreign exchange contract. The terms of the contract are:

- Trade date: 12 November, 2001
- Value date: 21 December, 2001
- UBS pays 10,000,000 GBP to Citi
- Citi pays 14,643,000 USD to UBS
- Exchange rate equals 1.4643 (USD per GBP).

Matching Service sends a TradeConfirmed message to CITI with the details of the confirmation.

Settlement is highlighted in this example. In this case, UBS pays the GBP from their account at UBS London to Citi's GBP account at Citi London, with the ultimate beneficiary being Citi New York.

For the USD, Citi pays the USD to ultimate beneficiary UBS Zurich, but in this case, UBS Zurich holds its USD at Citibank, and therefore UBS' account as Citibank is credited.

## ***5.6 Example 5 - FX Forward identified as using standard settlement instructions***

File: fx-ex05-fx-fwd-w-ssi.xml

This is identical to Example 3, but the standard settlement scheme is used to highlight that this trade will be paid using standard, pre-agreed settlement instructions.

ABN sends a RequestTradeConfirmation message to Matching Service with the details of the confirmation.

## **5.7 Example 6 - FX Forward with split settlement**

File: fx-ex06-fx-fwd-w-splits.xml

On 12 November, 2001, DeutscheBank Frankfurt and ABN Amro Amsterdam agree to a forward foreign exchange contract. The terms of the contract are:

- Trade date: 12 November, 2001
- Value date: 14 February, 2002
- Deutsche pays 13,000,000 USD to ABN
- ABN pays 14,393,600 EUR to Deutsche
- Exchange rate equals 1.1072 (EUR per USD).

Deutsche Bank sends a TradeConfirmed message to ABN Amro with the details of the confirmation.

In this example, the exchange rate has been quoted as an "inverted" rate.

Split settlement is highlighted in this example in the payment of the USD. Here, the following has been specified:

- 3,000,000 USD is to be paid to ABNAUS33
- 4,000,000 USD is to be paid to ABNAUS4C
- 6,000,000 USD is to be paid to ABNAUS6F

The ultimate beneficiary is ABNANL2A for all USD payments, but 3 different accounts have been specified for settlement.

For the EUR, ABN pays all EUR to Deutsche, but specifies settlement of the EUR via a debit of ABN's account in EUR with Deutsche.

## **5.8 Example 7 - Non-deliverable FX Forward**

File: fx-ex07-non-deliverable-forward.xml

On 09 January, 2002, Chase New York and CSFB New York agree to a FX non-deliverable forward contract. The terms of the contract are:

- Trade date: 9 January, 2002
- Fixing date and time: 9 February, 2002, 14:30
- Business center: Mumbai
- Rate source: RBIB
- Settlement currency: USD
- Value date: 13 February, 2002
- CSFB has agreed to notionally purchase 434M INR for 10M USD with Chase.
- Since the contract is non-deliverable, the computed settlement will occur on the fixing date based upon the differential between the agreed-upon trade rate and the observed spot rate on the fixing date.
- Exchange rate equals 43.40 INR per USD.

Chase sends a RequestTradeConfirmation message to CSFB with the details of the confirmation.

## **5.9 Example 8 - FX Swap**

File: fx-ex08-fx-swap.xml

On 23 January, 2002, Chase New York and Deutsche Frankfurt agree to an FX swap contract. The terms of the contract are:

- Trade date: 23 January, 2002
- Value date (near leg): 25 January, 2002
- Value date (far leg): 25 February, 2002
- On January 25, Deutsche pays 10,000,000 GBP to Chase
- On January 25, Chase pays 14,800,000 USD to Deutsche
- On February 25, Chase pays 10,000,000 GBP to Deutsche
- On February 25, Deutsche pays 15,000,000 USD to Chase
- Exchange rates equal 1.48 on near leg, 1.5 on far leg.

Deutsche Bank sends a TradeConfirmed message to Chase with the details of the confirmation.

## **5.10 Example 9 - FX OTC Option - European exercise**

File: fx-ex09-euro-opt.xml

On 4 December, 2001, Chase agrees to purchase a standard FX OTC option from ABN Amro. The terms of the contract are:

- Trade date: 4 December, 2001
- Expiry date: 4 June, 2002
- Option buyer: Chase
- Option seller: ABN Amro
- Exercise style: European
- Quote: 75m 6-month AUD Put on 36.9m USD @ strike of 0.4920
- Option premium: 36,900 USD
- Business center: New York
- Cut Name: New York

ABN Amro sends a RequestTradeConfirmation message to Chase with the details of the confirmation.

## **5.11 Example 10 - FX OTC Option - American exercise**

File: fx-ex10-amer-opt.xml

On 4 December, 2001, Chase agrees to purchase a standard FX OTC option from ABN Amro. The terms of the contract are:

- Trade date: 4 December, 2001
- Expiry date: 4 June, 2002
- Option buyer: Chase
- Option seller: ABN Amro
- Exercise style: American
- Quote: 75m 6-month AUD Put on 36.9m USD @ strike of 0.4920
- Option premium: 36,900 USD
- Business center: New York
- Cut Name: New York

ABN Amro sends a TradeConfirmed message to Chase with the details of the confirmation.

## **5.12 Example 11 - Non-deliverable FX OTC Option**

File: fx-ex11-non-deliverable-option.xml

On 15 January, 2001, Chase agrees to purchase a non-deliverable FX OTC USD / VEB option from ABN Amro. The terms of the contract are:

- Trade date: 15 January, 2001
- Expiry date: 9 April, 2001
- Expiry time: 10:00
- Value date: 11 April, 2001
- Option buyer: Chase
- Option seller: ABN Amro
- Exercise style: European
- Call currency: USD
- Call amount: 15,000,000
- Put currency: VEB
- Put amount: 17,250,000
- Strike price: 1.15
- Option premium: 372,750 USD
- Premium payment: 17 January, 2001
- Business center: New York
- Settlement currency: USD
- Primary rate source: VEB BCV28
- Secondary rate source: VEB 01

ABN Amro sends a TradeConfirmed message to Chase with the details of the confirmation.

## **5.13 Example 12 - FX OTC Barrier Option**

File: fx-ex12-fx-barrier-option.xml

On 16 August, 2001, DB agrees to purchase a EUR call against USD put barrier option with a knock-in

- Trade date: 16 August, 2001
- Expiry date: 6 February, 2002
- Expiry time: 10:00
- Value date: 8 February, 2002
- Option buyer: DB
- Option seller: Chase
- Exercise style: European
- Call currency: EUR
- Call amount: 5,000,000
- Put currency: USD
- Put amount: 4,500,000
- Strike price: 0.9
- Knockin: 0.8975
- Reference spot: 0.8935
- Option premium: 45,000 USD
- Premium payment: 20 August, 2002
- Business center: New York

Chase sends a RequestTradeConfirmation message to DB with the details of the confirmation.

## **5.14 Example 13 - FX OTC Double Barrier Option**

File: fx-ex13-fx-dbl-barrier-option.xml

On 3 January, 2001, DB agrees to purchase a 2-month double knockout FX OTC JPY put / USD call option from Chase. The terms of the contract are:

- Trade date: 3 January, 2002
- Expiry date: 4 March, 2002
- Expiry time: 10:00
- Value date: 6 March, 2002
- Option buyer: DB
- Option seller: Chase
- Exercise style: European
- Call currency: USD
- Call amount: 23,798,191.34
- Put currency: JPY
- Put amount: 2,500,000,000
- Strike price: 105.05
- Knockout: 102
- Knockout: 115
- Option premium: 192,765.35 USD
- Premium payment: 7 January, 2002
- Business center: New York

DB sends a RequestTradeConfirmation message to Chase with the details of the confirmation.

## **5.15 Example 14 - FX OTC Digital/Binary Option -- Euro Binary**

File: fx-ex14-euro-digital-option.xml

On 12 November, 2001, UBS agrees to purchase a two-week GBP/USD European binary option and pays a premium. At expiry, if the spot rate is above the trigger rate, UBS receives a payout.

CITI sends a TradeConfirmed message to UBS with the details of the confirmation.

## **5.16 Example 15 - FX OTC Digital/Binary Option -- Euro Range Digital**

File: fx-ex15-euro-range-digital-option.xml

On 12 November, 2001, UBS agrees to purchase a two-week GBP/USD European range binary option and pays a premium. At expiry, if below the higher trigger rate and above the lower trigger rate, UBS receives a payout.

CITI sends a RequestTradeConfirmation message to UBS with the details of the confirmation.

## **5.17 Example 16 - FX OTC Digital/Binary Option -- One-Touch**

File: fx-ex16-one-touch-option.xml

On 12 November, 2001, UBS agrees to purchase a two-week GBP/USD one-touch option and pays a premium. At any time before expiry, if the spot rate is above the trigger rate, UBS receives a payout, but this payout is deferred until the value date of the option.

CITI sends a TradeConfirmed message to UBS with the details of the confirmation.

## **5.18 Example 17 - FX OTC Digital/Binary Option -- No-Touch**

File: fx-ex17-no-touch-option.xml

On 12 November, 2001, UBS agrees to purchase a two-week GBP/USD no-touch option and pays a premium. If the spot rate remains below the trigger rate at all times until expiry, UBS receives a payout.

CITI sends a TradeConfirmed message to UBS with the details of the confirmation.

## **5.19 Example 18 - FX OTC Digital/Binary Option -- Double One-Touch**

File: fx-ex18-double-one-touch-option.xml

On 12 November, 2001, UBS agrees to purchase a two-week GBP/USD double one-touch option and pays a premium. UBS receives a payout at maturity if the spot rate has crossed either trigger rate at some time during the lifetime of the option.

UBS sends a RequestTradeConfirmation message to Citi with the details of the confirmation.

## **5.20 Example 19 - FX OTC Digital/Binary Option -- Double No-Touch**

File: fx-ex19-double-no-touch-option.xml

On 12 November, 2001, UBS agrees to purchase a two-week GBP/USD double no-touch option and pays a premium. If the spot rate remains below the upper trigger rate and above the lower trigger rate at all times until expiry, UBS receives a payout.

Chase sends a RequestTradeConfirmation message to DB with the details of the confirmation.

## **5.21 Example 20 - FX OTC Average Rate Option with Parametric Schedule**

File: fx-ex20-avg-rate-option-parametric.xml

On 16 August, 2001, DB agrees to purchase an average rate option from Chase and pays a premium. The terms of the contract are:

- Trade date: 16 August, 2001
- Expiry date:
- Option buyer: DB
- Option seller: Chase
- Put: 5,750,000 MXN
- Call: 585,539.71 USD
- Rate source: BNBX
- Observation start date: 1 November, 2001
- Observation end date: 30 November, 2001
- Observation frequency: Daily, all business days for each currency

Chase sends a TradeConfirmed message to DB with the details of the confirmation.

## **5.22 Example 21 - FX OTC Average Rate Option with Specific Date Schedule**

File: fx-ex21-avg-rate-option-specific.xml

This example is identical to Example 20. Instead of using a parametric frequency (e.g., daily), each specific observation date has been specified. All weighting factors are 1.0, since all rates would be weighted evenly when the average rate is computed upon expiry.

Chase sends a RequestTradeConfirmation message to DB with the details of the confirmation.

## **5.23 Example 22 - Straddle (sample usage of Strategy)**

File: fx-ex22-straddle.xml

On 20 November 2001, Chase agrees to purchase a straddle from ABN Amro. A straddle consists of buying a call and a put for the same currency pair, at the same strike price.

This contains two instances of the fxSimpleOption structure within strategy. Note that this is used when a single trade reference number is desired.

ABN Amro sends a RequestTradeConfirmation message to Chase with the details of the confirmation.

## **5.24 Example 23 - Delta Hedge (sample usage of Strategy)**

File: fx-ex23-delta-hedge.xml

On 4 December, 2001, Chase agrees to purchase an FX OTC European option from ABN Amro. At the same time, they agree to hedge their FX spot risk by doing a FX spot transaction. This is all part of a single trade strategy.

ABN Amro sends a TradeConfirmed message to Chase with the details of the confirmation.

## ***5.25 Term Deposit Example 1 - Simple Term Deposit***

File: td-ex01-simple-term-deposit.xml

ABN Amro pays 4% CHF fixed rate loan on ACT/360 basis a for 25 million Deposit from Midland starting February 14, 2002 and maturing February 15, 2002.

ABN Amro sends a TradeConfirmed message to Midland with the details of the confirmation.

## ***5.26 Term Deposit Example 2 - Term Deposit with Settlement Instructions***

File: td-ex02-term-deposit-w-settlement-etc.xml

ABN Amro pays 4% CHF fixed rate loan on ACT/360 basis a for 25 million Deposit from Midland starting February 14, 2002 and maturing February 15, 2002. This example also demonstrates setting explicit settlement instructions for each cash flow.

ABN Amro sends a TradeConfirmed message to Midland with the details of the confirmation.

## **6 Equity Options Examples**

### ***6.1 Introduction***

This section contains examples of FpML trades for Equity Options products. Each example illustrates how different product features are modeled in FpML.

The sample xml documents are available for download from the [fpml.org](http://fpml.org) website.

- Integral Multiple: 1
- Strike Price: 32 EUR
- Premium: 405,000 EUR
- Premium Per Option: 2.70 EUR
- Premium Payment Date: 17th July 2001
- Exchange: EURONEXT
- Clearance System: SICOVAM
- Calculation Agent: Party A
- Commencement Date: 13th July 2001
- Latest Exercise Time: 5:15pm London
- Expiration Time: Exchange Close
- Expiration Date: 27th Sep 2001
- Automatic Exercise: Applicable
- Valuation Time Exchange: Close
- Valuation Date Exercise: Date
- Physical Settlement: Applicable
- Failure To Deliver: Applicable
- Method of Adjustment: Calculation Agent
- Share-for-Share Merger: Alternative Obligation
- Share-for-Other Merger: Cancellation and Payment
- Share-for-Combined Merger: Cancellation and Payment
- Nationalisation or Insolvency: Cancellation and Payment
- Governing Law: English

## **6.4 Example 3 - Call or Put Spread Short Form**

File: eqd-ex03-call-or-put-spread-short-form.xml

## **6.5 Example 4 - European Call Index Long Form**

File: eqd-ex04-european-call-index-long-form.xml

On 4 September, 2001, Party A and Party B agree to an equity option trade. The terms of the contract are:

- Trade Date: 04-09-2001
- Option Style: European
- Option Type: Call
- Seller: Party A
- Buyer: Party B
- Underlying: SMI Index
- Number Options: 2,500
- Option Entitlement: 1
- Maximum Number Of Options: 2,500
- Strike Price: 8,700
- Premium: 300,000 CHF
- Premium Payment Date: 06-09-2001
- Exchange: SWX
- Related Exchange: Eurex
- Calculation Agent: Seller
- Expiration Time: Official Settlement Price
- Expiration Date: Valuation Date 19-12-2003
- Automatic Exercise: Applicable
- Valuation Date: OSP Date
- Futures Price Valuation: Applicable

- Equity Payment Dates: 3 currency business days following each valuation date
- Termination Date: On the final equity payment date
- Payer of the Equity Amount: Party A
- Receiver of the Equity Amount: Party B
- Number of Underlyers: 1
- Underlyer Type: Equity
- Underlyer: Shire Pharmaceutical group
- Number of Underlying Units: 760,400
- Initial Price: USD 37.44
- Notional Amount: USD 28,469,376
- Type of Notional Adjustments: Execution
- Equity Amount: Defined according to the standard ISDA Definition
- Payment Currency for the Equity Amount: USD
- Interim Valuation Price: The official closing price of the regular session on the Exchange
- Final Valuation Price: The price at which Party A will unwind its hedge position
- Return Type: Total
- Dividend Payout Ratio: 100%
- Dividend Entitlement Date: Ex-Date
- Dividend Payment Date: The equity payment date on which the relevant dividend period ends
- Payer of the Interest Amount: Party B
- Receiver of the Interest Amount: Party A
- Floating Rate Reference: USD-LIBOR-BBA
- Maturity of the Floating Rate Reference: 1 month
- Spread: Minus 0.20% per annum
- Floating Rate Reset Date: The first day of each calculation period
- Floating Rate Day Count Fraction: Actual/360
- Interest Amount: Defined according to the standard ISDA Definition
- Payment Currency for the Interest Amount: USD
- Early Termination Option: Starting on Trade Date for Party A
- Early Termination Option: Starting on Trade Date for Party B

Party A sends a RequestTradeConfirmation message to Party B with the details of the agreement.

### 8.3 Example 2 - Composite Basket Swap Long Form

File: eqs-ex02-composite-basket-long-form.xml

On 17th July, 2002, Party A and Party B agree to an equity swap trade. The terms of the contract are:

- Trade Date: 17th July 2002
- Effective Date: 3 exchange business days after the trade date
- Valuation Dates: 2 valuation dates, October 17th, 2002 and January 17th, 2003
- Equity Payment Dates: 3 currency business days following each valuation date
- Termination Date: On the final equity payment date
- Payer of the Equity Amount: Party A
- Receiver of the Equity Amount: Party B
- Number of Baskets: 1, with 6 equity constituents
- Underlyer - Number of Units: Telecom Italia, for 432,000 units
- Underlyer - Number of Units: Nokia Oyj, for 227,000 units
- Underlyer - Number of Units: Telecom Italia Mobile, for 783,000 units
- Underlyer - Number of Units: Telefonica de Espana, for 344,000 units
- Underlyer - Number of Units: Portugal Telecom, for 340,000 units
- Underlyer - Number of Units: Vodafone Group, for 2,486,000 units
- Initial Price: EUR 19,785,157.16
- Notional Amount: EUR 19,785,157.16
- Type of Notional Adjustments: Standard
- Equity Amount: Defined according to the standard ISDA Definition
- Payment Currency for the Equity Amount: The reference currency of the swap
- Interim Valuation Price: The official closing price of the regular session on the Exchange
- Final Valuation Price: The price at which Party A will unwind its hedge position
- Return Type: Total
- Dividend Payout Ratio: 85% for each of the underlying shares
- Dividend Entitlement Date: Ex-Date
- Dividend Payment Date: The equity payment date on which the relevant dividend period ends
- Reference Currency for the Composite FX Swap: EUR
- Determination Method for the Exchange Rate: Good faith by the calculation agent
- Payer of the Interest Amount: Party B
- Receiver of the Interest Amount: Party A
- Floating Rate Reference: EUR-EURIBOR-Telerate
- Maturity of the Floating Rate Reference: 3 months
- Spread: Plus 0.50% per annum
- Floating Rate Reset Date: The first day of each calculation period
- Floating Rate Day Count Fraction: Actual/360
- Interest Amount: Defined according to the standard ISDA Definition
- Payment Currency for the Interest Amount: The reference currency of the swap
- Early Termination Option: Starting on Trade Date for Party A
- Early Termination Option: Starting on Trade Date for Party B

Party A sends a TradeConfirmed message to Party B with the details of the agreement.

## 8.4 Example 3 - Index Swap With a Quanto Feature Long Form

File: eqs-ex03-index-quanto-long-form.xml

On 19th July, 2002, Party A and Party B agree to an equity swap trade. The terms of the contract are:

- Trade Date: 19th July 2002
- Effective Date: 3 exchange business days after the trade date
- Valuation Dates: 4 valuation dates, starting on October 21st, 2002 and July 21st, 2003
- Equity Payment Dates: 3 currency business days following each valuation date
- Termination Date: On the final equity payment date
- Payer of the Equity Amount: Party A
- Receiver of the Equity Amount: Party B
- Number of Baskets: 1, with 3 index constituents
- Underlyer - Number of Units: CAC40, for 960 units
- Underlyer - Number of Units: IBEX35, for 260 units
- Underlyer - Number of Units: HSI, for 580 units
- Initial Price: USD 5,591,987.41
- Notional Amount: USD 5,591,987.41
- Type of Notional Adjustments: Standard
- Equity Amount: Defined according to the standard ISDA Definition
- Payment Currency for the Equity Amount: The reference currency of the swap
- Interim Valuation Price: The official closing price of the regular session on the Exchange
- Final Valuation Price: The price at which Party A will unwind its hedge position
- Return Type: Price
- Reference Currency for the Quanto: USD
- Currency Rate 1: USD/EUR = 0.99140
- Currency Rate 2: USD/HKD = 7.80
- Payer of the Interest Amount: Party B
- Receiver of the Interest Amount: Party A
- Floating Rate Reference: USD-LIBOR-Telerate
- Maturity of the Floating Rate Reference: 3 months
- Spread: Plus 0.22% per annum
- Floating Rate Reset Date: The first day of each calculation period
- Floating Rate Day Count Fraction: Actual/360
- Interest Amount: Defined according to the standard ISDA Definition
- Payment Currency for the Interest Amount: The reference currency of the swap
- Early Termination Option: Starting on Trade Date for Party A
- Early Termination Option: Starting on Trade Date for Party B

Party A sends a RequestTradeConfirmation message to Party B with the details of the agreement.

## 8.5 Example 4 - Zero-strike Equity Swap

File: eqs-ex04-zero-strike-long-form.xml

On 17th October, 2002, Party A and Party B agree to an equity swap trade. The terms of the contract are:

- Trade Date: 17th October 2002
- Effective Date: 24th October, 2002
- Valuation Date: October 17th, 2003
- Equity Payment Dates: 5 currency business days following the valuation date
- Termination Date: On the final equity payment date
- Payer of the Equity Amount: Party A
- Receiver of the Equity Amount: Party B
- Number of Underlyers: 1
- Underlyer Type: Equity
- Underlyer: Zee
- Number of Underlying Units: 31,000
- Initial Price: USD 1.8036
- Notional Amount: EUR 55,911.60
- Type of Notional Adjustments: Standard
- Equity Amount: Final Price \* Number of shares
- Payment Currency for the Equity Amount: The reference currency of the swap
- Final Valuation Price: The price at which Party A will unwind its hedge position
- Commissions: 60 basis points
- Return Type: Total
- Dividend Payout Ratio: 100%
- Dividend Entitlement Date: Ex-Date
- Dividend Payment Date: The equity payment date on which the relevant dividend period ends
- Reference Currency for the Composite FX Swap: USD
- Determination Method for the Exchange Rate: Good faith by the calculation agent
- Initial Amount Payable: USD 55,911.60
- Initial Amount Payer: Party B
- Initial Amount Payment Date: The effective date
- Early Termination Option: Starting on Trade Date for Party A
- Early Termination Option: Starting on Trade Date for Party B

Party A sends a TradeConfirmed message to Party B with the details of the agreement.

## **8.6 Example 5 - Single Underlyer Swap with an Upfront Fee as well as a Brokerage Fee Long Form**

File: eqs-ex05-single-stock-plus-fee-long-form.xml

On 10th September, 2002, Party A and Party B agree to an equity swap trade. The terms of the contract are:

- Trade Date: 10th September 2002
- Effective Date: 12th September 2002
- Valuation Date: March 12th, 2003
- Equity Payment Dates: 2 currency business days following the valuation date
- Termination Date: On the final equity payment date
- Payer of the Equity Amount: Party A
- Receiver of the Equity Amount: Party B
- Number of Underlyers: 1
- Underlyer Type: Equity
- Underlyer: Fubon Financial Holding
- Number of Underlying Units: 18,388,000
- Initial Price: Average price per share obtained by Party B on Trade Date by selling the shares in the market
- Commissions: 30 basis points
- Notional Amount: Number of shares \* Initial price
- Type of Notional Adjustments: Standard
- Equity Amount: Defined according to the standard ISDA Definition
- Payment Currency for the Equity Amount: USD
- Final Valuation Price: The price at which Party A will unwind its hedge position
- Return Type: Total

File: eqvs-ex04-variance-swap-option-index.xml

## **12 Correlation Derivatives Examples**

### ***12.1 Introduction***

This section contains example FpML trades for Correlation Swaps and Correlation Swaps Options. Each example illustrates how different product features are modeled in FpML.

The sample xml documents are available for download from the [fpml.org](http://fpml.org) website.

## **12.2 Example 1 - Correlation Swap**

File: eqcs-ex01-correlation-swap.xml

## **12.3 Example 2 - Correlation Swap Confirmation**

File: eqcs-ex02-correlation-swap-confirmation.xml

## **12.4 Example 3 - Correlation Swap Confirmation**

File: eqcs-ex03-correlation-swap-confirmation.xml

## **12.5 Example 4 - Correlation Swap Confirmation**

File: eqcs-ex04-correlation-swap-confirmation.xml

## **12.6 Example 5 - Correlation Swap Option**

File: eqcs-ex05-correlation-swap-option.xml

## **13 Dividend Derivatives Examples**

### ***13.1 Introduction***

This section contains examples of FpML transactions for Dividend Swap and Dividend Swap Option products. Each example illustrates how different product features are modeled in FpML.

The sample xml documents are available for download from the [fpml.org](http://fpml.org) website.

## **13.2 Example 1 - Dividend Swap**

File: div-ex01-dividend-swap.xml

### ***13.3 Example 2 - Dividend Swap Collateral***

File: div-ex02-dividend-swap-collateral.xml

## ***13.4 Example 3 - Dividend Swap Option***

File: div-ex03-dividend-swap-option.xml

## **14 Loan Examples**

### ***14.1 Introduction***

This section contains example for Loan. Each example illustrates how different product features are modeled in FpML.

The sample xml documents are available for download from the [fpml.org](http://fpml.org) website.

## **14.2 Example 1 - Drawdown Notice**

File: loan-ex01-drawdown-notice.xml

### **14.3 Example 2 - Drawdown Notice (CITI)**

File: loan-ex02-drawdown-notice-citi.xml

## **14.4 Example 3 - Drawdown Notice (BoA)**

File: loan-ex03-drawdown-notice-boa.xml

## **14.5 Example 4 - Interest Payment Notice**

File: loan-ex04-interest-payment-notice.xml

## **14.6 Example 5 - Interest Payment Notice (GS)**

File: loan-ex05-interest-payment-notice-gs.xml

## **14.7 Example 6 - Interest Payment Notice (BoA)**

File: loan-ex06-interest-payment-notice-boa.xml

## ***14.8 Example 7 - Repayment Notice***

File: loan-ex07-repayment-notice.xml

## **14.9 Example 8 - Repayment Notice (GS)**

File: loan-ex08-repayment-notice-gs-1.xml

## ***14.10 Example 9 - Repayment Notice (GS)***

File: loan-ex09-repayment-notice-gs-2.xml

## 15 Pricing and Risk Examples

### 15.1 Use Cases/Examples

This section identifies scenarios intended to be supported by this specification:

#### 15.1.1 Terminology:

- Client: The originator of a valuation request.
- Provider: The acceptor of a valuation request that generates a valuation report.
- Valuation Request: XML document that specifies what is to be calculated.
- Valuation Report: XML document that contains the results of a valuation. This report may contain either one or more NPVs, or Risk related measures, or both.

#### 15.1.2 Request/Response scenarios:

In these scenarios one party to a deal requests a report from either a counterparty, third party service, or another application or department within the same firm.

##### 15.1.2.1 Scenario 1 – Request Trade Value

A client wants to request a price quote for a proposed trade from a provider (or set of providers). The provider might be anonymous to the client. Typically the provider would be some sort of dealer. The client may be another dealer or an electronic trading service.

- No market data is necessary in the request.
- No market data is returned in the result.
- Market data is assumed to be live or current market data.

##### 15.1.2.1.1 Use Case 1 Description

Client submits a request, including:

- The trade details – for an interest rate swap
- A specification of the required results: Characteristics of the response: Base party for valuation (client) Reporting Currency Valuation Date Requested values Trade Value (NPV)
- Examples can be found at: [pr-ex01a-request-trade-val.xml](#)  
[pr-ex10-simple-scenario-val-request.xml](#)

Provider returns a basic valuation report, including:

- Trade ID
- Valuation report, including Characteristics of the valuation, e.g. Valuation Date Base Party Reporting currency Trade Value
- Examples can be found at: [pr-ex01a-return-trade-val.xml](#) [pr-ex09-simple-scenario-val-report.xml](#)

##### 15.1.2.2 Scenario 2 – Request Portfolio Value/Sensitivity

A buy-side client wants to request a valuation from a dealer for a deal or portfolio of deals that it has done with that dealer. This request may be also be all deals of a specific type (IR Swaps, CD Swaps, Equity Swaps, FX options, etc.)

- No market data is necessary in the request.
- No market data is returned in the result.
- Market data is for a specified end-of-day close.

Variations on Scenario 2:

- B) The client wants to obtain sensitivity measures as well as simple PV

#### 15.1.2.2.1 Use Case 2A Description

Client submits a request, including:

- The portfolio details – characteristics that the trade must match One party must be client Product must be an IR Swap
- A specification of the required results: Characteristics of the response: Base party for valuation (client) Reporting Currency Valuation Date Requested values Trade Value (NPV)
- An example can be found at: pr-ex02a-request-port-val.xml

Provider returns a basic valuation report, including:

- Portfolio contents (i.e. list of matching trades)
- Valuation report, including Characteristics of the valuation, e.g. Valuation Date Base Party Reporting currency For each trade, Trade Value
- An example can be found at: pr-ex02a-return-port-val.xml

#### 15.1.2.2.2 Use Case 2B Description

Client submits a request, including:

- The portfolio details – list of trade ids to report on
- A specification of the required results: Characteristics of the response: Base party for valuation (client) Reporting Currency Valuation Date Requested values Trade Value (NPV) Sensitivity of NPV to yield curve
- An example can be found at: pr-ex02b-request-port-val-and-sens.xml

Provider returns a basic valuation report, including:

- Portfolio contents (i.e. list of matching trades)
- Valuation report, including Characteristics of the valuation, e.g. Valuation Date Base Party Reporting currency For each trade, Trade Value List of sensitivities
- An example can be found at: pr-ex02b-return-port-val-and-sens.xml

#### 15.1.2.3 Scenario 3 – Request Sensitivity Generation

A relatively sophisticated client wants to calculate risk sensitivities and/or scenario valuations for a portfolio of deals that it can price, but either doesn't have the tools or the compute power for sensitivity or scenario calculation.

- Market data is specified in the request.
- A level of control is required over pricing parameters

Provider doesn't need to provide market data back

Variations on Scenario 3:

- 3B – Client wants market data back and explicit link of risk to market data
- 3C Client specifies scenarios to base market data (live or EOD) – e.g. +/- 10% credit spread, +/- 10BP interest rate change

#### 15.1.2.3.1 Use Case 3A Description

Client submits a request, including:

- The portfolio details – list of trade ids to report on
- A specification of the required environment (curves to use)
- A specification of the required results: Characteristics of the response: Base party for valuation (client) Reporting Currency Valuation Date Requested values Trade Value (NPV) Sensitivity of

NPV to yield curve

- An example can be found at: [pr-ex03a-request-sensitivity-generation.xml](#)

Provider returns a detailed valuation report, including:

- Portfolio contents (i.e. list of matching trades)
- Valuation report, including Characteristics of the valuation, e.g. Valuation Date Base Party Reporting currency For each trade, Trade Value List of sensitivities
- A basic example can be found at: [pr-ex03a-return-sensitivities.xml](#)
- An example providing slightly more detail about the sensitivities can be found at: [pr-ex03a-return-sensitivities-and-description.xml](#)

#### 15.1.2.3.2 Use Case 3B Description

Client submits a request, including:

- The portfolio details – list of trade ids to report on
- A specification of the required environment (curves to use)
- A specification of the required results: Characteristics of the response: Base party for valuation (client) Reporting Currency Valuation Date Requested values Trade Value (NPV) Sensitivity of NPV to yield curve That the client wishes the market environment returned (`marketEnvironmentIncluded = true`).
- An example can be found at: [pr-ex03b-request-sensitivity-generation.xml](#)

Provider returns a detailed valuation report, including:

- Portfolio contents (i.e. list of matching trades)
- Valuation report, including Characteristics of the valuation, e.g. Valuation Date Base Party Reporting currency For each trade, Trade Value Sensitivity definitions List of sensitivities, linked to market inputs
- An example can be found at: [pr-ex03b-return-sensitivities-with-definition.xml](#)

#### 15.1.2.3.3 Use Case 3C Description

Client submits a request, including:

- The portfolio details – list of trade ids to report on
- A specification of the required environment (curves to use)
- A specification of the valuation scenario to use (shifts to apply)
- A specification of the required results: Characteristics of the response: Base party for valuation (client) Reporting Currency Valuation Date Requested values Trade Value (NPV) Sensitivity of NPV to yield curve That the client wishes the market environment returned (`marketEnvironmentIncluded = true`). Examples can be found at:  
[pr-ex12-uc4C-sens-on-scenario-request.xml](#) [pr-ex08-sens-on-scenario-request.xml](#)  
[pr-ex04-cds-sens-on-scenario-request.xml](#) [pr-ex06-option-sens-on-scenario-request.xml](#)

Provider returns a detailed valuation report, including:

- Portfolio contents (i.e. list of matching trades)
- Valuation report, including Characteristics of the valuation, e.g. Valuation Date Base Party Reporting currency Valuation scenario applied For each trade, Trade Value Sensitivity definitions List of sensitivities, linked to market inputs Examples can be found at:  
[pr-ex11-uc4C-sens-on-scenario-report.xml](#) [pr-ex07-sens-on-scenario-report.xml](#)

#### 15.1.2.4 Scenario 4 – Request New Trade Impact

A buy-side client wants to understand the impact on valuation and risk exposure that a proposed deal would

have on an existing portfolio. The provider may be the dealer that is proposing the trade.

This use case is implemented by the client requesting the result twice. The first request includes the original portfolio only, and the second includes the new trade. The requesting party should combine the two results.

For all additive valuations and risk measures, the second call can include only the new trade. For results which are not additive, e.g. value at risk, the second request includes also the original portfolio.

#### **15.1.2.5 Scenario 5 – Perform Analyses**

A trader or marketer oriented spreadsheet client wants to value and calculate risk for a trade or set of trades. The valuation provider is an internal valuation service.

- Market data may or may not be specified in the request.
- Market data and pricing data is returned in the result.
- A high-degree of control is required over pricing parameters.
- No example is currently available for this.

##### **15.1.2.5.1 Use Case 5A Description**

Client submits a request, including:

- The portfolio details – list of trade ids to report on
- A specification of the required environment (curves to use)
- A specification of the required results: Characteristics of the response: Base party for valuation (client) Reporting Currency Valuation Date Requested values Trade Value (NPV) Sensitivity of NPV to yield curve Sensitivity of NPV to vol surface [How does the client specify that provider should return the market environment?]
- No example is currently available for this.

Service returns a detailed valuation report, including:

- Portfolio contents (i.e. list of matching trades)
- Market environment used (curves, vol surfaces)
- Valuation report, including Characteristics of the valuation, e.g. Valuation Date Base Party Reporting currency Valuation scenario applied For each trade, Trade Value Sensitivity definitions List of sensitivities, linked to market inputs
- No example is currently available for this.

#### **15.1.2.6 Scenario 6 – Request Pricing Inputs**

The use cases in this scenario are out of scope for this working draft, but are expected to be covered in an upcoming draft. This means that there is no schema support for these requests and responses, and there are no examples provided. The use case descriptions are provided as an indication of the functionality that is intended to be supported in the future.

A party is requesting a curve of a specific type (IR, Credit, Asset, etc.) Most likely this would be an internal request between applications within the same firm.

- Market data and other pricing data may be required in the report.

Client submits a market input request, including:

- Market environment characteristics to respond with Environment Name Currency Input Type (yield curves, vol surfaces) Valuation date
- A specification of the required results: Requested values Definitions (e.g. curve definitions) Input values Output values (DFs, Zeros, etc.) No example is currently available for this.

Service returns a market environment, including:

- Market environment(s) including Yield curves Vol Surfaces
- No example is currently available for this.

### **15.1.3 Notification Scenarios**

In these scenarios a party, service or internal system sends out reports without being first solicited to do so. Parameters that should be agreed upon between the sending and receiving parties should include: counterparty, deal types, when the report is sent, supporting information such as FX rates, risk sensitivities, etc.. Parties should also agree what, if any acknowledgement of receipt should be sent by the receiving party.

#### **15.1.3.1 Position Report**

Supports the DSWG Position Report representation:

- pr-ex13-position-report.xml

#### **15.1.3.2 Use Case 7:**

An internal middle or back office system needs a feed of valuation (and perhaps risk sensitivities) from a variety of systems, in the form of valuation reports.

- No explicit valuation request
- Market data and other pricing data may be required in the report.

#### **15.1.3.3 Use Case 8:**

A service or broker may provide a feed of valuation (and perhaps risk sensitivities) to their clients on a regularly scheduled basis.

- No explicit valuation request
- Market data and other pricing data may be required in the report.

# 1 CHARACTER ENCODING AND CHARACTER REPERTOIRE

## ***1.1 Character Encoding***

Producers of FpML documents intended for interchange with other parties must encode such documents using either UTF-8 or UTF-16. Consumers of FpML documents must be able to process documents encoded using UTF-8, as well as documents encoded using UTF-16.

For more information, see

<http://www.w3.org/TR/REC-xml#charencoding>

## **1.2 Character Repertoire**

FpML element content, as well as values of the FpML id and href attributes, may use any valid XML characters.

For more information, see

<http://www.w3.org/TR/REC-xml#charsets>

## 2 DATATYPES AND CODING SCHEMES

### 2.1 Datatypes

FpML uses a subset of the built-in datatypes (both primitive and derived datatypes) as defined in XML Schema Part 2: Datatypes, W3C Recommendation 02 May 2001. The built-in datatypes are described at:

<http://www.w3.org/TR/2001/REC-xmlschema-2-20010502/#built-in-datatypes>

The built-in datatypes used in FpML are the following:

- boolean
- date
- decimal
- integer
- nonNegativeInteger
- positiveInteger
- string
- time.

The set of valid literals for each datatype are those defined in the XML Schema specification as being its lexical space. Additional constraints are imposed by FpML on the date and time built-in datatypes as described below.

#### 2.1.1 date

All elements of type date in FpML must contain date values with the format CCYY-MM-DD where "CC" represents the century, "YY" the year, "MM" the month and "DD" the day. The CCYY field must have exactly four digits, the MM and DD fields exactly two digits each; leading zeroes must be used if the field would otherwise have too few digits. A following time zone qualifier is not allowed and year values must be in the range 0001 to 9999. For example, 25 May 2000 would be represented in FpML as 2000-05-25.

#### 2.1.2 time

All elements of type time in FpML must represent daily recurring instant of time values with the format hh:mm:ss where "hh", "mm" and "ss" represent hour, minute and second respectively. The hh, mm and ss fields must have exactly two digits each; leading zeroes must be used if the field would otherwise have too few digits. FpML imposes the further restriction that the second (ss) component must be '00' and a time zero qualifier is not allowed. For example, 00:00:00 (midnight), 01:00:00 (1:00am), 12:00:00 (midday), 23:30:00 (11:30pm).

## 3 CODING SCHEMES

### 3.1 Introduction

A number of data elements defined in FpML are restricted to holding one of a limited set of possible values, e.g. currency, business centers, etc. Such restricted sets of values are frequently referred to as domains.

In FpML, two different codings of domains are used. Domains that are small and not expected to change during the life of the specification are coded using XML schema enumerations. These domains are described elsewhere, in particular in the fpml-enum schema file. Other domains are coded using a strategy that has been defined by the Architecture Working Group, referred to as 'Schemes'. Each Scheme is associated with a URI. Coding Schemes can be categorized as one of the following:

- An external coding Scheme, which has a well-known URI. In this case the URI is assigned by an external body, and may or may not have its own versioning, date syntax and semantics. The external body may be an open standards organization, or it may be a market participant. It's worth stating that a scheme provides alternate identifiers for one identity. However it is not used to identify things other than the identity of the thing that contains it.
- An external coding Scheme, which does not have a well-known URI. In this case FpML assigns a URI as a proxy to refer to the concept of the external Scheme, but this URI will not be versioned or dated
- An FpML-defined coding Scheme. In this case the Scheme is fully under FpML control and the URI will change reflecting newer versions and revisions as the scheme evolves and changes.

In this section, the FpML-controlled Schemes and their associated URIs are defined, as well as URIs assigned by FpML to external coding schemes. The URI construction follows the FpML Architecture Version 2.0 recommendation.

Note that FpML does not define a coding Scheme or URI for the following Schemes:

- Additional Data (additionalDataScheme)
- Conversation Identifier (conversationIdScheme)
- Event Identifier (eventIdScheme)
- Future Identifier (futureIdScheme)
- Index Name (indexNameScheme)
- Index Identifier (indexIdScheme)
- Language (languageScheme)
- Link Identifier (linkIdScheme)
- Message Identifier (messageIdScheme)
- MIME Type (mimeTypeScheme)
- Payment Type (paymentTypeScheme)
- Product Identifier (productIdScheme)
- Rate Source Page (rateSourcePageScheme)
- Reference Amount (referenceAmountScheme)
- Trade Identifier (tradeIdScheme)
- Trade Status (tradeStatusScheme)
- Trader (traderScheme)
- Portfolio Name (portfolioNameScheme)
- Query Parameter Identifier (queryParameterIdScheme)
- Reference Bank Identifier (referenceBankIdScheme)
- Resource Identifier (resourceIdScheme)
- Type (typeScheme)
- Validation (validationScheme)

These are currently assumed to be specific to individual organizations or FpML based implementations. Although the initial set of Schemes are defined in this document we expect that new versions of Schemes will be released from time to time and published separately. Key benefits of using Schemes are that they allow:

- enumerations to be revised without requiring a re-issue of the FpML schema files
- alternate Schemes to be used without requiring changes to the FpML schema files.

### **3.2 Coding Schemes in XML Format**

- Coding Schemes (.zip file) - List of internal coding schemes defined in XML format.

## 4 Scheme Definitions

## 4.1 assetMeasureScheme

### Definition:

The type of measure about an asset. Used for describing valuation, sensitivity, and risk measures.

### URI:

<http://www.fpml.org/coding-scheme/asset-measure-5-0>

### Coding Scheme

CODE	SOURCE	DESCRIPTION
AccruedCoupon	FpML	The coupon accrued on the underlying bonds from that the most recent bond coupon payment date until the valuation date.
AccruedInterest	FpML	The value of interest accrued from the previous payment to the valuation date.
AccruedInterestResetPrice	FpML	The value of interest accrued for price at last Reset.
AverageExposure	FpML	The average exposure of this trade over its lifetime
BucketedCreditSpreadSensitivity	FpML	Change in NPV/value caused by a point change shift in the credit spread.
BucketedDefaultProbabilitySensitivity	FpML	Change in NPV/value caused by a point change shift in the default probability.
BucketedInterestRateConvexity	FpML	Change in interest rate sensitivity caused by a single point change in the yield curve (IR Gamma).
BucketedInterestRateSensitivity	FpML	Change in NPV/value caused by a single point change in the yield curve (IR Delta).
BucketedInterestRateVolatilitySensitivity	FpML	Change in NPV/value caused by a point change shift in the volatility matrix (vega).
BucketedRecoveryRateSensitivity	FpML	Change in NPV/value caused by a point change shift in the credit default recovery rate.
CalculatedStrike	FpML	The effective strike price of the option as derived from the underlying asset swap. (Used for options on asset swaps).
CAPMBeta	FpML	Systematic risk = Ratio of expected return to expected return of the market
Cash	FpML	A monetary amount paid or received. For example, a monetary amount payable on the valuation date, or a monetary amount payable on another specified date, such as a payment date.
CashEquivalent	FpML	The CashEquivalentLocalCurrency converted to the reporting currency (e.g. USD) at the spot exchange rate.
CashEquivalentLocalCurrency	FpML	The aggregated equivalent FX position in a specific currency. This includes the NPVs payable in that currency, plus equivalent positions generated by trades' price sensitivity to FX rates.
CleanGrossCurrentMarketPrice	FpML	The price of an asset, expressed in par

		value, excluding accrued interest, excluding commissions.
CleanGrossResetPrice	FpML	The reset price of an asset, expressed in par value, excluding accrued interest, excluding commissions.
CleanNetCurrentMarketPrice	FpML	The price of an asset, expressed in par value, excluding accrued interest, including commissions.
CleanNetResetPrice	FpML	The reset price of an asset, expressed in par value, excluding accrued interest, including commissions.
ConvexityAdjustment	FpML	An adjustment to the price of an instrument (such as a future) to compensate for its lack of convexity.
CreditSpread	FpML	The spread between the return of a credit instrument and of a corresponding risk free instrument.
CurrentNotional	FpML	The notional in effect on the valuation date.
DE@R	FpML	VAR for 1 day time horizon and 95% level of confidence
DirtyGrossCurrentMarketPrice	FpML	The price of an asset, expressed in par value, including accrued interest, excluding commissions.
DirtyGrossResetPrice	FpML	The reset price of an asset, expressed in par value, including accrued interest, excluding commissions.
DirtyNetCurrentMarketPrice	FpML	The price of an asset, expressed in par value, including accrued interest, including commissions.
DirtyNetResetPrice	FpML	The reset price of an asset, expressed in par value, including accrued interest, including commissions.
DividendYield	FpML	The dividend payout ratio, expressed as a decimal (e.g. 0.03 = 3%) per year.
EconomicCapital	FpML	Capital which is kept aside to compensate for unexpected losses due to credit risk. (VAR for 1 year and 99.97%)
EquityAccrual	FpML	Unrealized profit or loss on an equity price based stream or product. This is based on the difference between current market price and the reset/reference price.
EVA	FpML	Economic Value Added = (Spread + Fees - Expected loss - Operating cost) - ROE*(Capital at risk)
FundingOnRealizedGains	FpML	Funding-related interest charges associated with profit or loss on realized gains that have not yet been exchanged.
FXSpotSensitivity	FpML	Change in NPV/value caused by a change in FX spot rate
ImpliedVolatility	FpML	The implied volatility of the underlying asset from the valuation date to the expiration of the option.
InterestOnRealizedGains	FpML	Accrued interest on realized gains, for portfolio swap agreements where unwind profit/loss not exchanged until

		reset.
JensensAlpha	FpML	The average excess return on a portfolio relative to the excess return predicted by CAPM
LoanEquivalent	FpML	The loan equivalent exposure of this asset.
MarginalRisk	FpML	Change of a portfolio VAR with addition of a specified asset.
MarketQuote	FpML	The price of an instrument as quoted on an exchange or similar market.
ModifiedSharpeRatio	FpML	Sharpe ratio where both return and risk are defined relative to a benchmark portfolio
NPV	FpML	Net Present Value = sum of present values of all cash flows; excludes cash flows paid or received on the valuation date.
NPVLocalCurrency	FpML	NPV in the trade currency.
NumberOfUnderlyingSecurities	FpML	Used for bond positions to report the product of the open units and the par value of the bond.
ParallelShiftCreditSpreadSensitivity	FpML	Change in NPV/value caused by a parallel shift in the credit spread.
ParallelShiftDefaultProbabilitySensitivity	FpML	Change in NPV/value caused by a parallel shift in the default probability.
ParallelShiftInterestRateSensitivity	FpML	Change in NPV/value caused by a parallel shift in the yield curve/risk free rate of interest (IR Delta, rho).
ParallelShiftInterestRateVolatilitySensitivity	FpML	Change in NPV/value caused by a parallel shift in the volatility matrix (vega).
ParallelShiftRecoveryRateSensitivity	FpML	Change in NPV/value caused by a parallel shift in the credit default recovery rate.
PayNPV	FpML	NPV of cash flows for which the base counterparty pays.
PeakExposure	FpML	The peak/potential exposure of this trade over its lifetime
RAROC	FpML	Risk adjusted return on capital = (Adjusted income)/(Capital at risk)
RealizedTradingGains	FpML	Realized profit or loss that has not yet been exchanged. This is based on positions that have been closed out but not settled.
RealizedVariance	FpML	Realized variance between effective date and valuation date.
ReceiveNPV	FpML	NPV of cash flows for which the base counterparty receives.
RecoveryRate	FpML	The estimated amount that a creditor would receive in final satisfaction of the claims on a defaulted credit.
RegulatoryCapital	FpML	A provision for expected losses, required by the BIS.
ReturnOnEconomicCapital	FpML	The return from an asset expressed as a percentage of the amount of economic capital involved in holding that asset.
ReturnOnRegulatoryCapital	FpML	The return from an asset expressed as a percentage of the amount of regulatory capital involved in holding

		that asset.
RiskConcentration	FpML	Measures the amount of risk concentrated in individual counterparties, similar assets, common geographical locations, or common industries.
ROA	FpML	Return on assets = (Adjusted income)/Assets
RORAC	FpML	Return on risk-adjusted capital = (Adjusted income)/(BIS risk - based capital requirement)
SettlementFxRate	FpML	The FX rate used to compute a settlement amount.
SharpeRatio	FpML	The ratio between portfolio return in excess of the risk-free return and portfolio risk (measured as volatility)
SortinoRatio	FpML	Similar to Sharpe Ratio but risk defined as downside risk rather than portfolio variance.
TransactedGrossPrice	FpML	The price, exclusive of any commission, at which a transaction has been conducted.
TransactedNetPrice	FpML	The actual price (inclusive of commissions, when applicable) at which a transaction has been conducted.
TreatedRate	FpML	A rate following rate treatment procedures.
TreynorRatio	FpML	Similar to Sharpe Ratio but risk defined as CAPM systematic risk (beta) rather than portfolio variance.
ValuationDateChangeSensitivity	FpML	Change in NPV/value caused by a change in valuation date (theta).
VAR	FpML	Value at Risk is the amount of money that could be lost over a pre-defined period of time with a given level of confidence.
Volatility	FpML	The underlying price volatility used for calculating the value of this asset.

## 4.2 brokerConfirmationTypeScheme

### Definition:

Defines the type of Broker Confirm the FpML trade represents.

### URI:

<http://www.fpml.org/coding-scheme/broker-confirmation-type-4-0>

### Coding Scheme

CODE	SOURCE	DESCRIPTION
ABX	FpML	Broker Confirmation Type representing ABX index trades.
AsiaCorporate	FpML	Broker Confirmation Type of Asia Corporate.
AsiaSovereign	FpML	Broker Confirmation Type of Asia Sovereign.
AustraliaCorporate	FpML	Broker Confirmation Type of Australia Corporate.
AustraliaSovereign	FpML	Broker Confirmation Type of Australia Sovereign.
CDXEmergingMarketsDiversifiedTranche	FpML	Broker Confirmation Type for Dow Jones CDX Emerging Markets Diversified Tranche Transactions.
CDXTranche	FpML	Broker Confirmation Type for Dow Jones CDX Tranche Transactions.
CMBX	FpML	Broker Confirmation Type representing CMBX index trades.
DJ.CDX.EM	FpML	Broker Confirmation Type for CDS Index trades relating to Dow Jones CDX.EM index series.
DJ.CDX.NA	FpML	Broker Confirmation Type for CDS Index trades relating to Dow Jones CDX.NA.IG and Dow Jones CDX.NA.HY index series.
EmergingEuropeanAndMiddleEasternSovereign	FpML	Broker Confirmation Type of Emerging European and Middle Eastern Sovereign.
EmergingEuropeanCorporate	FpML	Broker Confirmation Type for EMERGING EUROPEAN CORPORATE.
EmergingEuropeanCorporateLPN	FpML	Matrix Transaction Type of EMERGING EUROPEAN CORPORATE LPN.
EuropeanCorporate	FpML	Broker Confirmation Type of European Corporate.
iTraxxAsiaExJapan	FpML	Broker Confirmation Type for iTraxx Asia Excluding Japan.
iTraxxAsiaExJapanTranche	FpML	Broker Confirmation Type for iTraxx Asia Excluding Japan Tranchered Transactions.
iTraxxAustralia	FpML	Broker Confirmation Type for iTraxx Australia.
iTraxxAustraliaTranche	FpML	Broker Confirmation Type for iTraxx Australia Tranchered Transactions.
iTraxxCJ	FpML	Broker Confirmation Type for iTraxx CJ.
iTraxxCJTranche	FpML	Broker Confirmation Type for iTraxx CJ

		Tranched Transactions.
iTraxxEurope	FpML	Broker Confirmation Type for iTraxx Europe.
iTraxxEuropeTranche	FpML	Broker Confirmation Type for iTraxx Europe Tranched Transactions.
iTraxxLevX	FpML	Broker Confirmation Type for iTraxx LevX.
iTraxxSDI75	FpML	Broker Confirmation Type for iTraxx SDI 75 Transactions.
JapanCorporate	FpML	Broker Confirmation Type of Japan Corporate.
JapanSovereign	FpML	Broker Confirmation Type of Japan Sovereign.
LatinAmericaCorporate	FpML	Broker Confirmation Type of Latin America Corporate.
LatinAmericaCorporateBond	FpML	Broker Confirmation Type for LATIN AMERICA CORPORATE B.
LatinAmericaCorporateBondOrLoan	FpML	Broker Confirmation Type for LATIN AMERICA CORPORATE BL.
LatinAmericaSovereign	FpML	Broker Confirmation Type of Latin America Sovereign.
NewZealandCorporate	FpML	Broker Confirmation Type of New Zealand Corporate.
NewZealandSovereign	FpML	Broker Confirmation Type of New Zealand Sovereign.
NorthAmericanCorporate	FpML	Broker Confirmation Type of North American Corporate.
SingaporeCorporate	FpML	Broker Confirmation Type of Singapore Corporate.
SingaporeSovereign	FpML	Broker Confirmation Type of Singapore Sovereign.
SubordinatedEuropeanInsuranceCorporate	FpML	Broker Confirmation Type of Subordinated European Insurance Corporate.
WesternEuropeanSovereign	FpML	Broker Confirmation Type of Western European Sovereign.

## 4.3 businessCenterScheme

### Definition:

A financial business center location

### URI:

<http://www.fpml.org/coding-scheme/business-center-6-4>

### Description

In general, the codes are based on the ISO country code and the English name of the location.

Additional location codes can be built according to the following rules. The first two characters represent the ISO country code, the next two characters represent a) if the location name is one word, the first two letters of the location b) if the location name consists of at least two words, the first letter of the first word followed by the first letter of the second word.

There are exceptions to this rule. For example, the TARGET (Trans-European Automated Real-time Gross settlement Express Transfer system) business center for Euro settlement has a code of EUTA.

This coding scheme is currently consistent with the S.W.I.F.T. Financial Center scheme used in the MT340/MT360/MT361 message definitions, although FpML controls the Business Center Scheme and it should not be assumed that both schemes will remain synchronized.

### Coding Scheme

CODE	SOURCE	DESCRIPTION
AEAD	FpML	Abu Dhabi
AEDU	FpML	Dubai
ARBA	FpML	Buenos Aires

## 4.4 cashflowTypeScheme

### Definition:

The type of cash flows associated with OTC derivatives contracts and their lifecycle events.

### URI:

<http://www.fpml.org/coding-scheme/cashflow-type-2-0>

### Coding Scheme

CODE	SOURCE	DESCRIPTION
AmendmentFee	FpML	A cash flow associated with an amendment lifecycle event.
AssignmentFee	FpML	A cash flow resulting from the assignment of a contract to a new counterparty.
Coupon	FpML	A cash flow corresponding to the periodic accrued interests.
CreditEvent	FpML	A cashflow resulting from a credit event.
DividendReturn	FpML	A cash flow corresponding to the synthetic dividend of an equity underlying asset traded through a derivative instrument.
ExerciseFee	FpML	A cash flow associated with an exercise lifecycle event.
Fee	FpML	A generic term for describing a non-scheduled cashflow that can be associated either with the initial contract, with some later corrections to it (e.g. a correction to the day count fraction that has a cashflow impact) or with some lifecycle events. Fees that are specifically associated with termination and partial termination, increase, amendment, and exercise events are qualified accordingly.
IncreaseFee	FpML	A cash flow associated with an increase lifecycle event.
InterestReturn	FpML	A cash flow corresponding to the return of the interest rate portion of a derivative instrument that has different types of underlying assets, such as a total return swap.
PartialTerminationFee	FpML	A cash flow associated with a partial termination lifecycle event.
Premium	FpML	The premium associated with an OTC contract such as an option or a cap/floor.
PriceReturn	FpML	A cash flow corresponding to the return of the price portion of a derivative instrument that has different types of underlying assets, such as a total return swap.
PrincipalExchange	FpML	A cash flow which amount typically corresponds to the notional of the contract and that is exchanged between the parties on trade inception and

		reverted back when the contract is terminated.
TerminationFee	FpML	A cash flow associated with a termination lifecycle event.

## 4.5 clearanceSystemScheme

### Definition:

A clearance system

### URI:

<http://www.fpml.org/coding-scheme/clearance-system-1-0>

### Coding Scheme

CODE	SOURCE	DESCRIPTION
Clearstream	FpML	Clearstream International
CREST	FpML	CREST
DTCC	FpML	The Depository Trust and Clearing Corporation
Euroclear	FpML	Euroclear
MonteTitoli	FpML	Monte Titoli SPA

## 4.6 compoundingFrequencyScheme

### Definition:

The frequency at which a rate is compounded.

### URI:

<http://www.fpml.org/coding-scheme/compounding-frequency-1-0>

### Coding Scheme

CODE	SOURCE	DESCRIPTION
Annual	FpML	The curve represents annual compounding.
Continuous	FpML	The curve represents continuous compounding.
Daily	FpML	The curve represents daily compounding.

## 4.7 contractualDefinitionsScheme

### Definition:

Specifies a set of standard contract definitions relevant to the transaction

### URI:

<http://www.fpml.org/coding-scheme/contractual-definitions-3-2>

### Coding Scheme

CODE	SOURCE	DESCRIPTION
ISDA1991	FpML	ISDA 1991 Definitions
ISDA1996Equity	FpML	ISDA 1996 Equity Derivatives Definitions
ISDA1997GovernmentBond	FpML	ISDA 1997 Government Bond Option Definitions
ISDA1998FX	FpML	ISDA 1998 FX and Currency Option Definitions
ISDA1999Credit	FpML	ISDA 1999 Credit Derivatives Definitions
ISDA2000	FpML	ISDA 2000 Definitions
ISDA2002Equity	FpML	ISDA 2002 Equity Derivatives Definitions
ISDA2003Credit	FpML	ISDA 2003 Credit Derivatives Definitions
ISDA2004Novation	FpML	ISDA 2004 Novation Definitions
ISDA2006	FpML	ISDA 2006 Definitions
ISDA2006Inflation	FpML	ISDA 2006 Inflation Derivatives Definitions

## 4.8 contractual Supplement Scheme

### Definition:

Defines the supplements to a base set of ISDA Definitions that are applicable to the transaction.

### URI:

<http://www.fpml.org/coding-scheme/contractual-supplement-6-4>

### Coding Scheme

CODE	SOURCE	DESCRIPTION
ABX	FpML	Standard Terms Supplement for ABX Transactions.
ABXTranche	FpML	Standard Terms Supplement for Asset-Backed Tranche Transactions.
CDXEmergingMarketsDiversifiedTranche	FpML	Standard Terms Supplement for Dow Jones CDX Emerging Markets Diversified Tranche Transactions.
CDXTranche	FpML	Standard Terms Supplement for Dow Jones CDX Tranche Transactions.
CMBX	FpML	Standard Terms Supplement for CMBX Transactions.
ISDA1999CreditConvertibleExchangeableAccretingObliga	FpML	Supplement to the 1999 ISDA Credit Derivatives Definitions Relating to Convertible, Exchangeable or Accreting Obligations dated November 9, 2001.
ISDA1999CreditRestructuring	FpML	Restructuring Supplement to the 1999 ISDA Credit Derivatives Definitions dated May 11, 2001.
ISDA1999CreditSuccessorAndCreditEvents	FpML	Supplement Relating to Successor and Credit Events to the 1999 ISDA Credit Derivatives Definitions dated November 28, 2001.
ISDA2003AdditionalProvisionsLPN	FpML	Additional Provisions for LPN dated December 6, 2007.
ISDA2003Credit2005MatrixSupplement	FpML	2005 Matrix Supplement to the 2003 ISDA Credit Derivatives.
ISDA2003CreditArgentineRepublic	FpML	Additional Provisions for the Argentine Republic: Excluded Obligations and Excluded Deliverable Obligations dated December 21, 2005.
ISDA2003CreditMay2003	FpML	May 2003 Supplement to the 2003 ISDA Credit Derivatives Definitions.
ISDA2003CreditMonolineInsurers	FpML	Additional Provisions for Physically Settled Default Swaps Monoline Insurer as Reference Entity dated May 9, 2003.
ISDA2003CreditMonolineInsurers2005	FpML	Additional Provisions for Physically Settled Default Swaps Monoline Insurer as Reference Entity dated January 21, 2005.
ISDA2003CreditRepublicOfHungary	FpML	Additional Provisions for the Republic of Hungary: Obligation Characteristics and Deliverable Obligation Characteristics dated August 13, 2004.
ISDA2003CreditRepublicOfHungary2005	FpML	Additional Provisions for the Republic of Hungary: Obligation Characteristics and

		Deliverable Obligation Characteristics dated February 14, 2005.
ISDA2003CreditRussianFederation	FpML	Additional Provisions for the Russian Federation: Obligation Characteristics and Deliverable Obligation Characteristics dated August 13, 2004.
ISDA2003CreditUSMunicipals	FpML	Additional Provisions for Credit Derivative Transactions - U.S. Municipal Entity as Reference Entity dated September 17, 2004.
ISDA2003DeliveryRestrictions	FpML	Additional Provisions for Reference Entities with Delivery Restrictions dated February 1, 2007.
ISDA2003LPNReferenceEntities	FpML	Additional Provisions for LPN Reference Entities dated October 3, 2006.
ISDA2003SecuredDeliverableObligationCharacteristic	FpML	Additional Provisions for Secured Deliverable Obligation Characteristic dated June 16, 2006.
ISDA2003STMicroelectronicsNV	FpML	Additional Provisions for STMicroelectronics NV dated December 6, 2007.
ISDAMarch2004EquityCanadianSupplement	FpML	Canadian Supplement to the 2004 Americas Interdealer Master Equity Derivatives Confirmation Agreement dated March 29, 2004.
iTraxxAsiaExJapan	FpML	Standard Terms Supplement for iTraxx Asia Excluding Japan.
iTraxxAsiaExJapanTranche	FpML	Standard Terms Supplement for iTraxx Asia Excluding Japan Tranching Transactions.
iTraxxAustralia	FpML	Standard Terms Supplement for iTraxx Australia.
iTraxxAustraliaTranche	FpML	Standard Terms Supplement for iTraxx Australia Tranching Transactions.
iTraxxCJ	FpML	Standard Terms Supplement for iTraxx CJ.
iTraxxCJTranche	FpML	Standard Terms Supplement for iTraxx CJ Tranching Transactions.
iTraxxEuropeDealer	FpML	Standard Terms Supplement for iTraxx Europe Dealer Form.
iTraxxEuropeNonDealer	FpML	Standard Terms Supplement for iTraxx Europe Non-Dealer Form.
iTraxxEuropeTranche	FpML	Standard Terms Supplement for iTraxx Europe Tranching Transactions.
iTraxxLevX	FpML	Standard Terms Supplement for iTraxx LevX.
iTraxxSDI75Dealer	FpML	Standard Terms Supplement for iTraxx SDI 75 Dealer Transactions.
iTraxxSDI75NonDealer	FpML	Standard Terms Supplement for iTraxx SDI 75 Non-Dealer Transactions.
LCDX	FpML	Standard Terms Supplement for Syndicated Secured Loan Credit Default Swap Index Transactions.
LCDXTranche	FpML	Standard Terms Supplement for Syndicated Secured Loan Credit Default Swap Index Tranche Transactions.

## **4.9 countryScheme**

### **Definition:**

The code representation of a country.

### **URI:**

<http://www.fpml.org/ext/iso3166>

### **Description**

A valid 2 character country code as defined by the ISO standard 3166-1 alpha-2 - Codes for representation of countries <http://www.niso.org/standards/resources/3166.html>.

## 4.10 couponTypeScheme

### Definition:

Defines a scheme of values for specifying if the bond has a variable coupon, step-up/down coupon or a zero-coupon.

### URI:

<http://www.fpml.org/coding-scheme/coupon-type-1-0>

### Coding Scheme

CODE	SOURCE	DESCRIPTION
Fixed	FpML	Bond has fixed rate coupon.
Float	FpML	Bond has floating rate coupon.
Struct	FpML	Bond has structured coupon.

## 4.11 *creditSeniorityScheme*

### Definition:

Specifies the repayment precedence of a debt instrument.

### URI:

<http://www.fpml.org/coding-scheme/credit-seniority-1-0>

### Coding Scheme

CODE	SOURCE	DESCRIPTION
Senior	FpML	Top precedence.
SubLowerTier2	FpML	Subordinate, Lower Tier 2.
SubTier1	FpML	Subordinate Tier 1.
SubTier3	FpML	Subordinate, Tier 3.
SubUpperTier2	FpML	Subordinate, Upper Tier 2.

## 4.12 *creditSeniorityTradingScheme*

### Definition:

Specifies the seniority of the reference obligation used in a single name credit default swap trade. It overrides the `creditSeniorityScheme`.

### URI:

<http://www.fpml.org/coding-scheme/credit-seniority-trading-1-0>

### Coding Scheme

CODE	SOURCE	DESCRIPTION
Senior	FpML	Top precedence.
Subordinate	FpML	Subordinate

## **4.13 currencyScheme**

### **Definition:**

The code representation of a currency.

### **URI:**

<http://www.fpml.org/ext/iso4217-2001-08-15>

### **Description**

A valid currency code as defined by the ISO standard 4217 - Codes for representation of currencies and funds  
<http://www.iso.org/iso/en/prods-services/popstds/currencycodeslist.html>.

## 4.14 cutNameScheme

### Definition:

The specification of the cut name, or expiry date and time, for an FX OTC option.

### URI:

<http://www.fpml.org/coding-scheme/cut-name-1-0>

### Coding Scheme

CODE	SOURCE	DESCRIPTION
Comex	FpML	2:30 p.m. New York time.
ECB	FpML	1:30 p.m. London time.
LondonEveningGold	FpML	3:00 p.m. London time.
LondonEveningPgm	FpML	2:00 p.m. London time.
LondonMorningGold	FpML	10:30 a.m. London time.
LondonMorningPgm	FpML	9:45 a.m. London time.
Mexico	FpML	12:30 p.m. New York time.
NewYork	FpML	10:00 a.m. New York time.
NewYorkPgm	FpML	9:30 a.m. New York time.
SilverLondon	FpML	12:15 p.m. London time.

## 4.15 dayCountFractionScheme

### Definition:

Defines a scheme of values for specifying how the number of days between two dates is calculated for purposes of calculation of a fixed or floating payment amount and the basis for how many days are assumed to be in a year.

### URI:

<http://www.fpml.org/coding-scheme/day-count-fraction-2-1>

### Coding Scheme

CODE	SOURCE	DESCRIPTION
1/1	FpML	Per 2006 ISDA Definitions, Section 4.16. Day Count Fraction, paragraph (a) or Annex to the 2000 ISDA Definitions (June 2000 Version), Section 4.16. Day Count Fraction, paragraph (a).
30/360	FpML	Per 2006 ISDA Definitions, Section 4.16. Day Count Fraction, paragraph (f) or Annex to the 2000 ISDA Definitions (June 2000 Version), Section 4.16. Day Count Fraction, paragraph (e).
30E/360	FpML	Per 2006 ISDA Definitions, Section 4.16. Day Count Fraction, paragraph (g) or Annex to the 2000 ISDA Definitions (June 2000 Version), Section 4.16. Day Count Fraction, paragraph (f). Note that the algorithm defined for this day count fraction has changed between the 2000 ISDA Definitions and 2006 ISDA Definitions. See Introduction to the 2006 ISDA Definitions for further information relating to this change.
30E/360.ISDA	FpML	Per 2006 ISDA Definitions, Section 4.16. Day Count Fraction, paragraph (h). Note the algorithm for this day count fraction under the 2006 ISDA Definitions is designed to yield the same results in practice as the version of the 30E/360 day count fraction defined in the 2000 ISDA Definitions. See Introduction to the 2006 ISDA Definitions for further information relating to this change.
ACT/360	FpML	Per 2006 ISDA Definitions, Section 4.16. Day Count Fraction, paragraph (e) or Annex to the 2000 ISDA Definitions (June 2000 Version), Section 4.16. Day Count Fraction, paragraph (d).
ACT/365.FIXED	FpML	Per 2006 ISDA Definitions, Section 4.16. Day Count Fraction, paragraph (d) or Annex to the 2000 ISDA Definitions (June 2000 Version), Section 4.16. Day Count Fraction, paragraph (c).
ACT/ACT.AFB	FpML	The Fixed/Floating Amount will be calculated in accordance with the "BASE EXACT/EXACT" day count

		fraction, as defined in the "Definitions Communes plusieurs Additifs Techniques" published by the Association Francaise des Banques in September 1994.
ACT/ACT.ICMA	FpML	Per 2006 ISDA Definitions, Section 4.16. Day Count Fraction, paragraph (c)
ACT/ACT.ISDA	FpML	Per 2006 ISDA Definitions, Section 4.16. Day Count Fraction, paragraph (b) or Annex to the 2000 ISDA Definitions (June 2000 Version), Section 4.16. Day Count Fraction, paragraph (b). Note that going from FpML 2.0 Recommendation to the FpML 3.0 Trial Recommendation the code in FpML 2.0 'ACT/365.ISDA' became 'ACT/ACT.ISDA'.
ACT/ACT.ISMA	FpML	The Fixed/Floating Amount will be calculated in accordance with Rule 251 of the statutes, by-laws, rules and recommendations of the International Securities Market Association, as published in April 1999, as applied to straight and convertible bonds issued after December 31, 1998, as though the Fixed/Floating Amount were the interest coupon on such a bond.
BUS/252	FpML	The number of Business Days in the Calculation Period or Compounding Period in respect of which payment is being made divided by 252.

## 4.16 derivativeCalculationMethodScheme

### Definition:

Specifies the method by which a derivative is computed.

### URI:

<http://www.fpml.org/coding-scheme/derivative-calculation-method-1-0>

### Coding Scheme

CODE	SOURCE	DESCRIPTION
Analytic	FpML	The derivative is computed analytically, e.g. by a closed form analytical equation.
Numerical	FpML	The derivative is computed by other (non-perturbative) numerical means, such as a direct output from a numerical model.
Perturbation	FpML	The derivative is computed by a numerical difference method, ie. by numerically perturbing the input, recalculating the measure, and dividing by the amount of the perturbation.
Substitution	FpML	The derivative is computed by finite difference based on the substitution of a supplied pricing input, e.g. a bumped yield curve.

## 4.17 designatedPriorityScheme

### Definition:

Specifies the types of liens that can be associated with a loan facility. In practice there could be any number of liens. Practice shows that the number does not typically goes beyond 3.

### URI:

<http://www.fpml.org/coding-scheme/designated-priority-1-0>

### Coding Scheme

CODE	SOURCE	DESCRIPTION
FirstLienLoan	FpML	First lien.
SecondLienLoan	FpML	Second lien.
ThirdLienLoan	FpML	Third lien.
Unknown	FpML	It is unknown whether a lien is associated with a loan facility.

## **4.18 entityIdScheme**

### **Definition:**

A qualifier for the entity identifier that specifies which set of entity identifiers has been used to specify an entity.

### **URI:**

<http://www.fpml.org/spec/2003/entity-id-RED-1-0>

### **Description**

RED Entity Identifiers

## **4.19 *entityNameScheme***

### **Definition:**

A qualifier for the entity name that specifies which set of entity names has been used to specify an entity.

### **URI:**

<http://www.fpml.org/spec/2003/entity-name-RED-1-0>

### **Description**

RED Entity Names

## 4.20 entityTypeScheme

### Definition:

This specifies the reference entity types corresponding to a list of types defined in the ISDA First to Default documentation.

### URI:

<http://www.fpml.org/coding-scheme/entity-type-1-0>

### Coding Scheme

CODE	SOURCE	DESCRIPTION
Asian	FpML	Entity Type of Asian.
AustralianAndNewZealand	FpML	Entity Type of Australian and New Zealand.
EuropeanEmergingMarkets	FpML	Entity Type of European Emerging Markets.
Japanese	FpML	Entity Type of Japanese.
NorthAmericanHighYield	FpML	Entity Type of North American High Yield.
NorthAmericanInsurance	FpML	Entity Type of North American Insurance.
NorthAmericanInvestmentGrade	FpML	Entity Type of North American Investment Grade.
Singaporean	FpML	Entity Type of Singaporean.
WesternEuropean	FpML	Entity Type of Western European.
WesternEuropeanInsurance	FpML	Entity Type of Western European Insurance.

## **4.21 exchangeIdScheme**

### **Definition:**

A qualifier for the exchange identifier that specifies which set of exchange identifiers has been used to specify a securities or derivatives exchange.

### **URI:**

<http://www.fpml.org/spec/2002/exchange-id-MIC-1-0>

### **Description**

Market Identifier Code

### **Alternate URIs:**

#### **URI:**

<http://www.fpml.org/spec/2002/exchange-id-REC-1-0>

### **Description**

*Reuters Exchange Code*

## 4.22 floatingRateIndexScheme

### Definition:

ISDA Rate Options as published by ISDA in either the 2006 ISDA Definitions or the Annex to the 2000 Definitions, Section 7.1. Rate Options.

### URI:

## 4.23 governingLawScheme

### Definition:

Identification of the law governing the transaction.

### URI:

<http://www.fpml.org/coding-scheme/governing-law-1-0>

### Description

In general the codes are the ISO country code where the applicable law is the law of an entire country

For countries that have more than one legal regime the code is constructed from the two-character ISO country code followed by two characters indicating the legal regime. In the cases of Canada and the United States of America, these two characters are the conventional abbreviations for the provinces and states respectively. In the case of the United Kingdom, the first two characters are "GB" followed by two characters indicating the legal regime.

The following are examples of valid codes, not an exhaustive list.

### Coding Scheme

CODE	SOURCE	DESCRIPTION
CAAB	FpML	Alberta law
CABC	FpML	British Columbia Law
CAMN	FpML	Manitoba law
CAON	FpML	Ontario law
CAQC	FpML	Quebec law
DE	FpML	German law
FR	FpML	French law
GBEN	FpML	English law
GBGY	FpML	The law of the island of Guernsey
GBIM	FpML	The law of the Isle of Man
GBJY	FpML	The law of the island of Jersey
GBSC	FpML	Scottish law
JP	FpML	Japanese law
USCA	FpML	Californian law
USIL	FpML	Illinois law
USNY	FpML	New York law

## 4.24 indexAnnexSourceScheme

### Definition:

Defines a scheme of values for specifying the CDX index annex source.

### URI:

<http://www.fpml.org/coding-scheme/cdx-index-annex-source-1-0>

### Coding Scheme

CODE	SOURCE	DESCRIPTION
MasterConfirmation	FpML	As defined in the relevant form of Master Confirmation applicable to the confirmation of Dow Jones CDX indices.
Publisher	FpML	As defined in the relevant form of Master Confirmation applicable to the confirmation of Dow Jones CDX indices.

## **4.29 instrumentIdScheme**

### **Definition:**

A qualifier for the instrument identifier that specifies which set of instrument identifiers has been used to specify an instrument.

### **URI:**

<http://www.fpml.org/spec/2002/instrument-id-Bloomberg-1-0>

### **Description**

Bloomberg ticker symbol

### **Alternate URIs:**

#### **URI:**

<http://www.fpml.org/spec/2002/instrument-id-CUSIP-1-0>

### **Description**

Committee on Uniform Securities Identification Procedures

#### **URI:**

<http://www.fpml.org/spec/2002/instrument-id-ISIN-1-0>

### **Description**

International Securities Identification Number

#### **URI:**

<http://www.fpml.org/spec/2003/instrument-id-Reuters-RIC-1-0>

### **Description**

Reuters Instrument Code (RIC)

#### **URI:**

<http://www.fpml.org/spec/2003/instrument-id-RED-pair-1-0>

### **Description**

RED pair code

#### **URI:**

<http://www.fpml.org/spec/2002/instrument-id-SEDOL-1-0>

### **Description**

London Stock Exchange Daily Official List

#### **URI:**

<http://www.fpml.org/spec/2002/instrument-id-Sicovam-1-0>

### **Description**

Sicovam code

#### **URI:**

<http://www.fpml.org/coding-scheme/external/instrument-id-common-code-1-0>

**Description**

*Common Code for Euroclear/CEDEL*

### **4.30 interpolationMethodScheme**

**Definition:**

Specifies the type of interpolation used.

**URI:**

<http://www.fpml.org/coding-scheme/interpolation-method-1-0>

**Coding Scheme**

<b>CODE</b>	<b>SOURCE</b>	<b>DESCRIPTION</b>
LinearZeroYield	FpML	TBD

## 4.31 loanTypeScheme

### Definition:

Specifies a typology for loan facilities.

### URI:

<http://www.fpml.org/coding-scheme/facility-type-1-0>

### Coding Scheme

CODE	SOURCE	DESCRIPTION
BridgeLoan	FpML	Bridge loan.
LetterOfCredit	FpML	Letter of credit, i.e. commitment by a bank or syndicate to provide a certain amount of funding.
RevolvingLoan	FpML	Revolving loan.
SwinglineFunding	FpML	Swingline funding, which refers to the portion of revolving loan facility that can be funded without advance notice. Sometimes, the swingline is traded separately from the rest of the loan facility.
TermLoan	FpML	Term loan.
TradeClaim	FpML	Trade claim, i.e. claim on assets that result from a restructuring or bankruptcy.

## 4.32 localJurisdictionScheme

### Definition:

This overrides the countryScheme. Specifies the Local Jurisdiction that applies to a Transaction, for example for the purposes of defining which Local Taxes will apply.

### URI:

<http://www.fpml.org/coding-scheme/local-jurisdiction-1-0>

### Coding Scheme

CODE	SOURCE	DESCRIPTION
India	FpML	Indian Local Jurisdiction applies.
Indonesia	FpML	Indonesian Local Jurisdiction applies.
Korea	FpML	Korean Local Jurisdiction applies.
Malaysia	FpML	Malaysian Local Jurisdiction applies.
NotApplicable	FpML	No Local Jurisdiction applies to this Transaction.
Taiwan	FpML	Taiwanese Local Jurisdiction applies.

### 4.33 marketDisruptionScheme

#### Definition:

Defines the handling of a averaging date market disruption for an equity derivative transaction.

#### URI:

<http://www.fpml.org/coding-scheme/market-disruption-1-0>

#### Coding Scheme

CODE	SOURCE	DESCRIPTION
ModifiedPostponement	FpML	As defined in section 6.7 para (c) subpara (iii) of the ISDA 2002 Equity Derivative definitions.
Omission	FpML	As defined in section 6.7 para (c) subpara (i) of the ISDA 2002 Equity Derivative definitions.
Postponement	FpML	As defined in section 6.7 para (c) subpara (ii) of the ISDA 2002 Equity Derivative definitions.

## 4.34 masterAgreementTypeScheme

### Definition:

Defines the type of the master agreement governing the transaction.

### URI:

<http://www.fpml.org/coding-scheme/master-agreement-type-1-0>

### Coding Scheme

CODE	SOURCE	DESCRIPTION
AFB	FpML	AFB Master Agreement for Foreign Exchange and Derivatives Transactions
German	FpML	German Master Agreement for Financial derivatives and Addendum for Options on Stock Exchange Indices or Securities
ISDA1987	FpML	ISDA 1987 Master Agreement
ISDA1992	FpML	ISDA 1992 Master Agreement
ISDA2002	FpML	ISDA 2002 Master Agreement
Swiss	FpML	Swiss Master Agreement for OTC Derivatives Instruments

## 4.35 masterConfirmationTypeScheme

### Definition:

Defines the type of master confirmation agreement governing the transaction.

### URI:

<http://www.fpml.org/coding-scheme/master-confirmation-type-5-5>

### Coding Scheme

CODE	SOURCE	DESCRIPTION
2003CreditIndex	FpML	Used for CDS Index trades. Relevant Master Confirmation determined by the contents of the creditDefaultSwap element. Best practice is to use the most specific code that applies.
2004EquityEuropeanInterdealer	FpML	A privately negotiated European Interdealer Master Confirmation Agreement applies.
2005VarianceSwapEuropeanInterdealer	FpML	A privately negotiated European Interdealer Master Confirmation Agreement applies.
2006DividendSwapEuropean	FpML	A European Interdealer Master Confirmation Agreement not defined by ISDA, and modified by the parties to the transaction applies.
2006DividendSwapEuropeanInterdealer	FpML	A European Interdealer Master Confirmation Agreement not defined by ISDA applies.
DJ.CDX.EM	FpML	Used for CDS Index trades executed under the Dow Jones CDX Emerging Markets Master Confirmation.
DJ.CDX.EM.DIV	FpML	Used for CDS Index trades executed under the Dow Jones CDX Emerging Markets Diversified Master Confirmation.
DJ.CDX.NA	FpML	Used for CDS Index trades executed under the Dow Jones CDX Master Confirmation that covers CDX.NA.IG, CDX.NA.HY, and CDX.NA.XO.
DJ.iTraxx.Europe	FpML	Used for CDS Index trades executed under the Dow Jones iTraxx Europe Master Confirmation Agreement.
EquityAmericas	FpML	A general reference to the types of Americas Master Confirmation Agreements. Use the more specific values to reference a specific type of Americas Master Confirmation Agreement.
EquityAsia	FpML	A general reference to the types of Asia Master Confirmation Agreements. Use the more specific values to reference a specific type of Asia Master Confirmation Agreement.
EquityEuropean	FpML	A general reference to the types of European Master Confirmation Agreements. Use the more specific

		values to reference a specific type of European Master Confirmation Agreement.
ISDA1999Credit	FpML	ISDA 1999 Master Credit Derivatives Confirmation Agreement
ISDA2003CreditAsia	FpML	ISDA 2003 Master Credit Derivatives Confirmation Agreement interpreted as if Asia had been specified as the relevant Transaction Type in the Transaction Supplement.
ISDA2003CreditAustraliaNewZealand	FpML	ISDA 2003 Master Credit Derivatives Confirmation Agreement interpreted as if Australia and New Zealand had been specified as the relevant Transaction Type in the Transaction Supplement.
ISDA2003CreditEuropean	FpML	ISDA 2003 Master Credit Derivatives Confirmation Agreement interpreted as if European had been specified as the relevant Transaction Type in the Transaction Supplement.
ISDA2003CreditJapan	FpML	ISDA 2003 Master Credit Derivatives Confirmation Agreement interpreted as if Japan had been specified as the relevant Transaction Type in the Transaction Supplement.
ISDA2003CreditNorthAmerican	FpML	ISDA 2003 Master Credit Derivatives Confirmation Agreement interpreted as if North American had been specified as the relevant Transaction Type in the Transaction Supplement.
ISDA2003CreditSingapore	FpML	ISDA 2003 Master Credit Derivatives Confirmation Agreement interpreted as if Singapore had been specified as the relevant Transaction Type in the Transaction Supplement.
ISDA2003CreditSovereignAsia	FpML	ISDA Sovereign 2003 Master Credit Derivatives Confirmation Agreement interpreted as if Asia had been specified as the relevant Transaction Type in the Transaction Supplement. The 2003 Sovereign Master Confirmation has been superceded by the 2004.
ISDA2003CreditSovereignCentralAndEasternEurope	FpML	ISDA Sovereign 2003 Master Credit Derivatives Confirmation Agreement interpreted as if Central and Eastern Europe had been specified as the relevant Transaction Type in the Transaction Supplement. The 2003 Sovereign Master Confirmation has been superceded by the 2004.
ISDA2003CreditSovereignJapan	FpML	ISDA Sovereign 2003 Master Credit Derivatives Confirmation Agreement interpreted as if Japan had been specified as the relevant Transaction Type in the Transaction Supplement. The 2003 Sovereign Master Confirmation has been superceded by the 2004.
ISDA2003CreditSovereignLatinAmerica	FpML	ISDA Sovereign 2003 Master Credit

		Derivatives Confirmation Agreement interpreted as if Latin America had been specified as the relevant Transaction Type in the Transaction Supplement. The 2003 Sovereign Master Confirmation has been superceded by the 2004.
ISDA2003CreditSovereignMiddleEast	FpML	ISDA Sovereign 2003 Master Credit Derivatives Confirmation Agreement interpreted as if Middle East had been specified as the relevant Transaction Type in the Transaction Supplement. The 2003 Sovereign Master Confirmation has been superceded by the 2004.
ISDA2003CreditSovereignWesternEurope	FpML	ISDA Sovereign 2003 Master Credit Derivatives Confirmation Agreement interpreted as if Western Europe had been specified as the relevant Transaction Type in the Transaction Supplement. The 2003 Sovereign Master Confirmation has been superceded by the 2004.
ISDA2004CreditSovereignAsia	FpML	ISDA Sovereign 2004 Master Credit Derivatives Confirmation Agreement interpreted as if Asia had been specified as the relevant Transaction Type in the Transaction Supplement.
ISDA2004CreditSovereignEmergingEuropeanAndMiddleE	FpML	ISDA Sovereign 2004 Master Credit Derivatives Confirmation Agreement interpreted as if Emerging European and Middle Eastern had been specified as the relevant Transaction Type in the Transaction Supplement.
ISDA2004CreditSovereignJapan	FpML	ISDA Sovereign 2004 Master Credit Derivatives Confirmation Agreement interpreted as if Japan had been specified as the relevant Transaction Type in the Transaction Supplement.
ISDA2004CreditSovereignLatinAmerican	FpML	ISDA Sovereign 2004 Master Credit Derivatives Confirmation Agreement interpreted as if Latin American had been specified as the relevant Transaction Type in the Transaction Supplement.
ISDA2004CreditSovereignWesternEuropean	FpML	ISDA Sovereign 2004 Master Credit Derivatives Confirmation Agreement interpreted as if Western European had been specified as the relevant Transaction Type in the Transaction Supplement.
ISDA2004EquityAmericasInterdealer	FpML	ISDA 2004 Americas Interdealer Master Equity Derivatives Confirmation Agreement applies.
ISDA2005EquityAsiaExcludingJapanInterdealer	FpML	ISDA 2005 AEJ (Asia Excluding Japan) Interdealer Master Equity Derivatives Confirmation Agreement applies.
ISDA2005EquityJapaneseInterdealer	FpML	The ISDA 2005 Japanese Interdealer Master Equity Derivatives Confirmation

		Agreement applies.
ISDA2006VarianceSwapJapaneseInterdealer	FpML	ISDA 2006 Variance Swap Japanese Interdealer Confirmation Agreement applies.
ISDA2007EquityEuropean	FpML	The ISDA 2007 European Master Equity Derivatives Confirmation Agreement applies.
ISDA2007EquityFinanceSwapEuropean	FpML	The EFS (Equity Share Finance Swap) Annex to the ISDA 2007 European Master Equity Derivatives Confirmation Agreement applies.
ISDA2007VarianceSwapAmericas	FpML	The ISDA 2007 Americas Master Variance Swap Confirmation Agreement applies.
ISDA2007VarianceSwapAsiaExcludingJapan	FpML	The ISDA 2007 AEJ Master Variance Swap Confirmation Agreement applies.
ISDA2007VarianceSwapEuropean	FpML	The ISDA 2007 European Variance Swap Master Confirmation Agreement applies.

## 4.36 matrixTermScheme

### Definition:

Defines a scheme of transaction types specified in the Credit Derivatives Physical Settlement Matrix.

### URI:

<http://www.fpml.org/coding-scheme/credit-matrix-transaction-type-3-0>

### Coding Scheme

CODE	SOURCE	DESCRIPTION
AsiaCorporate	FpML	Matrix Transaction Type of ASIA CORPORATE.
AsiaSovereign	FpML	Matrix Transaction Type of ASIA SOVEREIGN.
AustraliaCorporate	FpML	Matrix Transaction Type of AUSTRALIA CORPORATE.
AustraliaSovereign	FpML	Matrix Transaction Type of AUSTRALIA SOVEREIGN.
EmergingEuropeanAndMiddleEasternSovereign	FpML	Matrix Transaction Type of EMERGING EUROPEAN AND MIDDLE EASTERN SOVEREIGN.
EmergingEuropeanCorporate	FpML	Matrix Transaction Type of EMERGING EUROPEAN CORPORATE.
EmergingEuropeanCorporateLPN	FpML	Matrix Transaction Type of EMERGING EUROPEAN CORPORATE LPN.
EuropeanCorporate	FpML	Matrix Transaction Type of EUROPEAN CORPORATE.
JapanCorporate	FpML	Matrix Transaction Type of JAPAN CORPORATE.
JapanSovereign	FpML	Matrix Transaction Type of JAPAN SOVEREIGN.
LatinAmericaCorporate	FpML	Matrix Transaction Type of LATIN AMERICA CORPORATE.
LatinAmericaCorporateBond	FpML	Matrix Transaction Type of LATIN AMERICA CORPORATE B.
LatinAmericaCorporateBondOrLoan	FpML	Matrix Transaction Type of LATIN AMERICA CORPORATE BL.
LatinAmericaSovereign	FpML	Matrix Transaction Type of LATIN AMERICA SOVEREIGN.
NewZealandCorporate	FpML	Matrix Transaction Type of NEW ZEALAND CORPORATE.
NewZealandSovereign	FpML	Matrix Transaction Type of NEW ZEALAND SOVEREIGN.
NorthAmericanCorporate	FpML	Matrix Transaction Type of NORTH AMERICAN CORPORATE.
SingaporeCorporate	FpML	Matrix Transaction Type of SINGAPORE CORPORATE.
SingaporeSovereign	FpML	Matrix Transaction Type of SINGAPORE SOVEREIGN.
SubordinatedEuropeanInsuranceCorporate	FpML	Matrix Transaction Type of SUBORDINATED EUROPEAN INSURANCE CORPORATE.
WesternEuropeanSovereign	FpML	Matrix Transaction Type of WESTERN EUROPEAN SOVEREIGN.

## 4.37 *matrixTypeScheme*

### Definition:

Defines a scheme of values for identifying the form of applicable matrix.

### URI:

<http://www.fpml.org/coding-scheme/matrix-type-1-0>

### Coding Scheme

CODE	SOURCE	DESCRIPTION
CreditDerivativesPhysicalSettlementMatrix	FpML	The ISDA-published Credit Derivatives Physical Settlement Matrix.
SettlementMatrix	FpML	The ISDA-published 2000 ISDA Definitions Settlement Matrix for Early Terminations and Swaptions.

## 4.38 mortgageSectorScheme

### Definition:

Specifies a mortgage typology.

### URI:

<http://www.fpml.org/coding-scheme/mortgage-sector-1-0>

### Coding Scheme

CODE	SOURCE	DESCRIPTION
ABS	FpML	Asset Backed Security.
CDO	FpML	Collateralized Debt Obligation.
CMBS	FpML	Commercial Mortgage Backed Security.
RMBS	FpML	Residential Mortgage Backed Security.

## **4.39 partyIdScheme**

### **Definition:**

The code for identification of parties involved in a trade.

### **URI:**

<http://www.fpml.org/ext/iso9362>

### **Description**

Valid bank identifier codes (BICs) as defined by the ISO standard 9362 - Bank identifier codes (BIC)

S.W.I.F.T is the designated authority for the assignment of BIC codes. They maintain an online BIC directory at <http://www.swift.com>

### **Alternate URIs:**

#### **URI:**

<http://www.fpml.org/ext/duns-numbers>

### **Description**

*The DUNS number is D&B's distinctive 9-digit identification sequence and is an internationally recognized company identifier for EDI and global electronic commerce transactions. (<http://www.dnb.com>)*

#### **URI:**

<http://www.fpml.org/ext/reuters-dealer-codes>

### **Description**

*The Reuters dealing code is a unique 4-character code assigned by Reuters that identifies a particular party and are commonly used to identify a company in various types of financial transactions*

## 4.40 *perturbationTypeScheme*

### Definition:

Specifies the type of perturbation applied to compute a derivative perturbatively.

### URI:

<http://www.fpml.org/coding-scheme/perturbation-type-1-0>

### Coding Scheme

CODE	SOURCE	DESCRIPTION
Absolute	FpML	The perturbation is absolute, ie. it is ADDED to the original value.
Relative	FpML	The perturbation is relative, ie. it is MULTIPLIED by the original value.

## 4.41 positionStatusScheme

### Definition:

Indicates the status of the reconciliation of a position.

### URI:

<http://www.fpml.org/coding-scheme/position-status-1-0>

### Coding Scheme

CODE	SOURCE	DESCRIPTION
Alleged	FpML	No corresponding position was found in "your" submitted set.
Matched	FpML	Both sides have the same position information within matching policies.
Mismatched	FpML	Both sides have the same position, but there are differences greater than the acceptable tolerance in the matching policies.
Unmatched	FpML	No corresponding position was found in "the other party's" submitted set.

## 4.42 priceQuoteUnitsScheme

### Definition:

Specifies the units in which a price is quoted.

### URI:

<http://www.fpml.org/coding-scheme/price-quote-units-1-1>

### Coding Scheme

CODE	SOURCE	DESCRIPTION
BasisPointValue	FpML	The value (expressed in currency units) per basis point change in the underlying rate. Typically used for expressing sensitivity to interest rate changes ("IR delta" risk, "rho" risk).
BasisPointValuePerBasisPoint	FpML	The Basis Point Value (BPV) (expressed in currency units per basis point) per basis point change in the underlying rate. Typically used for expressing second order sensitivity to interest rate changes (IR "gamma" risk, "convexity").
BBL	FpML	Description: Barrel.
Discount	FpML	A discount factor expressed as a decimal, e.g. 0.95.
ExchangeRate	FpML	A dimensionless conversion rate, e.g. 1.2. Typically used for FX.
gal	FpML	Gallon.
GJ	FpML	Description: Gigajoule.
IRFuturesPrice	FpML	A IMM futures style price, e.g. 9750 is equivalent to 2.5%.
KL	FpML	Kiloliter.
KWH	FpML	Kilowatt-hour.
LogNormalVolatility	FpML	A log normal volatility, expressed in %/month [?] .
MMBTU	FpML	Million British Thermal Units.
MWH	FpML	Megawatt-hour.
ParValueDecimal	FpML	A price, expressed in percentage of face value as a decimal, e.g. 101.5.
ParValueFraction	FpML	A price, expressed in percentage of face value with fractions, e.g. 101 3/8. Normally used for quoting bonds.
Price	FpML	A price, expressed in currency units.
Rate	FpML	A yield (typically an interest rate) expressed as a decimal. I.e. 0.05 means 5%.
Shares	FpML	The number of units of stock. Typically used for expressing sensitivity to equity prices (equity "delta" risk).
t	FpML	Tonne.
ValuePerDay	FpML	The value (expressed in currency units) for a one day change in a valuation date. Typically used for expressing sensitivity to the passage of time ("theta" risk, "carry", etc.).

ValuePerPercent	FpML	The value (expressed in currency units) per percent change in the underlying rate. Typically used for expressing sensitivity to volatility changes ("vega" risk).
-----------------	------	---

## 4.43 *pricingInputTypeScheme*

### Definition:

Specifies the type of pricing structure represented.

### URI:

<http://www.fpml.org/coding-scheme/pricing-input-type-1-0>

### Coding Scheme

CODE	SOURCE	DESCRIPTION
AssetPrices	FpML	A representation of the prices of collection of assets (in any asset class).
CreditCurve	FpML	A representation of credit pricing at different maturities.
FXForecastCurve	FpML	A representation of forecast FX rates at different maturities.
Time	FpML	The valuation date or other time input.
VolatilityMatrix	FpML	A representation of the volatility of an asset (in any asset class).
YieldCurve	FpML	A representation of the interest rates (yields) at different maturities.

## 4.44 productTypeSimpleScheme

### Definition:

A simple product typology, focused on identifying the type of financial instrument, without characterizing its features.

### URI:

<http://www.fpml.org/coding-scheme/product-type-simple-1-2>

### Coding Scheme

CODE	SOURCE	DESCRIPTION
AssetSwap	FpML	A swap agreement where one leg mimics the return of the underlying asset. No transfer of asset takes place (sometimes the sale of the bond is included in the "asset swap construct").
BondOption	FpML	A contract that gives the buyer of the option the right to exercise it into the bond underlyer (or its cash equivalent) under specified conditions.
BulletPayment	FpML	Refers to one of two ways for repaying a loan; With a balloon loan, a balloon payment is paid back when the loan comes to its contractual maturity, e.g. reaches the deadline set to repayment at the time the loan was granted, representing the full loan amount (also called principal). Periodic interest payments are generally made throughout the life of the loan.
CapFloor	FpML	A contract that guarantees either a maximum (cap) or a minimum (floor) level of a variable interest rate reference.
ConvertibleBondOption	FpML	An option contract in which the underlying asset is a convertible bond.
CreditDefaultBasket	FpML	A swap agreement in which one party pays a periodic fee in return for a contingent payment by the other party following a credit event on a basket of credit entities.
CreditDefaultBasketTranche	FpML	A swap agreement in which one party pays a periodic fee in return for a contingent payment by the other party following a credit event on a Tranche of an Index of a basket of credit entities.
CreditDefaultIndex	FpML	A swap agreement in which one party pays a periodic fee in return for a contingent payment by the other party following a credit event on an Index of credit entities.
CreditDefaultIndexTranche	FpML	A swap agreement in which one party pays a periodic fee in return for a contingent payment by the other party following a credit event on a Tranche of an Index of credit entities.

CreditDefaultOption	FpML	An option to buy protection (payer option) or sell protection (receiver option) as a credit default swap on a specific reference credit with a specific maturity.
CreditDefaultSwap	FpML	A swap agreement in which one party pays a periodic fee in return for a contingent payment by the other party following a credit event on a reference entity, a specific reference obligation or a basket of such reference names.
CrossCurrencySwap	FpML	An interest rate swap agreement which interest streams are denominated in different currencies.
DividendSwap	FpML	TBD
EquityForward	FpML	A contract between two parties regarding the future value of the equity underlyer (or its cash equivalent).
EquityOption	FpML	A contract that gives the buyer of the option the right to exercise it into the equity underlyer (or its cash equivalent) under specified conditions.
FRA	FpML	Forward Rate Agreement, corresponding to an agreement between parties regarding the level of a variable interest rate at a future date.
FxForward	FpML	An agreement between two parties regarding the future value of a currency exchange rate.
FxOption	FpML	A contract that gives the buyer of the option the right to exercise it into the FX underlyer (or its cash equivalent) under specified conditions.
FxOptionStrategy	FpML	A transaction consisting of several component transactions, at least one of which is a foreign exchange option transaction.
FxSpot	FpML	A foreign exchange deal that consists of a bilateral contract between a party delivering a certain amount of a currency against receiving a certain amount of another currency from a second counterparty, based on an agreed exchange rate.
FxSwap	FpML	A financial instrument that corresponds to the combination of an FX spot and an FX forward transactions.
InflationSwap	FpML	A swap agreement where one leg references an inflation index while the other one will typically reference a variable interest rate.
InterestRateSwap	FpML	A swap agreement which consists in swapping interest rate streams, whatever the type of interest rate references that are being used (i.e. float vs. float swaps, also known as basis swaps, are included in this category).
InterestRateSwaption	FpML	An option to enter into an interest rate

		swap.
TermDeposit	FpML	The simple commoditized term deposit that is typically a trade with a tenor of 1-year or less with no interim interest payments.
TotalReturnSwap	FpML	A swap agreement in which one party transfers the economic performance of a reference asset to the other party, typically in the exchange of the financing cost of this asset.
VarianceSwap	FpML	A financial derivative instrument whose price is a function of the variance of the price of the underlying.

## 4.45 queryParameterOperatorScheme

### Definition:

Specifies the query parameter operator.

### URI:

<http://www.fpml.org/coding-scheme/query-parameter-operator-1-0>

### Coding Scheme

CODE	SOURCE	DESCRIPTION
Equals	FpML	The equals operator.
GreaterThan	FpML	The greater than operator.
LessThan	FpML	The less than operator.
NotEquals	FpML	The not equals operator.

## 4.46 quoteTimingScheme

### Definition:

Specifies the type of the time of the quote.

### URI:

<http://www.fpml.org/coding-scheme/quote-timing-1-0>

### Coding Scheme

CODE	SOURCE	DESCRIPTION
Close	FpML	The quotation represents the end of day/market close.
High	FpML	The quotation represents the highest value obtained during the day.
Low	FpML	The quotation represents the lowest value obtained during the day.
Open	FpML	The quotation represents the beginning of day/market open.

## 4.47 reasonCodeScheme

### Definition:

Defines a list of machine interpretable error codes.

### URI:

<http://www.fpml.org/coding-scheme/reason-code-1-0>

### Coding Scheme

CODE	SOURCE	DESCRIPTION
100	FpML	Default transport error code.
101	FpML	Transport unavailable.
102	FpML	Unknown recipient/destination.
103	FpML	Delivered to wrong recipient.
104	FpML	Timeout - message delivered past expiration.
105	FpML	This type of message not accepted on this transport.
106	FpML	Message generation problem (e.g. data conversion).
110	FpML	Message corrupted (e.g. CRC failure).
111	FpML	Message text doesn't match digital signature hash.
200	FpML	Default message processing error code.
201	FpML	Lexical problem - not well-formed XML.
202	FpML	Unsupported character set.
203	FpML	Empty or missing content.
204	FpML	Content too large.
210	FpML	System unavailable.
211	FpML	Message component text doesn't match digital signature hash.
300	FpML	Default validation error code.
301	FpML	Unknown or unsupported DTD/Schema.
302	FpML	Unsupported FpML version.
303	FpML	Invalid FpML message - message doesn't validate w.r.t. specified DTD/schema.
304	FpML	Validation failure - unsupported message type.
305	FpML	Validation failure - mandatory FpML rule (a rule we say must always be followed).
306	FpML	Validation failure - master agreement rule (a rule 2 parties agree to follow).
307	FpML	Validation failure - business policy (a rule that only the recipient has).
308	FpML	Validation failure - unsupported product/asset.
310	FpML	Signature required - message content must be signed.
311	FpML	Signature not accepted - problem with message signer (cert revoked, unacceptable principal, etc.).
400	FpML	Default business process error code.
401	FpML	Don't know - unrecognized trade.
402	FpML	Suitability - trade can't be done for client

		or dealer suitability reasons.
403	FpML	Credit - trade can't be done for credit reasons.
404	FpML	Not interested - recipient chooses not to respond.
410	FpML	Message arrived too late - e.g. trade no longer exists.
411	FpML	Message expired - message arrived on time, but a response was not generated in time.

## 4.48 restructuringScheme

### Definition:

Specifies the form of the restructuring credit event that is applicable to the credit default swap.

### URI:

<http://www.fpml.org/coding-scheme/restructuring-1-0>

### Coding Scheme

CODE	SOURCE	DESCRIPTION
ModModR	FpML	2003 Definitions: Restructuring (Section 4.7) and Modified Restructuring Maturity Limitation and Conditionally Transferable Obligation (Section 2.33) apply.
ModR	FpML	1999 Definitions: Restructuring definition and May 2001 Restructuring supplement apply. Note that the 1999 Restructuring definition can be altered on a bilateral basis with the November 2001 Successor Supplement. 2003 Definitions: Restructuring (Section 4.7) and Restructuring Maturity Limitation and Fully Transferable Obligation (Section 2.32) apply.
R	FpML	Restructuring as defined in the applicable ISDA Credit Derivatives Definitions. (1999 or 2003). Note that the 1999 Restructuring definition can be altered on a bilateral basis with the November 2001 Successor Supplement.

## **4.49 routingIdCodeScheme**

### **Definition:**

The specification of the routing id code, which can be used to determine the coding convention for the settlement.

### **URI:**

<http://www.fpml.org/ext/iso9362>

## 4.50 *scheduledDateTypeScheme*

### Definition:

Defines the type of each scheduled date that is reported.

### URI:

<http://www.fpml.org/coding-scheme/scheduled-date-type-1-0>

### Coding Scheme

CODE	SOURCE	DESCRIPTION
AccrualStart	FpML	Date interest first starts accruing. In most cases, this will be the effective date.
Effective	FpML	The effective date of the swap leg. This is useful when the information is not directly included in the swap stream (for example, in certain equity swaps).
FinalPayment	FpML	The date of the final payment defined by this asset. The amount of the payment, if known, could be represented by an associated value of measure type "Cash".
FirstPayment	FpML	The date of the first payment defined by this asset. The amount of the payment, if known, could be represented by an associated value of measure type "Cash".
NextPayment	FpML	The date of the next upcoming payment defined by this asset, on or after the valuation date. The amount of the payment, if known, could be represented by an associated value of measure type "Cash".
NextReset	FpML	The date of the next upcoming reset in this stream, after the valuation date.
PreviousPayment	FpML	The date of the most recent payment defined by this asset prior to the valuation date. The amount of the payment could be represented by an associated value of measure type "Cash".
PreviousReset	FpML	The date of the most recent reset in this stream, on or before the valuation date. The reset rate could be represented by an associated value of measure type "MarketQuote" (for an untreated rate), and/or one of measure type "TreatedRate" (for a treated rate).
Termination	FpML	The termination date of the swap leg. This is useful when the information is not directly included in the swap stream (for example, in certain equity swaps).

## 4.51 settledEntityMatrixSourceScheme

### Definition:

Used to specify the relevant settled entity matrix source.

### URI:

<http://www.fpml.org/coding-scheme/settled-entity-matrix-source-1-0>

### Coding Scheme

CODE	SOURCE	DESCRIPTION
ConfirmationAnnex	FpML	The Relevant Settled Entity Matrix shall be the list agreed for this purpose by the parties. The list is not included as part of the electronic confirmation.
NotApplicable	FpML	The term is not applicable.
Publisher	FpML	The Settled Entity Matrix published by the Index Publisher.

## 4.52 settlementMethodScheme

### Definition:

The specification of the method for settling a particular trade.

### URI:

<http://www.fpml.org/coding-scheme/settlement-method-1-0>

### Coding Scheme

CODE	SOURCE	DESCRIPTION
Chaps	FpML	To be settled via Chaps network.
ChipsABA	FpML	To be settled via Chips ABA.
ChipsUID	FpML	To be settled via Chips UID.
CLS	FpML	To be settled via CLS Bank.
DDA	FpML	To be settled over DDA account.
Fedwire	FpML	To be settled via U.S. Fedwire.
SWIFT	FpML	To be settled via SWIFT network.

## 4.53 settlementPriceSourceScheme

### Definition:

The source from which the settlement price is to be obtained.

### URI:

<http://www.fpml.org/coding-scheme/settlement-price-source-1-0>

### Coding Scheme

CODE	SOURCE	DESCRIPTION
Bid	FpML	The bid price per share on the exchange at the valuation time on the valuation date
Mid	FpML	The mid-market price per share on the exchange at the valuation time on the valuation date
NASDAQ	FpML	An amount equal to the arithmetic average of the two prices constituting the Bid/Offer Spread. "Bid/Offer Spread" means the highest bid price per share and the corresponding lowest offer price per share last published prior to or at the expiration time on the expiration date.
Offer	FpML	The offer price per share on the exchange at the valuation time on the valuation date
OfficialClose	FpML	(i) The published official closing price of the shares on the exchange on the valuation date, or (ii) the official closing level of the index, as published by the index sponsor, on the valuation date
OfficialSettlement	FpML	The official settlement price (however described under the rules of the relevant exchange or its clearing house) on maturity of any of the relevant exchange-traded contracts published by the exchange or its clearing house. For this purpose, exchange-traded contract shall mean a future or listed option contract on the Index whose delivery date is expected to be on the valuation date
PrezzoDiRiferimento	FpML	The official reference price per share quoted by the exchange on the exchange business day immediately prior to the expiration date equal to the weighted average of the last 10% traded volume on the share

## 4.54 settlementRateOptionScheme

### Definition:

Defines a scheme of settlement rate options specified in the Annex A to the 1998 FX and Currency Option Definitions.

### URI:

<http://www.fpml.org/coding-scheme/settlement-rate-option-2-1>

### Coding Scheme

CODE	SOURCE	DESCRIPTION
ARS.BNAR/ARS01	FpML	The Spot Rate for a Rate Calculation Date will be the Argentine Peso/U.S. Dollar Specified Rate, expressed as the amount of Argentine Pesos per one U.S. Dollar, for settlement on the same day (or, if such day is not a Business Day in New York, for settlement on the first succeeding day that is a Business Day in both Buenos Aires and New York) which appears on the Reuters Screen BNAR Page at the close of business in Buenos Aires on that Rate Calculation Date.
ARS.OFFICIAL.RATE/ARS02	FpML	The Spot Rate for a Rate Calculation Date will be the Argentine Peso/U.S. Dollar Specified Rate, expressed as the amount of Argentine Pesos per one U.S. Dollar, for settlement on the same day (or, if such day is not a Business Day in New York, for settlement on the first succeeding day that is a Business Day in both Buenos Aires and New York) quoted by the Banco Central de la Republica Argentina (in accordance with the Convertibility Law and Regulatory Decree No. 529/91 of April 1, 1991) at the Specified Time, if any, on that Rate Calculation Date.
BRL.BRBY/BRL01	FpML	The Spot Rate for a Rate Calculation Date will be the Brazilian Real/U.S. Dollar Specified Rate, expressed as the amount of Brazilian Reais per one U.S. Dollar, for settlement in two Business Days (where such days are Business Days in both Sao Paulo and New York) which appears on the Reuters Screen BRBY Page under the caption "INTBK FLTING (LAST)" at approximately 11:00 a.m., São Paulo time, on that Rate Calculation Date.
BRL.OFFICIAL.RATE/BRL02	FpML	The Spot Rate for a Rate Calculation Date will be the Brazilian Real/U.S. Dollar Specified Rate, expressed as the amount of Brazilian Reais per one U.S. Dollar, for settlement in two Business

		Days (where such days are Business Days in both São Paulo and New York) reported by the Banco Central do Brasil in the "Diário Oficial da União" on the first Business Day following that Rate Calculation Date.
BRL.PCOT-COMMERCIAL/BRL03	FpML	The Spot Rate for a Rate Calculation Date will be the Brazilian Real/U.S. Dollar commercial rate, expressed as the amount of Brazilian Reais per one U.S. Dollar, for settlement in two Business Days (where such days are Business Days in both São Paulo and New York) reported by the Banco Central do Brasil on SISBACEN Data System under transaction code PCOT-390, Option 3, at the Specified Time, if any, on that Rate Calculation Date.
BRL.PCOT-FLOATING/BRL04	FpML	The Spot Rate for a Rate Calculation Date will be the Brazilian Real/U.S. Dollar floating rate, expressed as the amount of Brazilian Reais per one U.S. Dollar, for settlement in two Business Days (where such days are Business Days in both São Paulo and New York) reported by the Banco Central do Brasil on SISBACEN Data System under transaction code PCOT-390, Option 3, at the Specified Time, if any, on that Rate Calculation Date.
BRL.PTAX-COMMERCIAL.BRFR/BRL06	FpML	The Spot Rate for a Rate Calculation Date will be the Brazilian Real/U.S. Dollar commercial rate, expressed as the amount of Brazilian Reais per one U.S. Dollar, for settlement in two Business Days (where such days are Business Days in both São Paulo and New York) reported by the Banco Central do Brasil which appears on the Reuters Screen BRFR Page at PTAX-800 as of 11:00 a.m., São Paulo time, on the first Business Day following that Rate Calculation Date. 23
BRL.PTAX-COMMERCIAL/BRL05	FpML	The Spot Rate for a Rate Calculation Date will be the Brazilian Real/U.S. Dollar commercial rate, expressed as the amount of Brazilian Reais per one U.S. Dollar, for settlement in two Business Days (where such days are Business Days in both São Paulo and New York) reported by the Banco Central do Brasil on SISBACEN Data System under transaction code PTAX-800 ("Consultas de Câmbio" or Exchange Rate Inquiry), Option 5 ("Cotacões para Contabilidade" or Rates for Accounting Purposes) market type "L" (corresponding to U.S. Dollars traded in the foreign exchange market

		segment officially denominated "Livre" and commonly known as "Comercial") as of 7:30 p.m., São Paulo time, on that Rate Calculation Date.
BRL.PTAX-FLOATING.BRFR/BRL08	FpML	The Spot Rate for a Rate Calculation Date will be the Brazilian Real/U.S. Dollar floating rate, expressed as the amount of Brazilian Reais per one U.S. Dollar, for settlement in two Business Days (where such days are Business Days in both São Paulo and New York) reported by the Banco Central do Brasil on the SISBACEN Data System which appears on the Reuters Screen BRFR Page at PTAX-800 as of 11:00 a.m., São Paulo time, on the first Business Day following that Rate Calculation Date.
BRL.PTAX-FLOATING/BRL07	FpML	The Spot Rate for a Rate Calculation Date will be the Brazilian Real/U.S. Dollar floating rate, expressed as the amount of Brazilian Reais per one U.S. Dollar, for settlement in two Business Days (where such days are Business Days in both São Paulo and New York) reported by the Banco Central do Brasil on SISBACEN Data System under transaction code PTAX- 800 ("Consultas de Câmbio" or Exchange Rate Inquiry), Option 5 ("Cotacões para Contabilidade" or Rates for Accounting Purposes) market type "F" (corresponding to U.S. Dollars traded in the foreign exchange market segment officially denominated "Flutuante") as of 7:30 p.m., São Paulo time, on that Rate Calculation Date.
BRL.PTAX/BRL09	FpML	The Spot Rate for a Rate Calculation Date will be the Brazilian Real/U.S. Dollar offered rate for U.S. Dollars, expressed as the amount of Brazilian Reais per one U.S. Dollar, for settlement in two Business Days reported by the Banco Central do Brasil on SISBACEN Data System under transaction code PTAX-800 ("Consulta de Cambio" or Exchange Rate Inquiry), Option 5 ("Cotacoes para Contabilidade" or "Rates for Accounting Purposes") by approximately 6:00 p.m., Sao Paulo time, on that Rate Calculation Date.
CLP.BCCH/CLP01	FpML	The Spot Rate for a Rate Calculation Date will be the Chilean Peso/U.S. Dollar observado rate, expressed as the amount of Chilean Pesos per one U.S. Dollar, for settlement on the same day (or, if such day is not a Business Day in New York, for settlement on the first succeeding day that is a Business Day in both Santiago and New York)

		reported by the Banco Central de Chile which appears on the Reuters Screen BCCH Page under the caption "OBSERVADO" at 10:00 a.m., Santiago time, on the first Business Day following that Rate Calculation Date.
CLP.CHILD-INFORMAL/CLP02	FpML	The Spot Rate for a Rate Calculation Date will be the Chilean Peso/U.S. Dollar informal rate, expressed as the amount of Chilean Pesos per one U.S. Dollar, for settlement on the same day (or, if such day is not a Business Day in New York, for settlement on the first succeeding day that is a Business Day in both Santiago and New York) of the informal exchange market which appears on the Reuters Screen CHILD Page at the Specified Time, if any, on that Rate Calculation Date.
CLP.CHILD-INTERBANK/CLP03	FpML	The Spot Rate for a Rate Calculation Date will be the Chilean Peso/U.S. Dollar interbank rate, expressed as the amount of Chilean Pesos per one U.S. Dollar, for settlement on the same day (or, if such day is not a Business Day in New York, for settlement on the first succeeding day that is a Business Day in both Santiago and New York) reported by the Banco Central de Chile for the formal exchange market which appears on the Reuters Screen CHILD Page at the Specified Time, if any, on that Rate Calculation Date.
CLP.CHILD-OBSERVADO/CLP04	FpML	The Spot Rate for a Rate Calculation Date will be the Chilean Peso/U.S. Dollar observado rate, expressed as the amount of Chilean Pesos per one U.S. Dollar, for settlement on the same day (or, if such day is not a Business Day in New York, for settlement on the first succeeding day that is a Business Day in both Santiago and New York) reported by the Banco Central de Chile which appears on the Reuters Screen CHILD Page on the first Business Day following that Rate Calculation Date.
CLP.CHILG-INFORMAL/CLP05	FpML	The Spot Rate for a Rate Calculation Date will be the Chilean Peso/U.S. Dollar informal rate, expressed as the amount of Chilean Pesos per one U.S. Dollar, for settlement on the same day (or, if such day is not a Business Day in New York, for settlement on the first succeeding day that is a Business Day in both Santiago and New York) of the informal exchange market which appears on the Reuters Screen CHILG Page at the Specified Time, if any, on that Rate Calculation Date.

CLP.CHILG-INTERBANK/CLP06	FpML	The Spot Rate for a Rate Calculation Date will be the Chilean Peso/U.S. Dollar interbank rate, expressed as the amount of Chilean Pesos per one U.S. Dollar, for settlement on the same day (or, if such day is not a Business Day in New York, for settlement on the first succeeding day that is a Business Day in both Santiago and New York) reported by the Banco Central de Chile for the formal exchange market which appears on the Reuters Screen CHILG Page at the Specified Time, if any, on that Rate Calculation Date.
CLP.CHILG-OBSERVADO/CLP07	FpML	The Spot Rate for a Rate Calculation Date will be the Chilean Peso/U.S. Dollar observado rate, expressed as the amount of Chilean Pesos per one U.S. Dollar, for settlement on the same day (or, if such day is not a Business Day in New York, for settlement on the first succeeding day that is a Business Day in both Santiago and New York) reported by the Banco Central de Chile which appears on the Reuters Screen CHILG Page under "OBSERVADO" at the Specified Time, if any, on the first Business Day following that Rate Calculation Date.
CLP.OFFICIAL.RATE/CLP08	FpML	The Spot Rate for a Rate Calculation Date will be the Chilean Peso/U.S. Dollar Specified Rate, expressed as the amount of Chilean Pesos per one U.S. Dollar (or, if such day is not a Business Day in New York, for settlement on the first succeeding day that is a Business Day in both Santiago and New York), calculated in accordance with Title I, Chapter 1 Number 6 of the Compendium of International Exchange Norms of the Banco Central de Chile and published by the Banco Central de Chile at the Specified Time, if any, on the first Business Day following that Rate Calculation Date.
CLP.TELERATE.38942/CLP09	FpML	The Spot Rate for a Rate Calculation Date will be the Chilean Peso/U.S. Dollar observado rate, expressed as the amount of Chilean Pesos per one U.S. Dollar, for settlement on the same day (or, if such day is not a Business Day in New York, for settlement on the first succeeding day that is a Business Day in both Santiago and New York) reported by the Banco Central de Chile which appears on the Telerate Page 38942 opposite the caption "Observado" at the Specified Time, if any, on the first Business Day following the Rate

CNY.SAEC/CNY01	FpML	<p>Calculation Date.</p> <p>The Spot Rate for a Rate Calculation Date will be the Chinese Renminbi/U.S. Dollar official fixing rate, expressed as the amount of Chinese Renminbi per one U.S. Dollar, for settlement in two Business Days reported by The State Administration of Exchange Control of the People's Republic of China, Beijing, which appears on the Reuters Screen SAEC Page opposite the symbol "CYN=" as of 4:00 p.m., Beijing time, on that Rate Calculation Date.</p>
COP.CO/COL03/COP01	FpML	<p>The Spot Rate for a Rate Calculation Date will be the Colombian Peso/U.S. Dollar fixing rate, expressed as the amount of Colombian Pesos per one U.S. Dollar, for settlement on the same day (unless such day is not a Business Day in New York, then for settlement on the first succeeding day that is a Business Day in Bogota and New York) reported by the Colombian Banking Superintendency which appears on the Reuters Screen CO/COL03 Page opposite the caption "TRCM" ("Tasa de Cierre Representativa del Mercado" or closing market price) at 12:00 noon, Bogota time, on the first Business Day following that Rate Calculation Date.</p>
COP.TCRM/COP02	FpML	<p>The Spot Rate for a Rate Calculation Date will be the Colombian Peso/U.S. Dollar fixing rate, expressed as the amount of Colombian Pesos per one U.S. Dollar, for settlement on the same day (unless such day is not a Business Day in New York, then for settlement on the first succeeding day that is a Business Day in Bogota and New York) reported by the Colombian Banking Superintendency as the "TASA Representativa del Mercado" as of 12:00 noon, Bogota time, on the first Business Day following that Rate Calculation Date.</p>
CURRENCY-IMPLIED.RATE.(ADR)/CURA1	FpML	<p>the Spot Rate for a Rate Calculation Date will be the Reference Currency/U.S. Dollar exchange rate, expressed as the amount of Reference Currency per one U.S. Dollar, determined on the basis of quotations provided by Reference Dealers on that Rate Calculation Date of that day's price of a Specified Company's American Depositary Receipt or American Depositary Receipts (the "ADR" or "ADRs", as appropriate) and the price of the local share or shares of such Specified Company of the same type</p>

		<p>and in the same quantity represented by such ADR or ADRs, as the case may be (the "Share" or "Shares", as appropriate). The Calculation Agent will request each of the Reference Dealers to provide a firm quotation of (A) in the case where one ADR represents less than one Share, its bid and offer price (in the Reference Currency) for one Share and its bid and offer price (in U.S. Dollars) for the number of ADRs which represent such Share and (B) in all other cases, its bid and offer price (in the Reference Currency) for the Share or Shares, as the case may be, and its bid and offer price (in U.S. Dollars) for one ADR. If one or more quotations are provided, the rate for a Rate Calculation Date will equal the ratio of (1) the arithmetic mean of the midpoint of the bid and offer prices quoted in the Reference Currency by each Reference Dealer for such Share or Shares, as the case may be, and (2) the arithmetic mean of the midpoint of the bid and offer prices quoted in U.S. Dollars by each Reference Dealer for such ADR or ADRs, as the case may be, subject to an adjustment, if any, by the Calculation Agent to reduce the effect of momentary disparities in the prices of the Share or Shares and the ADR or ADRs, as appropriate. The quotations used to determine the Spot Rate for a Rate Calculation Date will be determined in each case at the Specified Time on the Rate Calculation Date or, if no such time is specified, the time chosen by the Calculation Agent.</p>
<p>CURRENCY-IMPLIED.RATE.(LOCAL.ASSET)/CURA2</p>	<p>FpML</p>	<p>The Spot Rate for a Rate Calculation Date will be the Reference Currency/Settlement Currency exchange rate, expressed as the amount of Reference Currency per one unit of Settlement Currency, determined on the basis of quotations provided by Reference Dealers on that Rate Calculation Date for that day's price of Local Assets. The Calculation Agent will request each of the Reference Dealers to provide a firm quotation of its bid and offer price (in both the Reference Currency and the Settlement Currency) for an amount of Local Assets whose face value equals the Specified Amount. If one or more quotations are provided, the rate for a Rate Calculation Date will equal the ratio of (A) the arithmetic mean of the midpoint of the bid and offer prices quoted in the Reference Currency</p>

		by each Reference Dealer for such Local Assets and (B) the arithmetic mean of the midpoint of the bid and offer prices quoted in the Settlement Currency by each Reference Dealer for such Local Assets. The quotations used to determine the Spot Rate for a Rate Calculation Date will be determined in each case at the Specified Time on the Rate Calculation Date or, if no such time is specified, the time chosen by the Calculation Agent.
CURRENCY-MUTUAL.AGREEMENT/CURA3	FpML	The Spot Rate for a Rate Calculation Date will be the Reference Currency/Settlement Currency Specified Rate, expressed as the amount of the Reference Currency per one unit of Settlement Currency, for settlement on the Settlement Date agreed upon by the parties on or prior to that Rate Calculation Date (or, if different, the day on which rates for that date would, in the ordinary course, be published or announced).
CURRENCY-REFERENCE.DEALERS/CURA4	FpML	The Spot Rate for a Rate Calculation Date will be determined on the basis of quotations provided by Reference Dealers on that Rate Calculation Date of that day's Specified Rate, expressed as the amount of Reference Currency per one unit of Settlement Currency, for settlement on the Settlement Date. The Calculation Agent will request the Specified Office of each of the Reference Dealers to provide a firm quotation of its Specified Rate for a transaction where the amount of Reference Currency equals the Specified Amount. If four quotations are provided, the rate for a Rate Calculation Date will be the arithmetic mean of the Specified Rates, without regard to the Specified Rates having the highest and lowest value. If exactly three quotations are provided, the rate for a Rate Calculation Date will be the Specified Rate provided by the Reference Dealer that remains after disregarding the Specified Rates having the highest and lowest values. For this purpose, if more than one quotation has the same highest value or lowest value, then the Specified Rate of one of such quotations shall be disregarded. If exactly two quotations are provided, the rate for a Rate Calculation Date will be the arithmetic mean of the Specified Rates. If only one quotation is provided, the rate for a Rate Calculation Date will be

		the Specified Rate quoted by that Reference Dealer. The quotations used to determine the Spot Rate for a Rate Calculation Date will be determined in each case at the Specified Time on that Rate Calculation Date or, if no such time is specified, the time chosen by the Calculation Agent.
CURRENCY-WHOLESALE.MARKET/CURA5	FpML	The Spot Rate for a Rate Calculation Date will be determined by the Calculation Agent on the basis of that day's Specified Rate, expressed as the amount of Reference Currency per one unit of Settlement Currency, in a legal and customary wholesale market in which there is no, or minimal, Governmental Authority controls or interference, except as a participant in such market.
ECS.DNRP/ECS01	FpML	The Spot Rate for a Rate Calculation Date will be the Ecuadorian Sucre/U.S. Dollar Specified Rate, expressed as the amount of Ecuadorian Sucres per one U.S. Dollar, for settlement in one Business Day (where such day is a Business Day in Guayaquil and New York) which appears on Reuters Screen DNRP Page at 12:00 noon, Guayaquil time, on that Rate Calculation Date.
IDR.ABS/IDR01	FpML	The Spot Rate for a Rate Calculation Date will be the Indonesian Rupiah/U.S. Dollar spot rate at 11:00 a.m., Singapore time, expressed as the amount of Indonesian Rupiah per one U.S. Dollar, for settlement in two Business Days, reported by the Association of Banks in Singapore which appears on the Telerate Page 50157 to the right of the caption "Spot" under the column "IDR" at approximately 11:30 a.m., Singapore time, on that Rate Calculation Date.
ILS.BOIJ/ILS01	FpML	The Spot Rate for a Rate Calculation Date will be the Israeli Shekel/U.S. Dollar Specified Rate, expressed as the amount of Israeli Shekels per one U.S. Dollar, for settlement in two Business Days which appears on the Reuters Screen BOIJ Page as of 1:00 p.m., Tel Aviv time, on that Rate Calculation Date.
ILS.FXIL/ILS02	FpML	The Spot Rate for a Rate Calculation Date will be the Israeli Shekel/U.S. Dollar Specified Rate, expressed as the amount of Israeli Shekels per one U.S. Dollar, for settlement in two Business Days which appears on the Reuters Screen FXIL Page as of 1:00 p.m., Tel Aviv time, on that Rate Calculation Date.
INR.RBIB/INR01	FpML	The Spot Rate for a Rate Calculation

		Date will be the Indian Rupee/U.S. Dollar reference rate, expressed as the amount of Indian Rupee per one U.S. Dollar, for settlement in two Business Days reported by the Reserve Bank of India which appears on the Reuters Screen RBIB Page at 2:30 p.m., Mumbai time, on that Rate Calculation Date.
KRW.KEBEY/KRW01	FpML	The Spot Rate for a Rate Calculation Date will be the Korean Won/U.S. Dollar Specified Rate, expressed as the amount of Korean Won per one U.S. Dollar, for settlement in two Business Days which appears on the Reuters Screen KEBEY Page at the Specified Time, if any, on that Rate Calculation Date.
KRW.KFTC18/KRW02	FpML	The Spot Rate for a Rate Calculation Date will be the Korean Won/U.S. Dollar market average rate (official fixing), expressed as the amount of Korean Won per one U.S. Dollar, for settlement in two Business Days reported by the Korea Financial Telecommunications and Clearing Corporation which appears on the Reuters Screen KFTC18 Page under the heading "KRW" and in the row "USD" between the hours of 8:00 a.m. and 9:00 a.m., Seoul time, on the first Business Day following that Rate Calculation Date.
KRW.TELERATE.45644/KRW03	FpML	The Spot Rate for a Rate Calculation Date will be the Korean Won/U.S. Dollar market average rate (official fixing), expressed as the amount of Korean Won per one U.S. Dollar, for settlement in two Business Days reported by the Korea Financial Telecommunications and Clearing Corporation which appears on the Telerate Page 45644 between the hours of 8:00 a.m. and 9:00 a.m., Seoul time, on the first Business Day following that Rate Calculation Date.
LBP.BDLX/LBP01	FpML	The Spot Rate for a Rate Calculation Date will be the Lebanese Pound/U.S. Dollar Specified Rate, expressed as the amount of Lebanese Pounds per one U.S. Dollar, for settlement in two Business Days which appears on the Reuters Screen BDLX Page as of 12:00 noon, Beirut time, on that Rate Calculation Date.
MAD.OFFICIAL.RATE/MAD01	FpML	The Spot Rate for a Rate Calculation Date will be the Moroccan Dirham/U.S. Dollar Specified Rate, expressed as the amount of Moroccan Dirham per one U.S. Dollar, for settlement in two Business Days reported by the Central

		Bank of Morocco as of 1:00 p.m., Rabat time, on that Rate Calculation Date.
MXP.BNMX/MXP01	FpML	The Spot Rate for a Rate Calculation Date will be the Mexican Pesos/U.S. Dollar Specified rate, expressed as the amount of Mexican Pesos per one U.S. Dollar, for settlement in two Business Days reported by Banco de Mexico which appears on the Reuters Screen BNMX Page opposite the caption "Fix" at the close of business in Mexico City on that Rate Calculation Date.
MXP.FIXING.RATE/MXP02	FpML	The Spot Rate for a Rate Calculation Date will be the Mexican Peso/U.S. Dollar fixing rate, expressed as the amount of Mexican Pesos per one U.S. Dollar, for settlement in two Business Days which is published by Banco de Mexico in the Official Gazette of the Federation pursuant to the "Disposiciones aplicables a la determinacion del tipo de Câmbio para solventar obligaciones denominadas en moneda extranjera pagaderas en la Republica Mexicana" (Rules applicable to determine the exchange rate to pay obligations denominated in foreign currency payable in Mexico) on the first Business Day following that Rate Calculation Date.
MXP.MEX01/MXP03	FpML	The Spot Rate for a Rate Calculation Date will be the Mexican Peso/U.S. Dollar fixing rate, expressed as the amount of Mexican Pesos per one U.S. Dollar, for settlement in two Business Days reported by Banco de Mexico which appears on Reuters Screen MEX01 Page under the heading "MXNFIX=RR", at the close of business in Mexico City on that Rate Calculation Date.
MXP.PUBLISHED/MXP04	FpML	The Spot Rate for a Rate Calculation Date will be the Mexican Peso/U.S. Dollar fixing rate, expressed as the amount of Mexican Pesos per one U.S. Dollar, for settlement in two Business Days which is published by the Bolsa Mexicana de Valores, S.A. de C.V. (as established in Section 2 of the "Resolution concerning the exchange rate applicable for calculating the Mexican Peso equivalent of principal and interest of Mexican Treasury Notes denominated in foreign currency and payable in Mexican Pesos" published in the Diario Oficial de la Federacion on November 11, 1991) in the Movimiento Diario del Mercado de Valores de la Bolsa Mexicana de Valores, S.A. de

		C.V. under the heading "Movimiento Diario del Mercado de Valores" on that Rate Calculation Date.
MYR.ABS/MYR01	FpML	The Spot Rate for a Rate Calculation Date will be the Malaysian Ringgit/U.S. Dollar spot rate at 11:00 a.m., Singapore time, expressed as the amount of Malaysian Ringgit per one U.S. Dollar, for settlement in two Business Days, reported by the Association of Banks in Singapore, which appears on the Telerate Page 50157 to the right of the caption "Spot" under the column "MYR" at approximately 11:30 a.m., Singapore time, on that Rate Calculation Date.
PEN.PDSB/PEN01	FpML	The Spot Rate for a Rate Calculation Date will be the Peruvian Sol/U.S. Dollar fixing rate (mid market last), expressed as the amount of Peruvian Sols per one U.S. Dollar, for settlement on that same day which appears on the Reuters Screen PDSB Page opposite the caption "PEN=" as of 12:00 noon, Lima time, on that Rate Calculation Date.
PHP.PHPESO/PHP01	FpML	The Spot Rate for a Rate Calculation Date will be the Philippine Peso/U.S. Dollar tom rate (mid market), expressed as the amount of Philippine Pesos per one U.S. Dollar, for settlement in one Business Day which appears on the Reuters Screen PHPESO Page at approximately 11:00 a.m., Manila time, on that Rate Calculation Date.
PHP.TELERATE.15439/PHP03	FpML	The Spot Rate for a Rate Calculation Date will be the Philippine Peso/U.S. Dollar tom rate (mid market), expressed as the amount of Philippine Pesos per one U.S. Dollar, for settlement in one Business Day which appears on the Telerate Page 15439 at approximately 11:00 a.m., Manila time, on that Rate Calculation Date.
PHP.TELERATE.2920/PHP02	FpML	The Spot Rate for a Rate Calculation Date will be the Philippine Peso/U.S. Dollar Specified Rate, expressed as the amount of Philippine Pesos per one U.S. Dollar, for settlement in one Business Day which appears on the Telerate Page 2920 at the Specified Time, if any, on that Rate Calculation Date.
PKR.SBPK/PKR01	FpML	The Spot Rate for a Rate Calculation Date will be the Pakistan Rupee/U.S. Dollar reference rate, expressed as the amount of Pakistan Rupee per one U.S. Dollar, for settlement in two Business Days which appears on Reuters Screen SBPK Page at the Specified Time, if

		any, on that Rate Calculation Date.
PLZ.NBPQ/PLZ01	FpML	The Spot Rate for a Rate Calculation Date will be the Polish Zloty/U.S. Dollar Specified Rate, expressed as the amount of Polish Zloty per one U.S. Dollar, for settlement in two Business Days reported by the National Bank of Poland which appears on the Reuters Screen NBPQ Page at the Specified Time, if any, on that Rate Calculation Date.
PLZ.NBPR/PLZ02	FpML	The Spot Rate for a Rate Calculation Date will be the Polish Zloty/U.S. Dollar fixing rate, expressed as the amount of Polish Zloty per one U.S. Dollar, for settlement in two Business Days reported by the National Bank of Poland which appears on the Reuters Screen NBPR Page at the Specified Time, if any, on that Rate Calculation Date.
RUB.MICEXFRX/RUB01	FpML	The Spot Rate for a Rate Calculation Date will be the Russian Ruble/U.S. Dollar Specified Rate, expressed as the amount of Russian Rubies per one U.S. Dollar, for settlement on the same day reported by the Moscow Interbank Currency Exchange which appears on the Reuters Screen MICEXFRX Page as of 10:30 a.m., Moscow time, on that Rate Calculation Date.
RUB.MMVB/RUB02	FpML	The Spot Rate for a Rate Calculation Date will be the Russian Ruble/U.S. Dollar Specified Rate, expressed as the amount of Russian Rubies per one U.S. Dollar, for settlement on the same day reported by the Moscow Interbank Currency Exchange which appears on the Reuters Screen MMVB Page as of 10:30 a.m., Moscow time, on that Rate Calculation Date.
SKK.NBSB/SKK01	FpML	The Spot Rate for a Rate Calculation Date will be the Slovak Koruna/U.S. Dollar Specified Rate, expressed as the amount of Slovak Koruna per one U.S. Dollar, for settlement in two Business Days reported by the National Bank of Slovakia which appears on the Reuters Screen NBSB Page as of 11:40 a.m., Bratislava time, on that Rate Calculation Date.
THB.ABS/THB01	FpML	The Spot Rate for a Rate Calculation Date will be the Thai Baht/U.S. Dollar spot rate at 11:00 a.m., Singapore time, expressed as the amount of Thai Bhaht per one U.S. Dollar, for settlement in two Business Days, reported by the Association of Banks in Singapore which appears on the Reuters Screen ABSIRFIX01 Page to the right of the

		caption "Spot" under the column "THB" at approximately 11:30 a.m., Singapore time, on that Rate Calculation Date.
TWD.TELERATE.6161/TWD01	FpML	The Spot Rate for a Rate Calculation Date will be the Taiwanese Dollar/U.S. Dollar Specified Rate, expressed as the amount of Taiwanese Dollars per one U.S. Dollar, for settlement in two Business Days reported by the Taipei Forex Inc. which appears on the Telerate Page 6161 under the heading "Spot" as of 11:00 a.m., Taipei time, on that Rate Calculation Date.
TWD.TFEMA/TWD02	FpML	The Spot Rate for a Rate Calculation Date will be the Taiwanese Dollar/U.S. Dollar Specified Rate, expressed as the amount of Taiwanese Dollars per one U.S. Dollar, for settlement in two Business Days which appears on the Reuters Screen TFEMA Page as of 11:00 a.m., Taipei time, on that Rate Calculation Date.
TWD.TPFL/TWD03	FpML	The Spot Rate for a Rate Calculation Date will be the Taiwanese Dollar/U.S. Dollar Specified Rate, expressed as the amount of Taiwanese Dollars per one U.S. Dollar, for settlement in two Business Days which appears on the Reuters Screen TPFL Page as of 11:00 a.m., Taipei time, on that Rate Calculation Date.
UAH.UICE1/UAH01	FpML	The Spot Rate for a Rate Calculation Date will be the Ukrainian Hryvnia/U.S. Dollar interbank rate, expressed as the amount of Ukrainian Hryvnia per one U.S. Dollar, for settlement on the same day reported by the Ukraine Interbank Currency Exchange which appears on the Reuters Screen UICE1 Page at the Specified Time, if any, on that Rate Calculation Date.
VER.VBCV/VEB01	FpML	The Spot Rate for a Rate Calculation Date will be the Venezuelan Bolivar/U.S. Dollar tipo de câmbio referencial rate, expressed as the amount of Venezuelan Bolivar per one U.S. Dollar, for settlement in two Business Days (where such days are Business Days in both Caracas and New York) reported by the Banco Central de Venezuela which appears on the Reuters Screen VBCV Page at approximately 5:00 p.m., Caracas time, on that Rate Calculation Date.

## 4.55 *spreadScheduleTypeScheme*

### Definition:

Defines the type of each spread schedule type.

### URI:

<http://www.fpml.org/coding-scheme/spread-schedule-type-1-0>

### Coding Scheme

CODE	SOURCE	DESCRIPTION
Long	FpML	Represents a Long Spread Schedule. Spread schedules defined as "Long" will be applied to Long Positions.
Short	FpML	Represents a Short Spread Schedule. Spread schedules defined as "Short" will be applied to Short Positions.

## 4.56 tradeCashflowsStatusScheme

### Definition:

Status of the set of payments once the matching process is performed.

### URI:

<http://www.fpml.org/coding-scheme/trade-cashflows-status-1-0>

### Coding Scheme

CODE	SOURCE	DESCRIPTION
Alleged	FpML	No corresponding payment (or set of payments) was found in "your" submitted sets.
Matched	FpML	Both sides have the same payment (or set of payments) information within matching policies.
Mismatched	FpML	Both sides have the same payment (or set of payments), but there are differences greater than the acceptable tolerance in the matching policies.
Unmatched	FpML	No corresponding payment (or set of payments) was found in the "other party's" submitted sets.

# ***1 Global Complex Types***

## 1.1 ActualPrice

### 1.1.1 Description:

### 1.1.2 Contents:

**currency** (zero or one occurrence; of the type Currency) Specifies the currency associated with the net price. This element is not present if the price is expressed in percentage terms (as specified through the priceExpression element).

**amount** (exactly one occurrence; of the type xsd:decimal) Specifies the net price amount. In the case of a fixed income security or a convertible bond, this price includes the accrued interests.

**priceExpression** (exactly one occurrence; of the type PriceExpressionEnum) Specifies whether the price is expressed in absolute or relative terms.

### 1.1.3 Used by:

- Complex type: Price

### 1.1.4 Derived Types:

### 1.1.5 Figure:

### 1.1.6 Schema Fragment:

```
<xsd:complexType name="ActualPrice">
  <xsd:sequence>
    <xsd:element name="currency" type="Currency" minOccurs="0">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          Specifies the currency associated with the net price. This
          element is not present if the price is expressed in
          percentage terms (as specified through the priceExpression
          element).
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
    <xsd:element name="amount" type="xsd:decimal">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          Specifies the net price amount. In the case of a fixed income
          security or a convertible bond, this price includes the
          accrued interests.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
    <xsd:element name="priceExpression" type="PriceExpressionEnum">

          relative terms.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
  </xsd:sequence>
</xsd:complexType>
```

## 1.2 AnyAssetReference

### 1.2.1 Description:

A reference to an asset, e.g. a portfolio, trade, or reference instrument..

### 1.2.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type Reference)

- The abstract base class for all types which define intra-document pointers.

### 1.2.3 Used by:

- Complex type: PricingMethod
- Complex type: ScheduledDate
- Complex type: Valuation
- Complex type: VolatilityRepresentation

### 1.2.4 Derived Types:

### 1.2.5 Figure:

### 1.2.6 Schema Fragment:

```
<xsd:complexType name="AnyAssetReference">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A reference to an asset, e.g. a portfolio, trade, or reference
      instrument..
    </xsd:documentation>
  </xsd:annotation>
  <xsd:complexContent>
    <xsd:extension base="Reference">
      <xsd:attribute name="href" type="xsd:IDREF" use="required"/>
    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

## 1.3 Asset

### 1.3.1 Description:

A generic type describing the basic components of an asset.

### 1.3.2 Contents:

**instrumentId** (one or more occurrences; of the type InstrumentId)

**description** (zero or one occurrence; of the type xsd:string) The long name of a security.

### 1.3.3 Used by:

- Element: underlyingAsset
- Complex type: Cash
- Complex type: UnderlyingAsset

### 1.3.4 Derived Types:

- Complex type: Cash
- Complex type: UnderlyingAsset

### 1.3.5 Figure:

### 1.3.6 Schema Fragment:

```
<xsd:complexType name="Asset" abstract="true">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A generic type describing the basic components of an asset.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:sequence>
    <xsd:element name="instrumentId" type="InstrumentId" maxOccurs="unbounded"/>
    <xsd:element name="description" type="xsd:string" minOccurs="0">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          The long name of a security.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
  </xsd:sequence>
  <xsd:attribute name="id" type="xsd:ID"/>
</xsd:complexType>
```

## 1.4 AssetMeasureType

### 1.4.1 Description:

A scheme identifying the types of measures that can be used to describe an asset.

### 1.4.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type xsd:normalizedString)

### 1.4.3 Used by:

### 1.4.4 Derived Types:

### 1.4.5 Figure:

### 1.4.6 Schema Fragment:

```
<xsd:complexType name="AssetMeasureType">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A scheme identifying the types of measures that can be used to
      describe an asset.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:simpleContent>
    <xsd:extension base="xsd:normalizedString">
      <xsd:attribute name="assetMeasureScheme" default="http://www.fpml.org/coding-scheme/asset" />
    </xsd:extension>
  </xsd:simpleContent>
</xsd:complexType>
```

## 1.5 AssetPool

### 1.5.1 Description:

Characterise the asset pool behind an asset backed bond.

### 1.5.2 Contents:

**version** (exactly one occurrence; of the type xsd:nonNegativeInteger) The version number

**effectiveDate** (zero or one occurrence; of the type IdentifiedDate) Optionally it is possible to specify a version effective date when a versionId is supplied.

**initialFactor** (exactly one occurrence; of the type xsd:decimal) The part of the mortgage that is outstanding on trade inception, i.e. has not been repaid yet as principal. It is expressed as a multiplier factor to the mortgage: 1 means that the whole mortgage amount is outstanding, 0.8 means that 20% has been repaid.

**currentFactor** (zero or one occurrence; of the type xsd:decimal) The part of the mortgage that is currently outstanding. It is expressed similarly to the initial factor, as factor multiplier to the mortgage. This term is formally defined as part of the "ISDA Standard Terms Supplement for use with credit derivatives transactions on mortgage-backed security with pas-as-you-go or physical settlement".

### 1.5.3 Used by:

- Complex type: Mortgage

### 1.5.4 Derived Types:

### 1.5.5 Figure:

### 1.5.6 Schema Fragment:

```
<xsd:complexType name="AssetPool">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      Characterise the asset pool behind an asset backed bond.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:sequence>
    <xsd:group ref="VersionHistory.model" minOccurs="0"/>
    <xsd:element name="initialFactor" type="xsd:decimal">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          The part of the mortgage that is outstanding on trade
          inception, i.e. has not been repaid yet as principal. It is
          expressed as a multiplier factor to the mortgage: 1 means that
          the whole mortgage amount is outstanding, 0.8 means that 20%
          has been repaid.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
    <xsd:element name="currentFactor" type="xsd:decimal" minOccurs="0">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          The part of the mortgage that is currently outstanding. It is
          expressed similarly to the initial factor, as factor
          multiplier to the mortgage. This term is formally defined as
          part of the "ISDA Standard Terms Supplement for use with
          credit derivatives transactions on mortgage-backed security
          with pas-as-you-go or physical settlement".
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
  </xsd:sequence>
</xsd:complexType>
```

## 1.6 AssetReference

### 1.6.1 Description:

Reference to an underlying asset.

### 1.6.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type Reference)

- The abstract base class for all types which define intra-document pointers.

### 1.6.3 Used by:

- Complex type: DividendPeriod
- Complex type: ForwardRateCurve
- Complex type: PassThroughItem
- Complex type: TermPoint

### 1.6.4 Derived Types:

### 1.6.5 Figure:

### 1.6.6 Schema Fragment:

```
<xsd:complexType name="AssetReference">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      Reference to an underlying asset.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:complexContent>
    <xsd:extension base="Reference">
      <xsd:attribute name="href" type="xsd:IDREF" use="required" ecore:reference="Asset"/>
    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

## 1.7 BasicQuotation

### 1.7.1 Description:

Some kind of numerical measure about an asset, eg. its NPV, together with characteristics of that measure.

### 1.7.2 Contents:

**value** (zero or one occurrence; of the type xsd:decimal) The value of the the quotation.

### 1.7.3 Used by:

- Complex type: BasicAssetValuation
- Complex type: CashflowObservation

### 1.7.4 Derived Types:

### 1.7.5 Figure:

### 1.7.6 Schema Fragment:

```
<xsd:complexType name="BasicQuotation">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      Some kind of numerical measure about an asset, eg. its NPV,
      together with characteristics of that measure.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:sequence>
    <xsd:group ref="Quotation.model"/>
  </xsd:sequence>
</xsd:complexType>
```

## 1.8 Basket

### 1.8.1 Description:

A type describing the underlying features of a basket swap. Each of the basket constituents are described through an embedded component, the basketConstituentsType.

### 1.8.2 Contents:

**openUnits** (zero or one occurrence; of the type xsd:decimal) The number of units (index or securities) that constitute the underlying of the swap. In the case of a basket swap, this element is used to reference both the number of basket units, and the number of each asset components of the basket when these are expressed in absolute terms.

**basketConstituent** (one or more occurrences; of the type BasketConstituent) Describes each of the components of the basket.

**basketDivisor** (zero or one occurrence; of the type xsd:decimal) Specifies the basket divisor amount. This value is normally used to adjust the constituent weight for pricing or to adjust for dividends, or other corporate actions.

**basketCurrency** (zero or one occurrence; of the type Currency) Specifies the currency for this basket.

### 1.8.3 Used by:

- Complex type: Underlyer

### 1.8.4 Derived Types:

### 1.8.5 Figure:

### 1.8.6 Schema Fragment:

```
<xsd:complexType name="Basket">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A type describing the underlying features of a basket swap. Each
      of the basket constituents are described through an embedded
      component, the basketConstituentsType.
    </xsd:documentation>

      Specifies the currency for this basket.
    </xsd:documentation>
  </xsd:annotation>
</xsd:element>
</xsd:sequence>
<xsd:attribute name="id" type="xsd:ID" use="optional"/>
</xsd:complexType>
```

## 1.9 BasketConstituent

### 1.9.1 Description:

A type describing each of the constituents of a basket.

### 1.9.2 Contents:

**underlyingAsset** (exactly one occurrence; of the type Asset) Define the underlying asset when it is a listed security.

**constituentWeight** (zero or one occurrence; of the type ConstituentWeight) Specifies the weight of each of the underlyer constituent within the basket, either in absolute or relative terms. This is an optional component, as certain swaps do not specify a specific weight for each of their basket constituents.

**dividendPayout** (zero or one occurrence; of the type DividendPayout) Specifies the dividend payout ratio associated with an equity underlyer. A basket swap can have different payout ratios across the various underlying constituents. In certain cases the actual ratio is not known on trade inception, and only general conditions are then specified. Users should note that FpML makes a distinction between the derivative contract and the underlyer of the contract. It would be better if the agreed dividend payout on a derivative contract was modelled at the level of the derivative contract, an approach which may be adopted in the next major version of FpML.

**underlyerPrice** (zero or one occurrence; of the type Price) Specifies the price that is associated with each of the basket constituents. This component is optional, as it is not absolutely required to accurately describe the economics of the trade, considering the price that characterizes the equity swap is associated to the leg of the trade.

**underlyerNotional** (zero or one occurrence; of the type Money) Specifies the notional (i.e. price \* quantity) that is associated with each of the basket constituents. This component is optional, as it is not absolutely required to accurately describe the economics of the trade, considering the notional that characterizes the equity swap is associated to the leg of the trade.

**underlyerSpread** (zero or one occurrence; of the type SpreadScheduleReference) Provides a link to the spread schedule used for this underlyer.

**couponPayment** (zero or one occurrence; of the type PendingPayment) The next upcoming coupon payment.

### 1.9.3 Used by:

- Complex type: Basket

### 1.9.4 Derived Types:

### 1.9.5 Figure:

### 1.9.6 Schema Fragment:

```
<xsd:complexType name="BasketConstituent">
  <xsd:annotation>

</xsd:complexType>
```

## 1.12 Bond

### 1.12.1 Description:

### 1.12.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type ExchangeTraded)

•  
Either

**issuerName** (exactly one occurrence; of the type xsd:string)

Or

**issuerPartyReference** (exactly one occurrence; of the type PartyReference)

**seniority** (zero or one occurrence; of the type CreditSeniority) The repayment precedence of a debt instrument.

**couponType** (zero or one occurrence; of the type CouponType) Specifies if the bond has a variable coupon, step-up/down coupon or a zero-coupon.

**couponRate** (zero or one occurrence; of the type xsd:decimal) Specifies the coupon rate (expressed in percentage) of a fixed income security or convertible bond.

**maturity** (zero or one occurrence; of the type xsd:date) The date when the principal amount of a security becomes due and payable.

**parValue** (zero or one occurrence; of the type xsd:decimal) Specifies the nominal amount of a fixed income security or convertible bond.

**faceAmount** (zero or one occurrence; of the type xsd:decimal) Specifies the total amount of the issue. Corresponds to the par value multiplied by the number of issued security.

**paymentFrequency** (zero or one occurrence; of the type Interval) Specifies the frequency at which the bond pays, e.g. 6M.

**dayCountFraction** (zero or one occurrence; of the type DayCountFraction) The day count basis for the bond.

### 1.12.3 Used by:

- Element: bond
- Complex type: ConvertibleBond

### 1.12.4 Derived Types:

- Complex type: ConvertibleBond

### 1.12.5 Figure:

### 1.12.6 Schema Fragment:

## 1.13 Cash

### 1.13.1 Description:

### 1.13.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type Asset)

- A generic type describing the basic components of an asset.

**currency** (exactly one occurrence; of the type Currency) The currency in which an amount is denominated.

### 1.13.3 Used by:

- Element: cash

### 1.13.4 Derived Types:

### 1.13.5 Figure:

### 1.13.6 Schema Fragment:

```
<xsd:complexType name="Cash">
  <xsd:complexContent>
    <xsd:extension base="Asset">
      <xsd:sequence>
        <xsd:element name="currency" type="Currency">
          <xsd:annotation>
            <xsd:documentation xml:lang="en">
              The currency in which an amount is denominated.
            </xsd:documentation>
          </xsd:annotation>
        </xsd:element>
      </xsd:sequence>
    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

## 1.14 Commission

### 1.14.1 Description:

A type describing the commission that will be charged for each of the hedge transactions.

### 1.14.2 Contents:

**commissionDenomination** (exactly one occurrence; of the type CommissionDenominationEnum) The type of units used to express a commission.

**commissionAmount** (exactly one occurrence; of the type xsd:decimal) The commission amount, expressed in the way indicated by the commissionType element.

**currency** (zero or one occurrence; of the type Currency) The currency in which an amount is denominated.

**commissionPerTrade** (zero or one occurrence; of the type xsd:decimal) The total commission per trade.

**fxRate** (zero or more occurrences; of the type FxRate) FX Rates that have been used to convert commissions to a single currency.

### 1.14.3 Used by:

- Complex type: Price

### 1.14.4 Derived Types:

### 1.14.5 Figure:

### 1.14.6 Schema Fragment:

```
<xsd:complexType name="Commission">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">

</xsd:complexType>
```

## 1.15 ConstituentWeight

### 1.15.1 Description:

A type describing the weight of each of the underlying constituent within the basket, either in absolute or relative terms.

### 1.15.2 Contents:

Either

**openUnits** (exactly one occurrence; of the type `xsd:decimal`) The number of units (index or securities) that constitute the underlying of the swap. In the case of a basket swap, this element is used to reference both the number of basket units, and the number of each asset components of the basket when these are expressed in absolute terms.

Or

**basketPercentage** (exactly one occurrence; of the type `RestrictedPercentage`) The relative weight of each respective basket constituent, expressed in percentage. A basket percentage of 5% would be represented as 0.05.

Or

**basketAmount** (exactly one occurrence; of the type `Money`) The relative weight of each respective basket constituent, expressed as a monetary amount.

### 1.15.3 Used by:

- Complex type: `BasketConstituent`
- Complex type: `ReferencePoolItem`

### 1.15.4 Derived Types:

### 1.15.5 Figure:

### 1.15.6 Schema Fragment:

```

```
</xsd:choice>  
</xsd:complexType>
```

## 1.16 ConvertibleBond

### 1.16.1 Description:

### 1.16.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type Bond)

• **underlyingEquity** (zero or one occurrence; of the type EquityAsset) Specifies the equity in which the convertible bond can be converted.

**redemptionDate** (zero or one occurrence; of the type xsd:date) Earlier date between the convertible bond put dates and its maturity date.

### 1.16.3 Used by:

- Element: convertibleBond

### 1.16.4 Derived Types:

### 1.16.5 Figure:

### 1.16.6 Schema Fragment:

```
<xsd:complexType name="ConvertibleBond">

              Specifies the equity in which the convertible bond can be
              converted.
            </xsd:documentation>
          </xsd:annotation>
        </xsd:element>
        <xsd:element name="redemptionDate" type="xsd:date" minOccurs="0">
          <xsd:annotation>
            <xsd:documentation xml:lang="en">
              Earlier date between the convertible bond put dates and
              its maturity date.
            </xsd:documentation>
          </xsd:annotation>
        </xsd:element>
      </xsd:sequence>
    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

## 1.17 CouponType

### 1.17.1 Description:

Defines a scheme of values for specifying if the bond has a variable coupon, step-up/down coupon or a zero-coupon.

### 1.17.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type `xsd:normalizedString`)

### • 1.17.3 Used by:

### 1.17.4 Derived Types:

### 1.17.5 Figure:

### 1.17.6 Schema Fragment:

```

    </xsd:extension>
  </xsd:simpleContent>
</xsd:complexType>
```

## 1.18 Deposit

### 1.18.1 Description:

### 1.18.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type UnderlyingAsset)

- A type describing the basic components of a security of index underlyer.

**term** (exactly one occurrence; of the type Interval) Specifies the term of the deposit, e.g. 5Y.

**paymentFrequency** (zero or one occurrence; of the type Interval) Specifies the frequency at which the deposit pays, e.g. 6M.

**dayCountFraction** (zero or one occurrence; of the type DayCountFraction) The day count basis for the deposit.

### 1.18.3 Used by:

- Element: deposit

### 1.18.4 Derived Types:

### 1.18.5 Figure:

### 1.18.6 Schema Fragment:

```
<xsd:complexType name="Deposit">

              The day count basis for the deposit.
            </xsd:documentation>
          </xsd:annotation>
        </xsd:element>
      </xsd:sequence>
    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

## 1.19 DividendPayout

### 1.19.1 Description:

A type describing the dividend payout ratio associated with an equity underlyer. In certain cases the actual ratio is not known on trade inception, and only general conditions are then specified.

### 1.19.2 Contents:

Either

**dividendPayoutRatio** (exactly one occurrence; of the type xsd:decimal) Specifies the actual dividend payout ratio associated with the equity underlyer.

Or

**dividendPayoutConditions** (exactly one occurrence; of the type xsd:string) Specifies the dividend payout conditions that will be applied in the case where the actual ratio is not known, typically because of regulatory or legal uncertainties.

**dividendPayment** (zero or more occurrences; of the type PendingPayment) The next upcoming dividend payment or payments.

### 1.19.3 Used by:

- Complex type: BasketConstituent
- Complex type: SingleUnderlyer

### 1.19.4 Derived Types:

### 1.19.5 Figure:

### 1.19.6 Schema Fragment:

```
<xsd:complexType name="DividendPayout">

  </xsd:complexContent>  
</xsd:complexType>
```

## 1.21 ExchangeTraded

### 1.21.1 Description:

### 1.21.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type UnderlyingAsset)

- A type describing the basic components of a security of index underlyer.

**relatedExchangeld** (zero or more occurrences; of the type Exchangeld) A short form unique identifier for a related exchange. If the element is not present then the exchange shall be the primary exchange on which listed futures and options on the underlying are listed. The term "Exchange" is assumed to have the meaning as defined in the ISDA 2002 Equity Derivatives Definitions.

**optionsExchangeld** (zero or more occurrences; of the type Exchangeld) A short form unique identifier for an exchange on which the reference option contract is listed. This is to address the case where the reference exchange for the future is different than the one for the option. The options Exchange is referenced on share options when Merger Elections are selected as Options Exchange Adjustment.

### 1.21.3 Used by:

- Complex type: Bond
- Complex type: EquityAsset
- Complex type: ExchangeTradedContract
- Complex type: ExchangeTradedFund
- Complex type: Future
- Complex type: Index

### 1.21.4 Derived Types:

- Complex type: Bond
- Complex type: EquityAsset
- Complex type: ExchangeTradedContract
- Complex type: ExchangeTradedFund
- Complex type: Future
- Complex type: Index

### 1.21.5 Figure:

### 1.21.6 Schema Fragment:

      </xsd:sequence>
    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

## 1.22 ExchangeTradedContract

### 1.22.1 Description:

A type an Exchange Traded Contract

### 1.22.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type ExchangeTraded)

- **multiplier** (zero or one occurrence; of the type xsd:positiveInteger) Specifies the contract multiplier that can be associated with the number of units.

**contractReference** (zero or one occurrence; of the type xsd:string) Specifies the contract that can be referenced, besides the undelyer type.

**expirationDate** (zero or one occurrence; of the type AdjustableOrRelativeDate) The date when the contract expires.

### 1.22.3 Used by:

- Complex type: DeprecatedVariance
- Complex type: ReturnLegValuation
- Complex type: Variance

### 1.22.4 Derived Types:

### 1.22.5 Figure:

### 1.22.6 Schema Fragment:

```
<xsd:complexType name="ExchangeTradedContract">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">

      <xsd:attribute name="facilityTypeScheme" type="xsd:anyURI" default="http://www.fpml.org/" />
    </xsd:extension>
  </xsd:simpleContent>
</xsd:complexType>
```

## 1.25 Future

### 1.25.1 Description:

### 1.25.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type ExchangeTraded)

• **multiplier** (zero or one occurrence; of the type xsd:positiveInteger) Specifies the contract multiplier that can be associated with the number of units.

**futureContractReference** (zero or one occurrence; of the type xsd:string) Specifies the future contract that can be referenced, besides the equity or index reference defined as part of the UnderlyerAsset type.

**maturity** (zero or one occurrence; of the type xsd:date) The date when the future contract expires.

### 1.25.3 Used by:

- Element: future

### 1.25.4 Derived Types:

### 1.25.5 Figure:

### 1.25.6 Schema Fragment:

```
<xsd:complexType name="Future">
  <xsd:complexContent>
    <xsd:extension base="ExchangeTraded">

## 1.28 FxRateAsset

### 1.28.1 Description:

### 1.28.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type UnderlyingAsset)

- A type describing the basic components of a security of index underlyer.

**quotedCurrencyPair** (exactly one occurrence; of the type QuotedCurrencyPair) Defines the two currencies for an FX trade and the quotation relationship between the two currencies.

**rateSource** (zero or one occurrence; of the type FxSpotRateSource) Defines the source of the FX rate.

### 1.28.3 Used by:

- Element: fxRate

### 1.28.4 Derived Types:

### 1.28.5 Figure:

### 1.28.6 Schema Fragment:

```
<xsd:complexType name="FxRateAsset">
  <xsd:complexContent>
    <xsd:extension base="UnderlyingAsset">
      <xsd:sequence>
        <xsd:element name="quotedCurrencyPair" type="QuotedCurrencyPair">

## 1.31 Loan

### 1.31.1 Description:

A type describing a loan underlying asset.

### 1.31.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type UnderlyingAsset)

- A type describing the basic components of a security of index underlyer.

Either

**borrower** (exactly one occurrence; of the type LegalEntity)

Or

**borrowerReference** (exactly one occurrence; of the type LegalEntityReference)

**lien** (zero or one occurrence; of the type Lien) Specifies the seniority level of the lien.

**facilityType** (zero or one occurrence; of the type FacilityType) The type of loan facility (letter of credit, revolving, ...).

**maturity** (zero or one occurrence; of the type xsd:date) The date when the principal amount of the loan becomes due and payable.

**creditAgreementDate** (zero or one occurrence; of the type xsd:date) The credit agreement date is the closing date (the date where the agreement has been signed) for the loans in the credit agreement. Funding of the facilities occurs on (or sometimes a little after) the Credit Agreement date. This underlyer attribute is used to help identify which of the company's outstanding loans are being referenced by knowing to which credit agreement it belongs. ISDA Standards Terms Supplement term: Date of Original Credit Agreement.

**tranche** (zero or one occurrence; of the type UnderlyingAssetTranche) The loan tranche that is subject to the derivative transaction. It will typically be referenced as the Bloomberg tranche number. ISDA Standards Terms Supplement term: Bloomberg Tranche Number.

### 1.31.3 Used by:

- Element: loan

## 1.32 Mortgage

### 1.32.1 Description:

A type describing a mortgage asset.

### 1.32.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type UnderlyingAsset)

- A type describing the basic components of a security of index underlyer.

Either

**insurer** (exactly one occurrence; of the type LegalEntity)

Or

**insurerReference** (exactly one occurrence; of the type LegalEntityReference)

Either

**issuerName** (exactly one occurrence; of the type xsd:string)

Or

**issuerPartyReference** (exactly one occurrence; of the type PartyReference)

**seniority** (zero or one occurrence; of the type CreditSeniority) The repayment precedence of a debt instrument.

**couponType** (zero or one occurrence; of the type CouponType) Specifies if the bond has a variable coupon, step-up/down coupon or a zero-coupon.

**couponRate** (zero or one occurrence; of the type xsd:decimal) Specifies the coupon rate (expressed in percentage) of a fixed income security or convertible bond.

**maturity** (zero or one occurrence; of the type xsd:date) The date when the principal amount of a security becomes due and payable.

**paymentFrequency** (zero or one occurrence; of the type Interval) Specifies the frequency at which the bond pays, e.g. 6M.

**dayCountFraction** (zero or one occurrence; of the type DayCountFraction) The day count basis for the bond.

**originalPrincipalAmount** (zero or one occurrence; of the type xsd:decimal) The initial issued amount of the mortgage obligation.

**pool** (zero or one occurrence; of the type AssetPool) The mortgage pool that is underneath the mortgage obligation.

**sector** (zero or one occurrence; of the type MortgageSector) The sector classification of the mortgage obligation.

**tranche** (zero or one occurrence; of the type xsd:token) The mortgage obligation tranche that is subject to the derivative transaction.

## 1.35 PendingPayment

### 1.35.1 Description:

### 1.35.2 Contents:

**paymentDate** (exactly one occurrence; of the type xsd:date) The date that the dividend or coupon is due.

**amount** (exactly one occurrence; of the type Money) The amount of the dividend or coupon payment. Value of dividends or coupon between ex and pay date. Stock: if we are between ex-date and pay-date and the dividend is payable under the swap, then this should be the ex-div amount \* # of securities. Bond: regardless of where we are vis-a-vis resets: (coupon % \* face of bonds on swap \* (bond day count fraction using days last coupon pay date of the bond through today).

**accruedInterest** (zero or one occurrence; of the type Money) Accrued interest on the dividend or coupon payment. When the TRS is structured to pay a dividend or coupon on reset after payable date, you may earn interest on these amounts. This field indicates the interest accrued on dividend/coupon from pay date to statement date. This will only apply to a handful of agreements where dividendss are held to the next reset AND you receive/pay interest on unpaid amounts.

### 1.35.3 Used by:

- Complex type: BasketConstituent
- Complex type: DividendPayout
- Complex type: SingleUnderlyer

### 1.35.4 Derived Types:

## 1.36 Price

### 1.36.1 Description:

A type describing the strike price.

### 1.36.2 Contents:

**commission** (zero or one occurrence; of the type Commission) This optional component specifies the commission to be charged for executing the hedge transactions.

Either

**determinationMethod** (exactly one occurrence; of the type DeterminationMethod) Specifies the method according to which an amount or a date is determined.

Or

**amountRelativeTo** (exactly one occurrence; of the type AmountReference) The href attribute value will be a pointer style reference to the element or component elsewhere in the document where the anchor amount is defined.

**cleanNetPrice** (zero or one occurrence; of the type xsd:decimal) The net price excluding accrued interest. The "Dirty Price" for bonds is put in the "netPrice" element, which includes accrued interest. Thus netPrice - cleanNetPrice = accruedInterest. The currency and price expression for this field are the same as those for the (dirty) netPrice.

**quotationCharacteristics** (zero or one occurrence; of the type QuotationCharacteristics)

### 1.36.3 Used by:

- Complex type: DeprecatedEquityLegValuationPrice
- Complex type: ReturnLegValuationPrice
- Complex type: BasketConstituent

## 1.37 PriceQuoteUnits

### 1.37.1 Description:

The units in which a price is quoted.

### 1.37.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type xsd:normalizedString)

•

### 1.37.3 Used by:

- Complex type: ParametricAdjustment
- Complex type: PricingParameterShift

### 1.37.4 Derived Types:

### 1.37.5 Figure:

### 1.37.6 Schema Fragment:

```
<xsd:complexType name="PriceQuoteUnits">
  <xsd:annotation>
    <xsd:documentation source="http://www.FpML.org" xml:lang="en">
      The units in which a price is quoted.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:simpleContent>
    <xsd:extension base="xsd:normalizedString">
      <xsd:attribute name="priceQuoteUnitsScheme" type="xsd:anyURI" default="http://www.fpml.org" />
    </xsd:extension>
  </xsd:simpleContent>
</xsd:complexType>
```

## 1.38 QuotationCharacteristics

### 1.38.1 Description:

A type representing a set of characteristics that describe a quotation.

### 1.38.2 Contents:

**measureType** (zero or one occurrence; of the type AssetMeasureType) The type of the value that is measured. This could be an NPV, a cash flow, a clean price, etc.

**quoteUnits** (zero or one occurrence; of the type PriceQuoteUnits) The optional units that the measure is expressed in. If not supplied, this is assumed to be a price/value in currency units.

**side** (zero or one occurrence; of the type QuotationSideEnum) The side (bid/mid/ask) of the measure.

**currency** (zero or one occurrence; of the type Currency) The optional currency that the measure is expressed in. If not supplied, this is defaulted from the reportingCurrency in the valuationScenarioDefinition.

**timing** (zero or one occurrence; of the type QuoteTiming) When during a day the quote is for. Typically, if this element is supplied, the QuoteLocation needs also to be supplied.

**informationSource** (zero or more occurrences; of the type InformationSource) The information source where a published or displayed market rate will be obtained, e.g. Telerate Page 3750.

**time** (zero or one occurrence; of the type xsd:dateTime) When the quote was observed or derived.

**valuationDate** (zero or one occurrence; of the type xsd:date) When the quote was computed.

**expiryTime** (zero or one occurrence; of the type xsd:dateTime) When does the quote cease to be valid.

**cashFlowType** (zero or one occurrence; of the type CashflowType) For cash flows, the type of the cash flows. Examples include: Coupon payment, Premium Fee, Settlement Fee, Brokerage Fee, etc.

### 1.38.3 Used by:

- Complex type: PositionReport
- Complex type: Price
- Complex type: SensitivitySetDefinition
- Complex type: ValuationSet

### 1.38.4 Derived Types:

### 1.38.5 Figure:

### 1.38.6 Schema Fragment:

```
<xsd:complexType name="QuotationCharacteristics">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A type representing a set of characteristics that describe a
      quotation.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:sequence>
    <xsd:group ref="QuotationCharacteristics.model"/>
  </xsd:sequence>
</xsd:complexType>
```

## 1.39 QuoteTiming

### 1.39.1 Description:

The type of the time of the quote.

### 1.39.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type xsd:normalizedString)

### 1.39.3 Used by:

### 1.39.4 Derived Types:

### 1.39.5 Figure:

### 1.39.6 Schema Fragment:

```
<xsd:complexType name="QuoteTiming">
  <xsd:annotation>
    <xsd:documentation source="http://www.FpML.org" xml:lang="en">

    </xsd:extension>
  </xsd:simpleContent>
</xsd:complexType>
```

## 1.40 RateIndex

### 1.40.1 Description:

### 1.40.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type UnderlyingAsset)

- A type describing the basic components of a security of index underlyer.

**floatingRateIndex** (exactly one occurrence; of the type FloatingRateIndex)

**term** (exactly one occurrence; of the type Interval) Specifies the term of the simple swap, e.g. 5Y.

**paymentFrequency** (zero or one occurrence; of the type Interval) Specifies the frequency at which the index pays, e.g. 6M.

**dayCountFraction** (zero or one occurrence; of the type DayCountFraction) The day count basis for the index.

### 1.40.3 Used by:

- Element: rateIndex

### 1.40.4 Derived Types:

### 1.40.5 Figure:

### 1.40.6 Schema Fragment:

    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

## 1.41 SimpleCreditDefaultSwap

### 1.41.1 Description:

### 1.41.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type UnderlyingAsset)

- A type describing the basic components of a security of index underlyer.

Either

**referenceEntity** (exactly one occurrence; of the type LegalEntity) The entity for which this is defined.

Or

**creditEntityReference** (exactly one occurrence; of the type LegalEntityReference) An XML reference a credit entity defined elsewhere in the document.

**term** (exactly one occurrence; of the type Interval) Specifies the term of the simple CD swap, e.g. 5Y.

**paymentFrequency** (zero or one occurrence; of the type Interval) Specifies the frequency at which the swap pays, e.g. 6M.

### 1.41.3 Used by:

- Element: simpleCreditDefaultSwap

### 1.41.4 Derived Types:

### 1.41.5 Figure:

### 1.41.6 Schema Fragment:

        </xsd:element>
      </xsd:sequence>
    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

## 1.42 SimpleFra

### 1.42.1 Description:

### 1.42.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type UnderlyingAsset)

- A type describing the basic components of a security of index underlyer.

**startTerm** (exactly one occurrence; of the type Interval) Specifies the start term of the simple fra, e.g. 3M.

**endTerm** (exactly one occurrence; of the type Interval) Specifies the end term of the simple fra, e.g. 9M.

**dayCountFraction** (zero or one occurrence; of the type DayCountFraction) The day count basis for the FRA.

### 1.42.3 Used by:

- Element: simpleFra

### 1.42.4 Derived Types:

### 1.42.5 Figure:

### 1.42.6 Schema Fragment:

  </xsd:complexContent>
</xsd:complexType>
```

## 1.43 SimpleIRSwap

### 1.43.1 Description:

### 1.43.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type UnderlyingAsset)

- A type describing the basic components of a security of index underlyer.

**term** (exactly one occurrence; of the type Interval) Specifies the term of the simple swap, e.g. 5Y.

**paymentFrequency** (zero or one occurrence; of the type Interval) Specifies the frequency at which the swap pays, e.g. 6M.

**dayCountFraction** (zero or one occurrence; of the type DayCountFraction) The day count basis for the swap.

### 1.43.3 Used by:

- Element: simpleIrSwap

### 1.43.4 Derived Types:

### 1.43.5 Figure:

### 1.43.6 Schema Fragment:

```
<xsd:complexType name="SimpleIRSwap">
  <xsd:complexContent>
    <xsd:extension base="UnderlyingAsset">
      <xsd:sequence>
        <xsd:element name="term" type="Interval">

      </xsd:sequence>
    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

## 1.44 SingleUnderlyer

### 1.44.1 Description:

A type describing a single underlyer

### 1.44.2 Contents:

**underlyingAsset** (exactly one occurrence; of the type Asset) Define the underlying asset when it is a listed security.

**openUnits** (zero or one occurrence; of the type xsd:decimal) The number of units (index or securities) that constitute the underlyer of the swap. In the case of a basket swap, this element is used to reference both the number of basket units, and the number of each asset components of the basket when these are expressed in absolute terms.

**dividendPayout** (zero or one occurrence; of the type DividendPayout) Specifies the dividend payout ratio associated with an equity underlyer. A basket swap can have different payout ratios across the various underlying constituents. In certain cases the actual ratio is not known on trade inception, and only general conditions are then specified. Users should note that FpML makes a distinction between the derivative contract and the underlyer of the contract. It would be better if the agreed dividend payout on a derivative contract was modelled at the level of the derivative contract, an approach which may be adopted in the next major version of FpML.

**couponPayment** (zero or one occurrence; of the type PendingPayment) The next upcoming coupon payment.

### 1.44.3 Used by:

- Complex type: Underlyer

### 1.44.4 Derived Types:

### 1.44.5 Figure:

## 1.45 Underlyer

### 1.45.1 Description:

A type describing the whole set of possible underlyers: single underlyers or multiple underlyers, each of these having either security or index components.

### 1.45.2 Contents:

Either

**singleUnderlyer** (exactly one occurrence; of the type SingleUnderlyer) Describes the swap's underlyer when it has only one asset component.

Or

**basket** (exactly one occurrence; of the type Basket) Describes the swap's underlyer when it has multiple asset components.

### 1.45.3 Used by:

- Complex type: DeprecatedEquityLeg
- Complex type: DeprecatedVarianceLeg
- Complex type: DirectionalLegUnderlyer
- Complex type: EquityDerivativeBase
- Complex type: ReturnSwapLegUnderlyer

### 1.45.4 Derived Types:

## 1.46 UnderlyingAsset

### 1.46.1 Description:

A type describing the basic components of a security of index underlyer.

### 1.46.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type Asset)

- A generic type describing the basic components of an asset.

**currency** (zero or one occurrence; of the type Currency) The currency in which an amount is denominated.

**exchangeld** (zero or one occurrence; of the type Exchangeld)

**clearanceSystem** (zero or one occurrence; of the type ClearanceSystem)

**definition** (zero or one occurrence; of the type ProductReference) An optional reference to a full FpML product that defines the simple product in greater detail. In case of inconsistency between the terms of the simple product and those of the detailed definition, the values in the simple product override those in the detailed definition.

### 1.46.3 Used by:

- Complex type: Deposit
- Complex type: ExchangeTraded
- Complex type: FxRateAsset
- Complex type: Loan
- Complex type: Mortgage
- Complex type: MutualFund
- Complex type: RateIndex
- Complex type: SimpleCreditDefaultSwap
- Complex type: SimpleFra
- Complex type: SimpleIRSwap

### 1.46.4 Derived Types:

- Complex type: Deposit
- Complex type: ExchangeTraded
- Complex type: FxRateAsset
- Complex type: Loan
- Complex type: Mortgage
- Complex type: MutualFund
- Complex type: RateIndex
- Complex type: SimpleCreditDefaultSwap
- Complex type: SimpleFra
- Complex type: SimpleIRSwap

## ***2 Global Elements***

## 2.1 bond

### 2.1.1 Description:

Defines the underlying asset when it is a bond.

### 2.1.2 Contents:

Element bond is defined by the complex type Bond

### 2.1.3 Used by:

- Complex type: BondReference
- Complex type: ReferenceObligation

### 2.1.4 Substituted by:

### 2.1.5 Figure:

### 2.1.6 Schema Fragment:

```
<xsd:element name="bond" type="Bond" substitutionGroup="underlyingAsset">  
  <xsd:annotation>  
    <xsd:documentation xml:lang="en">  
      Defines the underlying asset when it is a bond.  
    </xsd:documentation>  
  </xsd:annotation>  
</xsd:element>
```

## 2.2 cash

### 2.2.1 Description:

Defines a simple underlying asset type that is a cash payment. Used for specifying discounting factors for future cash flows in the pricing and risk model.

### 2.2.2 Contents:

Element cash is defined by the complex type Cash

### 2.2.3 Used by:

### 2.2.4 Substituted by:

### 2.2.5 Figure:

### 2.2.6 Schema Fragment:

```
<xsd:element name="cash" type="Cash" substitutionGroup="underlyingAsset">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">

      the pricing and risk model.
    </xsd:documentation>
  </xsd:annotation>
</xsd:element>
```

## 2.3 convertibleBond

### 2.3.1 Description:

Defines the underlying asset when it is a convertible bond.

### 2.3.2 Contents:

Element convertibleBond is defined by the complex type ConvertibleBond

### 2.3.3 Used by:

- Complex type: ReferenceObligation

### 2.3.4 Substituted by:

### 2.3.5 Figure:

### 2.3.6 Schema Fragment:

    </xsd:documentation>  
  </xsd:annotation>  
</xsd:element>
```

## **2.4 deposit**

### **2.4.1 Description:**

Defines a simple underlying asset that is a term deposit.

### **2.4.2 Contents:**

Element deposit is defined by the complex type Deposit

### **2.4.3 Used by:**

### **2.4.4 Substituted by:**

### **2.4.5 Figure:**

### **2.4.6 Schema Fragment:**

```
<xsd:element name="deposit" type="Deposit" substitutionGroup="underlyingAsset">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      Defines a simple underlying asset that is a term deposit.
    </xsd:documentation>
  </xsd:annotation>
</xsd:element>
```

## **2.5 equity**

### **2.5.1 Description:**

Defines the underlying asset when it is a listed equity.

### **2.5.2 Contents:**

Element equity is defined by the complex type EquityAsset

### **2.5.3 Used by:**

### **2.5.4 Substituted by:**

### **2.5.5 Figure:**

### **2.5.6 Schema Fragment:**

```
<xsd:element name="equity" type="EquityAsset" substitutionGroup="underlyingAsset">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      Defines the underlying asset when it is a listed equity.

  </xsd:annotation>
</xsd:element>
```

## 2.6 exchangeTradedFund

### 2.6.1 Description:

Defines the underlying asset when it is an exchange-traded fund.

### 2.6.2 Contents:

Element exchangeTradedFund is defined by the complex type ExchangeTradedFund

### 2.6.3 Used by:

### 2.6.4 Substituted by:

### 2.6.5 Figure:

### 2.6.6 Schema Fragment:

```
<xsd:element name="exchangeTradedFund" type="ExchangeTradedFund" substitutionGroup="underlyingAsset">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      Defines the underlying asset when it is an exchange-traded fund.
    </xsd:documentation>
  </xsd:annotation>
</xsd:element>
```

## **2.7 future**

### **2.7.1 Description:**

Defines the underlying asset when it is a listed future contract.

### **2.7.2 Contents:**

Element future is defined by the complex type Future

### **2.7.3 Used by:**

### **2.7.4 Substituted by:**

### **2.7.5 Figure:**

### **2.7.6 Schema Fragment:**

```
<xsd:element name="future" type="Future" substitutionGroup="underlyingAsset">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      Defines the underlying asset when it is a listed future contract.
    </xsd:documentation>
  </xsd:annotation>
</xsd:element>
```

## 2.8 fxRate

### 2.8.1 Description:

Defines a simple underlying asset type that is an FX rate. Used for specifying FX rates in the pricing and risk model.

### 2.8.2 Contents:

Element fxRate is defined by the complex type FxRateAsset

### 2.8.3 Used by:

### 2.8.4 Substituted by:

### 2.8.5 Figure:

### 2.8.6 Schema Fragment:

```
<xsd:element name="fxRate" type="FxRateAsset" substitutionGroup="underlyingAsset">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      Defines a simple underlying asset type that is an FX rate. Used
      for specifying FX rates in the pricing and risk model.
    </xsd:documentation>
  </xsd:annotation>
</xsd:element>
```

## **2.9 index**

### **2.9.1 Description:**

Defines the underlying asset when it is a financial index.

### **2.9.2 Contents:**

Element index is defined by the complex type Index

### **2.9.3 Used by:**

### **2.9.4 Substituted by:**

### **2.9.5 Figure:**

### **2.9.6 Schema Fragment:**

```
<xsd:element name="index" type="Index" substitutionGroup="underlyingAsset">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      Defines the underlying asset when it is a financial index.
    </xsd:documentation>
  </xsd:annotation>
</xsd:element>
```

## 2.10 loan

### 2.10.1 Description:

Defines a simple underlying asset that is a loan.

### 2.10.2 Contents:

Element loan is defined by the complex type Loan

### 2.10.3 Used by:

- Complex type: ReferenceObligation

### 2.10.4 Substituted by:

### 2.10.5 Figure:

### 2.10.6 Schema Fragment:

```
<xsd:element name="loan" type="Loan" substitutionGroup="underlyingAsset">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      Defines a simple underlying asset that is a loan.
    </xsd:documentation>
  </xsd:annotation>
</xsd:element>
```

## 2.11 mortgage

### 2.11.1 Description:

Defines an underlying asset that is a mortgage.

### 2.11.2 Contents:

Element mortgage is defined by the complex type Mortgage

### 2.11.3 Used by:

- Complex type: ReferenceObligation

### 2.11.4 Substituted by:

### 2.11.5 Figure:

### 2.11.6 Schema Fragment:

```
<xsd:element name="mortgage" type="Mortgage" substitutionGroup="underlyingAsset">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      Defines an underlying asset that is a mortgage.
    </xsd:documentation>
  </xsd:annotation>
</xsd:element>
```

## **2.12 mutualFund**

### **2.12.1 Description:**

Defines the underlying asset when it is a mutual fund.

### **2.12.2 Contents:**

Element mutualFund is defined by the complex type MutualFund

### **2.12.3 Used by:**

### **2.12.4 Substituted by:**

### **2.12.5 Figure:**

### **2.12.6 Schema Fragment:**

```
<xsd:element name="mutualFund" type="MutualFund" substitutionGroup="underlyingAsset">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      Defines the underlying asset when it is a mutual fund.
    </xsd:documentation>
  </xsd:annotation>
</xsd:element>
```

## 2.13 rateIndex

### 2.13.1 Description:

Defines a simple underlying asset that is an interest rate index. Used for specifying benchmark assets in the market environment in the pricing and risk model.

### 2.13.2 Contents:

Element rateIndex is defined by the complex type RateIndex

### 2.13.3 Used by:

### 2.13.4 Substituted by:

### 2.13.5 Figure:

### 2.13.6 Schema Fragment:

```
<xsd:element name="rateIndex" type="RateIndex" substitutionGroup="underlyingAsset">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      Defines a simple underlying asset that is an interest rate index.
      Used for specifying benchmark assets in the market environment in
      the pricing and risk model.
    </xsd:documentation>
  </xsd:annotation>
</xsd:element>
```

## 2.14 simpleCreditDefaultSwap

### 2.14.1 Description:

Defines a simple underlying asset that is a credit default swap.

### 2.14.2 Contents:

Element simpleCreditDefaultSwap is defined by the complex type SimpleCreditDefaultSwap

### 2.14.3 Used by:

### 2.14.4 Substituted by:

### 2.14.5 Figure:

### 2.14.6 Schema Fragment:

```
<xsd:element name="simpleCreditDefaultSwap" type="SimpleCreditDefaultSwap" substitutionGroup="u"
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      Defines a simple underlying asset that is a credit default swap.
    </xsd:documentation>
  </xsd:annotation>
</xsd:element>
```

## 2.15 simpleFra

### 2.15.1 Description:

Defines a simple underlying asset that is a forward rate agreement.

### 2.15.2 Contents:

Element simpleFra is defined by the complex type SimpleFra

### 2.15.3 Used by:

### 2.15.4 Substituted by:

### 2.15.5 Figure:

### 2.15.6 Schema Fragment:

```
<xsd:element name="simpleFra" type="SimpleFra" substitutionGroup="underlyingAsset">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      Defines a simple underlying asset that is a forward rate
      agreement.
    </xsd:documentation>
  </xsd:annotation>
</xsd:element>
```

## 2.16 simpleIrSwap

### 2.16.1 Description:

Defines a simple underlying asset that is a swap.

### 2.16.2 Contents:

Element simpleIrSwap is defined by the complex type SimpleIRSwap

### 2.16.3 Used by:

### 2.16.4 Substituted by:

### 2.16.5 Figure:

### 2.16.6 Schema Fragment:

```
<xsd:element name="simpleIrSwap" type="SimpleIRSwap" substitutionGroup="underlyingAsset">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      Defines a simple underlying asset that is a swap.
    </xsd:documentation>
  </xsd:annotation>
</xsd:element>
```

## 2.17 underlyingAsset

### 2.17.1 Description:

Define the underlying asset when it is a listed security.

### 2.17.2 Contents:

Element underlyingAsset is defined by the complex type Asset

### 2.17.3 Used by:

- Complex type: BasketConstituent
- Complex type: CashflowObservation
- Complex type: InstrumentSet
- Complex type: SingleUnderlyer
- Complex type: TradeUnderlyer

### 2.17.4 Substituted by:

- Element: bond
- Element: cash
- Element: convertibleBond
- Element: deposit
- Element: equity
- Element: exchangeTradedFund
- Element: future
- Element: fxRate
- Element: index
- Element: loan
- Element: mortgage
- Element: mutualFund
- Element: rateIndex
- Element: simpleCreditDefaultSwap
- Element: simpleFra
- Element: simpleIrrSwap

### 2.17.5 Figure:

### 2.17.6 Schema Fragment:

```
<xsd:element name="underlyingAsset" type="Asset" abstract="true">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      Define the underlying asset when it is a listed security.
    </xsd:documentation>
  </xsd:annotation>
</xsd:element>
```

## **3 Groups**

## 3.1 BasketIdentifier.model

### 3.1.1 Description:

A group that specifies a name and an identifier for a given basket.

### 3.1.2 Contents:

### 3.1.3 Used by:

- Complex type: Basket
- Complex type: BasketReferenceInformation

### 3.1.4 Figure:

### 3.1.5 Schema Fragment:

```
<xsd:group name="BasketIdentifier.model">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A group that specifies a name and an identifier for a given
      basket.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:choice>
    <xsd:sequence>
      <xsd:element name="basketName" type="BasketName">
        <xsd:annotation>
          <xsd:documentation xml:lang="en">
            The name of the basket expressed as a free format string.
            FpML does not define usage rules for this element.
          </xsd:documentation>
        </xsd:annotation>
      </xsd:element>
      <xsd:element name="basketId" type="BasketId" minOccurs="0" maxOccurs="unbounded">
        <xsd:annotation>
          <xsd:documentation xml:lang="en">
            A CDS basket identifier
          </xsd:documentation>
        </xsd:annotation>
      </xsd:element>
    </xsd:sequence>
    <xsd:sequence>
      <xsd:element name="basketId" type="BasketId" maxOccurs="unbounded">
        <xsd:annotation>
          <xsd:documentation xml:lang="en">
            A CDS basket identifier
          </xsd:documentation>
        </xsd:annotation>
      </xsd:element>
    </xsd:sequence>
  </xsd:choice>
</xsd:group>
```

## 3.2 BondCalculation.model

### 3.2.1 Description:

A group that specifies Bond Calculation elements

### 3.2.2 Contents:

**paymentFrequency** (zero or one occurrence; of the type Interval) Specifies the frequency at which the bond pays, e.g. 6M.

**dayCountFraction** (zero or one occurrence; of the type DayCountFraction) The day count basis for the bond.

### 3.2.3 Used by:

- Complex type: Bond
- Complex type: Mortgage

### 3.2.4 Figure:

### 3.2.5 Schema Fragment:

```
<xsd:group name="BondCalculation.model">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A group that specifies Bond Calculation elements
    </xsd:documentation>
  </xsd:annotation>
  <xsd:sequence>
    <xsd:element name="paymentFrequency" type="Interval" minOccurs="0">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          Specifies the frequency at which the bond pays, e.g. 6M.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
    <xsd:element name="dayCountFraction" type="DayCountFraction" minOccurs="0">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          The day count basis for the bond.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
  </xsd:sequence>
</xsd:group>
```

## 3.3 BondChoice.model

### 3.3.1 Description:

A model group which provides choices between all bond underlyers.

### 3.3.2 Contents:

Either

**bond** (exactly one occurrence; of the type Bond) Defines the underlying asset when it is a bond.

Or

**convertibleBond** (exactly one occurrence; of the type ConvertibleBond) Defines the underlying asset when it is a convertible bond.

### 3.3.3 Used by:

- Complex type: BondOption

### 3.3.4 Figure:

### 3.3.5 Schema Fragment:

```
<xsd:group name="BondChoice.model">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A model group which provides choices between all bond underlyers.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:choice>
    <xsd:element ref="bond">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          A bond instrument referenced by a contract
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
    <xsd:element ref="convertibleBond">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          A convertible bond instrument referenced by a contract.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
  </xsd:choice>
</xsd:group>
```

## 3.4 BondContent.model

### 3.4.1 Description:

A group that specifies Bond Content elements

### 3.4.2 Contents:

Either

**issuerName** (exactly one occurrence; of the type xsd:string)

Or

**issuerPartyReference** (exactly one occurrence; of the type PartyReference)

**seniority** (zero or one occurrence; of the type CreditSeniority) The repayment precedence of a debt instrument.

**couponType** (zero or one occurrence; of the type CouponType) Specifies if the bond has a variable coupon, step-up/down coupon or a zero-coupon.

**couponRate** (zero or one occurrence; of the type xsd:decimal) Specifies the coupon rate (expressed in percentage) of a fixed income security or convertible bond.

**maturity** (zero or one occurrence; of the type xsd:date) The date when the principal amount of a security becomes due and payable.

### 3.4.3 Used by:

- Complex type: Bond
- Complex type: Mortgage

### 3.4.4 Figure:

### 3.4.5 Schema Fragment:

```
<xsd:group name="BondContent.model">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A group that specifies Bond Content elements
    </xsd:documentation>
  </xsd:annotation>
  <xsd:sequence>
    <xsd:choice minOccurs="0">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          Specifies the issuer name of a fixed income security or
          convertible bond. This name can either be explicitly stated,
          or specified as an href into another element of the document,
          such as the obligor
        </xsd:documentation>
      </xsd:annotation>
      <xsd:element name="issuerName" type="xsd:string"/>
      <xsd:element name="issuerPartyReference" type="PartyReference"/>
    </xsd:choice>
    <xsd:element name="seniority" type="CreditSeniority" minOccurs="0">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          The repayment precedence of a debt instrument.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
    <xsd:element name="couponType" type="CouponType" minOccurs="0">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          Specifies if the bond has a variable coupon, step-up/down
          coupon or a zero-coupon.

        <xsd:documentation xml:lang="en">
          Specifies the coupon rate (expressed in percentage) of a
          fixed income security or convertible bond.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
  </xsd:sequence>
</xsd:group>
```

```
</xsd:annotation>
</xsd:element>
<xsd:element name="maturity" type="xsd:date" minOccurs="0">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      The date when the principal amount of a security becomes due
      and payable.
    </xsd:documentation>
  </xsd:annotation>
</xsd:element>
</xsd:sequence>
</xsd:group>
```

## 3.5 CreditEntity.model

### 3.5.1 Description:

An item which has credit characteristics that can be modeled, e.g. a firm, index, or region.

### 3.5.2 Contents:

Either

**referenceEntity** (exactly one occurrence; of the type LegalEntity) The entity for which this is defined.

Or

**creditEntityReference** (exactly one occurrence; of the type LegalEntityReference) An XML reference a credit entity defined elsewhere in the document.

### 3.5.3 Used by:

- Complex type: SimpleCreditDefaultSwap

### 3.5.4 Figure:

### 3.5.5 Schema Fragment:

```
<xsd:group name="CreditEntity.model">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      An item which has credit characteristics that can be modeled,
      e.g. a firm, index, or region.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:choice>
    <xsd:element name="referenceEntity" type="LegalEntity">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          The entity for which this is defined.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
    <xsd:element name="creditEntityReference" type="LegalEntityReference">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          An XML reference a credit entity defined elsewhere in the
          document.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
  </xsd:choice>
</xsd:group>
```

## 3.6 ExchangeIdentifier.model

### 3.6.1 Description:

### 3.6.2 Contents:

**relatedExchangeId** (zero or more occurrences; of the type ExchangeId) A short form unique identifier for a related exchange. If the element is not present then the exchange shall be the primary exchange on which listed futures and options on the underlying are listed. The term "Exchange" is assumed to have the meaning as defined in the ISDA 2002 Equity Derivatives Definitions.

**optionsExchangeId** (zero or more occurrences; of the type ExchangeId) A short form unique identifier for an exchange on which the reference option contract is listed. This is to address the case where the reference exchange for the future is different than the one for the option. The options Exchange is referenced on share options when Merger Elections are selected as Options Exchange Adjustment.

### 3.6.3 Used by:

- Complex type: ExchangeTraded

### 3.6.4 Figure:

### 3.6.5 Schema Fragment:

```
<xsd:group name="ExchangeIdentifier.model">
  <xsd:sequence>
    <xsd:element name="relatedExchangeId" type="ExchangeId" minOccurs="0" maxOccurs="unbounded">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          A short form unique identifier for a related exchange. If the
          element is not present then the exchange shall be the primary
          exchange on which listed futures and options on the
          underlying are listed. The term "Exchange" is assumed to have
          the meaning as defined in the ISDA 2002 Equity Derivatives
          Definitions.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
    <xsd:element name="optionsExchangeId" type="ExchangeId" minOccurs="0" maxOccurs="unbounded">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          A short form unique identifier for an exchange on which the
          reference option contract is listed. This is to address the
          case where the reference exchange for the future is different
          than the one for the option. The options Exchange is
          referenced on share options when Merger Elections are
          selected as Options Exchange Adjustment.
        </xsd:documentation>
      </xsd:annotation>

</xsd:group>
```

## 3.7 Quotation.model

### 3.7.1 Description:

Some kind of numerical measure about an asset, eg. its price or NPV, together with characteristics of that measure.

### 3.7.2 Contents:

**value** (zero or one occurrence; of the type xsd:decimal) The value of the the quotation.

**measureType** (zero or one occurrence; of the type AssetMeasureType) The type of the value that is measured. This could be an NPV, a cash flow, a clean price, etc.

**quoteUnits** (zero or one occurrence; of the type PriceQuoteUnits) The optional units that the measure is expressed in. If not supplied, this is assumed to be a price/value in currency units.

**side** (zero or one occurrence; of the type QuotationSideEnum) The side (bid/mid/ask) of the measure.

**currency** (zero or one occurrence; of the type Currency) The optional currency that the measure is expressed in. If not supplied, this is defaulted from the reportingCurrency in the valuationScenarioDefinition.

**timing** (zero or one occurrence; of the type QuoteTiming) When during a day the quote is for. Typically, if this element is supplied, the QuoteLocation needs also to be supplied.

**informationSource** (zero or more occurrences; of the type InformationSource) The information source where a published or displayed market rate will be obtained, e.g. Telerate Page 3750.

**time** (zero or one occurrence; of the type xsd:dateTime) When the quote was observed or derived.

**valuationDate** (zero or one occurrence; of the type xsd:date) When the quote was computed.

**expiryTime** (zero or one occurrence; of the type xsd:dateTime) When does the quote cease to be valid.

**cashFlowType** (zero or one occurrence; of the type CashflowType) For cash flows, the type of the cash flows. Examples include: Coupon payment, Premium Fee, Settlement Fee, Brokerage Fee, etc.

### 3.7.3 Used by:

- Complex type: BasicQuotation
- Complex type: PricingStructurePoint
- Complex type: Quotation

### 3.7.4 Figure:

### 3.7.5 Schema Fragment:

```
<xsd:group name="Quotation.model">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      Some kind of numerical measure about an asset, eg. its price or
      NPV, together with characteristics of that measure.

          The characteristics of the quotation.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:group>
  </xsd:sequence>
</xsd:group>
```

## 3.8 QuotationCharacteristics.model

### 3.8.1 Description:

A group collecting a set of characteristics that can be used to describe a quotation.

### 3.8.2 Contents:

**measureType** (zero or one occurrence; of the type AssetMeasureType) The type of the value that is measured. This could be an NPV, a cash flow, a clean price, etc.

**quoteUnits** (zero or one occurrence; of the type PriceQuoteUnits) The optional units that the measure is expressed in. If not supplied, this is assumed to be a price/value in currency units.

**side** (zero or one occurrence; of the type QuotationSideEnum) The side (bid/mid/ask) of the measure.

**currency** (zero or one occurrence; of the type Currency) The optional currency that the measure is expressed in. If not supplied, this is defaulted from the reportingCurrency in the valuationScenarioDefinition.

**timing** (zero or one occurrence; of the type QuoteTiming) When during a day the quote is for. Typically, if this element is supplied, the QuoteLocation needs also to be supplied.

Either

**businessCenter** (exactly one occurrence; of the type BusinessCenter) A city or other business center.

Or

**exchangeld** (exactly one occurrence; of the type Exchangeld) The exchange (e.g. stock or futures exchange) from which the quote is obtained.

**informationSource** (zero or more occurrences; of the type InformationSource) The information source where a published or displayed market rate will be obtained, e.g. Telerate Page 3750.

**time** (zero or one occurrence; of the type xsd:dateTime) When the quote was observed or derived.

**valuationDate** (zero or one occurrence; of the type xsd:date) When the quote was computed.

**expiryTime** (zero or one occurrence; of the type xsd:dateTime) When does the quote cease to be valid.

**cashFlowType** (zero or one occurrence; of the type CashflowType) For cash flows, the type of the cash flows. Examples include: Coupon payment, Premium Fee, Settlement Fee, Brokerage Fee, etc.

## 3.9 QuoteLocation.model

### 3.9.1 Description:

A group describing where a quote was or will be obtained, e.g. observed or calculated.

### 3.9.2 Contents:

Either

**businessCenter** (exactly one occurrence; of the type BusinessCenter) A city or other business center.

Or

**exchangeId** (exactly one occurrence; of the type ExchangeId) The exchange (e.g. stock or futures exchange) from which the quote is obtained.

### 3.9.3 Used by:

### 3.9.4 Figure:

### 3.9.5 Schema Fragment:

```
<xsd:group name="QuoteLocation.model">

# ***1 Global Complex Types***

## 1.1 BondOption

### 1.1.1 Description:

A Bond Option

### 1.1.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type OptionBaseExtended)

- Base type for options starting with the 4-3 release, until we refactor the schema as part of the 5-0 release series

**strike** (exactly one occurrence; of the type BondOptionStrike) Strike of the the Bond Option.

Either

**bond** (exactly one occurrence; of the type Bond) Defines the underlying asset when it is a bond.

Or

**convertibleBond** (exactly one occurrence; of the type ConvertibleBond) Defines the underlying asset when it is a convertible bond.

### 1.1.3 Used by:

- Element: bondOption

### 1.1.4 Derived Types:

### 1.1.5 Figure:

### 1.1.6 Schema Fragment:

```
<xsd:complexType name="BondOption">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A Bond Option
    </xsd:documentation>
  </xsd:annotation>
  <xsd:complexContent>
    <xsd:extension base="OptionBaseExtended">
      <xsd:sequence>
        <xsd:element name="strike" type="BondOptionStrike">
          <xsd:annotation>
            <xsd:documentation xml:lang="en">
              Strike of the the Bond Option.
            </xsd:documentation>
          </xsd:annotation>
        </xsd:element>
        <xsd:group ref="BondChoice.model"/>
      </xsd:sequence>
    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

## 1.2 BondOptionStrike

### 1.2.1 Description:

A complex type to specify the strike of a bond or convertible bond option.

### 1.2.2 Contents:

Either

**referenceSwapCurve** (exactly one occurrence; of the type ReferenceSwapCurve) The strike of an option when expressed by reference to a swap curve. (Typically the case for a convertible bond option.)

Or

**price** (exactly one occurrence; of the type OptionStrike)

### 1.2.3 Used by:

- Complex type: BondOption

### 1.2.4 Derived Types:

### 1.2.5 Figure:

### 1.2.6 Schema Fragment:

```
<xsd:complexType name="BondOptionStrike">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A complex type to specify the strike of a bond or convertible
      bond option.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:choice>
    <xsd:element name="referenceSwapCurve" type="ReferenceSwapCurve">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          The strike of an option when expressed by reference to a swap
          curve. (Typically the case for a convertible bond option.)
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
    <xsd:element name="price" type="OptionStrike"/>
  </xsd:choice>
</xsd:complexType>
```

## 1.3 MakeWholeAmount

### 1.3.1 Description:

A complex type to specify the amount to be paid by the buyer of the option if the option is exercised prior to the Early Call Date (Typically applicable to the convertible bond options).

### 1.3.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type SwapCurveValuation)

- A complex type to specify a valuation swap curve, which is used as part of the strike construct for the bond and convertible bond options.

**interpolationMethod** (zero or one occurrence; of the type InterpolationMethod) The type of interpolation method that the calculation agent reserves the right to use.

**earlyCallDate** (exactly one occurrence; of the type IdentifiedDate) Date prior to which the option buyer will have to pay a Make Whole Amount to the option seller if he/she exercises the option.

### 1.3.3 Used by:

- Complex type: ReferenceSwapCurve

### 1.3.4 Derived Types:

### 1.3.5 Figure:

### 1.3.6 Schema Fragment:

```
<xsd:complexType name="MakeWholeAmount">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A complex type to specify the amount to be paid by the buyer of
      the option if the option is exercised prior to the Early Call
      Date (Typically applicable to the convertible bond options).
    </xsd:documentation>
  </xsd:annotation>
  <xsd:complexContent>
    <xsd:extension base="SwapCurveValuation">
      <xsd:sequence>
        <xsd:element name="interpolationMethod" type="InterpolationMethod" minOccurs="0">
          <xsd:annotation>
            <xsd:documentation xml:lang="en">
              The type of interpolation method that the calculation
              agent reserves the right to use.
            </xsd:documentation>
          </xsd:annotation>
        </xsd:element>
        <xsd:element name="earlyCallDate" type="IdentifiedDate">
          <xsd:annotation>
            <xsd:documentation xml:lang="en">
              Date prior to which the option buyer will have to pay a
              Make Whole Amount to the option seller if he/she
              exercises the option.
            </xsd:documentation>
          </xsd:annotation>
        </xsd:element>
      </xsd:sequence>
    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

## 1.4 ReferenceSwapCurve

### 1.4.1 Description:

A complex type used to specify the option and convertible bond option strike when expressed in reference to a swap curve.

### 1.4.2 Contents:

**swapUnwindValue** (exactly one occurrence; of the type SwapCurveValuation)

**makeWholeAmount** (zero or one occurrence; of the type MakeWholeAmount) Amount to be paid by the buyer of the option if the option is exercised prior to the Early Call Date. (The market practice in the convertible bond option space being that the buyer should be penalized if he/she exercises the option early on.)

### 1.4.3 Used by:

- Complex type: BondOptionStrike

### 1.4.4 Derived Types:

### 1.4.5 Figure:

### 1.4.6 Schema Fragment:

```
<xsd:complexType name="ReferenceSwapCurve">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A complex type used to specify the option and convertible bond
      option strike when expressed in reference to a swap curve.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:sequence>
    <xsd:element name="swapUnwindValue" type="SwapCurveValuation"/>
    <xsd:element name="makeWholeAmount" type="MakeWholeAmount" minOccurs="0">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          Amount to be paid by the buyer of the option if the option is
          exercised prior to the Early Call Date. (The market practice
          in the convertible bond option space being that the buyer
          should be penalized if he/she exercises the option early on.)
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
  </xsd:sequence>
</xsd:complexType>
```

## 1.5 SwapCurveValuation

### 1.5.1 Description:

A complex type to specify a valuation swap curve, which is used as part of the strike construct for the bond and convertible bond options.

### 1.5.2 Contents:

**floatingRateIndex** (exactly one occurrence; of the type FloatingRateIndex)

**indexTenor** (zero or one occurrence; of the type Interval) The ISDA Designated Maturity, i.e. the tenor of the floating rate.

**spread** (exactly one occurrence; of the type xsd:decimal) Spread in basis points over the floating rate index.

**side** (zero or one occurrence; of the type QuotationSideEnum) The side (bid/mid/ask) of the measure.

### 1.5.3 Used by:

- Complex type: MakeWholeAmount
- Complex type: ReferenceSwapCurve

### 1.5.4 Derived Types:

- Complex type: MakeWholeAmount

### 1.5.5 Figure:

### 1.5.6 Schema Fragment:

```
<xsd:complexType name="SwapCurveValuation">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A complex type to specify a valuation swap curve, which is used
      as part of the strike construct for the bond and convertible bond
      options.

## 1.1 AdditionalFixedPayments

### 1.1.1 Description:

### 1.1.2 Contents:

**interestShortfallReimbursement** (zero or one occurrence; of the type Empty) An additional Fixed Payment Event. Corresponds to the payment by or on behalf of the Issuer of an actual interest amount in respect to the reference obligation that is greater than the expected interest amount. ISDA 2003 Term: Interest Shortfall Reimbursement.

**principalShortfallReimbursement** (zero or one occurrence; of the type Empty) An additional Fixed Payment Event. Corresponds to the payment by or on behalf of the Issuer of an actual principal amount in respect to the reference obligation that is greater than the expected principal amount. ISDA 2003 Term: Principal Shortfall Reimbursement.

**writedownReimbursement** (zero or one occurrence; of the type Empty) An Additional Fixed Payment. Corresponds to the payment by or on behalf of the issuer of an amount in respect to the reference obligation in reduction of the prior writedowns. ISDA 2003 Term: Writedown Reimbursement.

## 1.6 CashSettlementTerms

### 1.6.1 Description:

### 1.6.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type SettlementTerms)

- **valuationDate** (zero or one occurrence; of the type ValuationDate) The number of business days after conditions to settlement have been satisfied when the calculation agent obtains a price quotation on the Reference Obligation for purposes of cash settlement. There may be one or more valuation dates. This is typically specified if the cash settlement amount is not a fixed amount. ISDA 2003 Term: Valuation Date

**valuationTime** (zero or one occurrence; of the type BusinessCenterTime) The time of day in the specified business center when the calculation agent seeks quotations for an amount of the reference obligation for purposes of cash settlement. ISDA 2003 Term: Valuation Time

**quotationMethod** (zero or one occurrence; of the type QuotationRateTypeEnum) The type of price quotations to be requested from dealers when determining the market value of the reference obligation for purposes of cash settlement. For example, Bid, Offer or Mid-market. ISDA 2003 Term: Quotation Method

**quotationAmount** (zero or one occurrence; of the type Money) In the determination of a cash settlement amount, if weighted average quotations are to be obtained, the quotation amount specifies an upper limit to the outstanding principal balance of the reference obligation for which the quote should be obtained. If not specified, the ISDA definitions provide for a fallback amount equal to the floating rate payer calculation amount. ISDA 2003 Term: Quotation Amount

**minimumQuotationAmount** (zero or one occurrence; of the type Money) In the determination of a cash settlement amount, if weighted average quotations are to be obtained, the minimum quotation amount specifies a minimum intended threshold amount of outstanding principal balance of the reference obligation for which the quote should be obtained. If not specified, the ISDA definitions provide for a fallback amount of the lower of either USD 1,000,000 (or its equivalent in the relevant obligation currency) or the quotation amount. ISDA 2003 Term: Minimum Quotation Amount

**dealer** (zero or more occurrences; of the type xsd:string) A dealer from whom quotations are obtained by the calculation agent on the reference obligation for purposes of cash settlement. ISDA 2003 Term: Dealer

**cashSettlementBusinessDays** (zero or one occurrence; of the type xsd:nonNegativeInteger) The number of business days used in the determination of the cash settlement payment date. If a cash settlement amount is specified, the cash settlement payment date will be this number of business days following the calculation of the final price. If a cash settlement amount is not specified, the cash settlement payment date will be this number of business days after all conditions to settlement are satisfied. ISDA 2003 Term: Cash Settlement Date

**cashSettlementAmount** (zero or one occurrence; of the type Money) The amount paid by the seller to the buyer for cash settlement on the cash settlement date. If not otherwise specified, would typically be calculated as 100 (or the Reference Price) minus the price of the Reference Obligation (all expressed as a percentage) times Floating Rate Payer Calculation Amount. ISDA 2003 Term: Cash Settlement Amount

**accruedInterest** (zero or one occurrence; of the type xsd:boolean) Indicates whether accrued interest is included (true) or not (false). For cash settlement this specifies whether quotations should be obtained inclusive or not of accrued interest. For physical settlement this specifies whether the buyer should deliver the obligation with an outstanding principal balance that includes or excludes accrued interest. ISDA 2003 Term: Include/Exclude Accrued Interest

**valuationMethod** (zero or one occurrence; of the type ValuationMethodEnum) The ISDA defined methodology for determining the final price of the reference obligation for purposes of cash settlement. (ISDA 2003 Term: Valuation Method). For example, Market, Highest etc.

## 1.7 CreditDefaultSwap

### 1.7.1 Description:

### 1.7.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type Product)

- The base type which all FpML products extend.

**generalTerms** (exactly one occurrence; of the type GeneralTerms) This element contains all the data that appears in the section entitled "1. General Terms" in the 2003 ISDA Credit Derivatives Confirmation.

**feeLeg** (exactly one occurrence; of the type FeeLeg) This element contains all the terms relevant to defining the fixed amounts/payments per the applicable ISDA definitions.

**protectionTerms** (one or more occurrences; of the type ProtectionTerms) This element contains all the terms relevant to defining the applicable floating rate payer calculation amount, credit events and associated conditions to settlement, and reference obligations.

Either

**cashSettlementTerms** (exactly one occurrence; of the type CashSettlementTerms) This element contains all the ISDA terms relevant to cash settlement for when cash settlement is applicable. ISDA 2003 Term: Cash Settlement

Or

**physicalSettlementTerms** (exactly one occurrence; of the type PhysicalSettlementTerms) This element contains all the ISDA terms relevant to physical settlement for when physical settlement is applicable. ISDA 2003 Term: Physical Settlement

## 1.8 CreditDefaultSwapOption

### 1.8.1 Description:

A complex type to support the credit default swap option.

### 1.8.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type OptionBaseExtended)

- Base type for options starting with the 4-3 release, until we refactor the schema as part of the 5-0 release series

**strike** (exactly one occurrence; of the type CreditOptionStrike) Specifies the strike of the option on credit default swap.

**creditDefaultSwap** (exactly one occurrence; of the type CreditDefaultSwap) In a credit default swap one party (the protection seller) agrees to compensate another party (the protection buyer) if a specified company or Sovereign (the reference entity) experiences a credit event, indicating it is or may be unable to service its debts. The protection seller is typically paid a fee and/or premium, expressed as an annualized percent of the notional in basis points, regularly over the life of the transaction or otherwise as agreed by the parties.

### 1.8.3 Used by:

## 1.9 CreditOptionStrike

### 1.9.1 Description:

A complex type to specify the strike of a credit swaption or a credit default swap option.

### 1.9.2 Contents:

Either

**spread** (exactly one occurrence; of the type xsd:decimal) The strike of a credit default swap option or credit swaption when expressed as a spread per annum.

Or

**price** (exactly one occurrence; of the type xsd:decimal) The strike of a credit default swap option or credit swaption when expressed as in reference to the price of the underlying obligation(s) or index.

Or

**strikeReference** (exactly one occurrence; of the type FixedRateReference) The strike of a credit default swap option or credit swaption when expressed in reference to the spread of the underlying swap (typical practice in the case of single name swaps).

### 1.9.3 Used by:

- Complex type: CreditDefaultSwapOption

### 1.9.4 Derived Types:

### 1.9.5 Figure:

```

## 1.10 Deliverable Obligations

### 1.10.1 Description:

### 1.10.2 Contents:

**accruedInterest** (zero or one occurrence; of the type `xsd:boolean`) Indicates whether accrued interest is included (true) or not (false). For cash settlement this specifies whether quotations should be obtained inclusive or not of accrued interest. For physical settlement this specifies whether the buyer should deliver the obligation with an outstanding principal balance that includes or excludes accrued interest. ISDA 2003 Term: Include/Exclude Accrued Interest

**category** (zero or one occurrence; of the type `ObligationCategoryEnum`) Used in both obligations and deliverable obligations to represent a class or type of securities which apply. ISDA 2003 Term: Obligation Category/Deliverable Obligation Category

**notSubordinated** (zero or one occurrence; of the type `Empty`) An obligation and deliverable obligation characteristic. An obligation that ranks at least equal with the most senior Reference Obligation in priority of payment or, if no Reference Obligation is specified in the related Confirmation, the obligations of the Reference Entity that are senior. ISDA 2003 Term: Not Subordinated

**specifiedCurrency** (zero or one occurrence; of the type `SpecifiedCurrency`) An obligation and deliverable obligation characteristic. The currency or currencies in which an obligation or deliverable obligation must be payable. ISDA 2003 Term: Specified Currency

**notSovereignLender** (zero or one occurrence; of the type `Empty`) An obligation and deliverable obligation characteristic. Any obligation that is not primarily (majority) owed to a Sovereign or Supranational Organization. ISDA 2003 Term: Not Sovereign Lender

**notDomesticCurrency** (zero or one occurrence; of the type `NotDomesticCurrency`) An obligation and deliverable obligation characteristic. Any obligation that is payable in any currency other than the domestic currency. Domestic currency is either the currency so specified or, if no currency is specified, the currency of (a) the reference entity, if the reference entity is a sovereign, or (b) the jurisdiction in which the relevant reference entity is organised, if the reference entity is not a sovereign. ISDA 2003 Term: Not Domestic Currency

**notDomesticLaw** (zero or one occurrence; of the type `Empty`) An obligation and deliverable obligation characteristic. If the reference entity is a Sovereign, this means any obligation that is not subject to the laws of the reference entity. If the reference entity is not a sovereign, this means any obligation that is not subject to the laws of the jurisdiction of the reference entity. ISDA 2003 Term: Not Domestic Law

**listed** (zero or one occurrence; of the type `Empty`) An obligation and deliverable obligation characteristic. Indicates whether or not the obligation is quoted, listed or ordinarily purchased and sold on an exchange. ISDA 2003 Term: Listed

**notContingent** (zero or one occurrence; of the type `Empty`) A deliverable obligation characteristic. In essence Not Contingent means the repayment of principal cannot be dependant on a formula/index, i.e. to prevent the risk of being delivered an instrument that may never pay any element of principal, and to ensure that the obligation is interest bearing (on a regular schedule). ISDA 2003 Term: Not Contingent

**notDomesticIssuance** (zero or one occurrence; of the type `Empty`) An obligation and deliverable obligation characteristic. Any obligation other than an obligation that was intended to be offered for sale primarily in the domestic market of the relevant Reference Entity. This specifies that the obligation must be an internationally recognized bond. ISDA 2003 Term: Not Domestic Issuance

**assignableLoan** (zero or one occurrence; of the type `PCDeliverableObligationCharac`) A deliverable obligation characteristic. A loan that is freely assignable to a bank or financial institution without the consent of the Reference Entity or the guarantor, if any, of the loan (or the consent of the applicable borrower if a Reference Entity is guaranteeing the loan) or any agent. ISDA 2003 Term: Assignable Loan

**consentRequiredLoan** (zero or one occurrence; of the type `PCDeliverableObligationCharac`) A deliverable obligation characteristic. A loan that is capable of being assigned with the consent of the Reference Entity or the guarantor, if any, of the loan or any agent. ISDA 2003 Term: Consent Required Loan

**directLoanParticipation** (zero or one occurrence; of the type `LoanParticipation`) A deliverable obligation characteristic. A loan with a participation agreement whereby the buyer is capable of creating, or procuring the creation of, a contractual right in favour of the seller that provides the seller with recourse to the participation seller for a specified share in any payments due under the relevant loan which are received by the participation seller. ISDA 2003 Term: Direct Loan Participation

**transferable** (zero or one occurrence; of the type `Empty`) A deliverable obligation characteristic. An obligation

that is transferable to institutional investors without any contractual, statutory or regulatory restrictions. ISDA 2003 Term: Transferable

**maximumMaturity** (zero or one occurrence; of the type Interval) A deliverable obligation characteristic. An obligation that has a remaining maturity from the Physical Settlement Date of not greater than the period specified. ISDA 2003 Term: Maximum Maturity

**acceleratedOrMatured** (zero or one occurrence; of the type Empty) A deliverable obligation characteristic. An obligation at time of default is due to mature and due to be repaid, or as a result of downgrade/bankruptcy is due to be repaid as a result of an acceleration clause. ISDA 2003 Term: Accelerated or Matured

**notBearer** (zero or one occurrence; of the type Empty) A deliverable obligation characteristic. Any obligation that is not a bearer instrument. This applies to Bonds only and is meant to avoid tax, fraud and security/delivery provisions that can potentially be associated with Bearer Bonds. ISDA 2003 Term: Not Bearer  
Either

**fullFaithAndCreditObLiability** (exactly one occurrence; of the type Empty) An obligation and deliverable obligation characteristic. Defined in the ISDA published additional provisions for U.S. Municipal as Reference Entity. ISDA 2003 Term: Full Faith and Credit Obligation Liability

Or

**generalFundObligationLiability** (exactly one occurrence; of the type Empty) An obligation and deliverable obligation characteristic. Defined in the ISDA published additional provisions for U.S. Municipal as Reference Entity. ISDA 2003 Term: General Fund Obligation Liability

Or

**revenueObligationLiability** (exactly one occurrence; of the type Empty) An obligation and deliverable obligation characteristic. Defined in the ISDA published additional provisions for U.S. Municipal as Reference Entity. ISDA 2003 Term: Revenue Obligation Liability

**indirectLoanParticipation** (zero or one occurrence; of the type LoanParticipation) ISDA 1999 Term: Indirect Loan Participation. NOTE: Only applicable as a deliverable obligation under ISDA Credit 1999.

**excluded** (zero or one occurrence; of the type xsd:string) A free format string to specify any excluded obligations or deliverable obligations, as the case may be, of the reference entity or excluded types of obligations or deliverable obligations. ISDA 2003 Term: Excluded Obligations/Excluded Deliverable Obligations

**othReferenceEntityObligations** (zero or one occurrence; of the type xsd:string) This element is used to specify any other obligations of a reference entity in both obligations and deliverable obligations. The obligations can be specified free-form. ISDA 2003 Term: Other Obligations of a Reference Entity

## 1.13 FeeLeg

### 1.13.1 Description:

### 1.13.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type Leg)

- A supertype of leg. All swap legs extend this type.

**initialPayment** (zero or one occurrence; of the type InitialPayment) Specifies a single fixed payment that is payable by the payer to the receiver on the initial payment date. The fixed payment to be paid is specified in terms of a known currency amount. This element should be used for CDS Index trades and can be used for CDS trades where it is necessary to represent a payment from Seller to Buyer. For CDS trades where a payment is to be made from Buyer to Seller the feeLeg/singlePayment structure must be used.

**singlePayment** (zero or more occurrences; of the type SinglePayment) Specifies a single fixed amount that is payable by the buyer to the seller on the fixed rate payer payment date. The fixed amount to be paid is specified in terms of a known currency amount.

**periodicPayment** (zero or one occurrence; of the type PeriodicPayment) Specifies a periodic schedule of fixed amounts that are payable by the buyer to the seller on the fixed rate payer payment dates. The fixed amount to be paid on each payment date can be specified in terms of a known currency amount or as an amount calculated on a formula basis by reference to a per annum fixed rate. The applicable business day convention and business day for adjusting any fixed rate payer payment date if it would otherwise fall on a day that is not a business day are those specified in the dateAdjustments element within the generalTerms component. ISDA 2003 Term:

**marketFixedRate** (zero or one occurrence; of the type xsd:decimal) An optional element that only has meaning in a credit index trade. This element contains the credit spread ("fair value") at which the trade was executed. Unlike the fixedRate of an index, the marketFixedRate varies over the life of the index depending on market conditions. The marketFixedRate is the price of the index as quoted by trading desks.

**paymentDelay** (zero or one occurrence; of the type xsd:boolean) Applicable to CDS on MBS to specify whether payment delays are applicable to the fixed Amount. RMBS typically have a payment delay of 5 days between the coupon date of the reference obligation and the payment date of the synthetic swap. CMBS do not, on the other hand, with both payment dates being on the 25th of each month.

## 1.14 FixedAmountCalculation

### 1.14.1 Description:

### 1.14.2 Contents:

**calculationAmount** (zero or one occurrence; of the type CalculationAmount) The notional amount used in the calculation of fixed amounts where an amount is calculated on a formula basis, i.e. fixed amount = fixed rate payer calculation amount x fixed rate x fixed rate day count fraction. ISDA 2003 Term: Fixed Rate Payer Calculation Amount.

**fixedRate** (exactly one occurrence; of the type FixedRate) The calculation period fixed rate. A per annum rate, expressed as a decimal. A fixed rate of 5% would be represented as 0.05.

**dayCountFraction** (zero or one occurrence; of the type DayCountFraction) The day count fraction. ISDA 2003 Term: Fixed Rate Day Count Fraction.

### 1.14.3 Used by:

- Complex type: PeriodicPayment

## 1.17 FloatingAmountEvents

### 1.17.1 Description:

### 1.17.2 Contents:

**failureToPayPrincipal** (zero or one occurrence; of the type Empty) A floating rate payment event. Corresponds to the failure by the Reference Entity to pay an expected principal amount or the payment of an actual principal amount that is less than the expected principal amount. ISDA 2003 Term: Failure to Pay Principal.

**interestShortfall** (zero or one occurrence; of the type InterestShortFall) A floating rate payment event. With respect to any Reference Obligation Payment Date, either (a) the non-payment of an Expected Interest Amount or (b) the payment of an Actual Interest Amount that is less than the Expected Interest Amount. ISDA 2003 Term: Interest Shortfall.

**writedown** (zero or one occurrence; of the type Empty) A floating rate payment event. Results from the fact that the underlying writes down its outstanding principal amount. ISDA 2003 Term: Writedown.

**floatingAmountProvisions** (zero or one occurrence; of the type FloatingAmountProvisions) Specifies the floating amount provisions associated with the floatingAmountEvents.

**additionalFixedPayments** (zero or one occurrence; of the type AdditionalFixedPayments) Specifies the events that will give rise to the payment a additional fixed payments.

### 1.17.3 Used by:

## 1.18 FloatingAmountProvisions

### 1.18.1 Description:

### 1.18.2 Contents:

**WACapInterestProvision** (zero or one occurrence; of the type Empty) As specified by the ISDA Supplement for use with trades on mortgage-backed securities, "WAC Cap" means a weighted average coupon or weighted average rate cap provision (however defined in the Underlying Instruments) of the Underlying Instruments that limits, increases or decreases the interest rate or interest entitlement, as set out in the Underlying Instruments on the Effective Date without regard to any subsequent amendment The presence of the element signifies that the provision is applicable. From a usage standpoint, this provision is typically applicable in the case of CMBS and not applicable in case of RMBS trades.

**stepUpProvision** (zero or one occurrence; of the type Empty) As specified by the ISDA Standard Terms Supplement for use with trades on mortgage-backed securities. The presence of the element signifies that the provision is applicable. If applicable, the applicable step-up terms are specified as part of that ISDA Standard Terms Supplement. From a usage standpoint, this provision is typically applicable in the case of RMBS and not applicable in case of CMBS trades.

## 1.19 GeneralTerms

### 1.19.1 Description:

### 1.19.2 Contents:

**effectiveDate** (zero or one occurrence; of the type AdjustableDate2) The first day of the term of the trade. This day may be subject to adjustment in accordance with a business day convention. ISDA 2003 Term: Effective Date.

**scheduledTerminationDate** (zero or one occurrence; of the type DeprecatedScheduledTerminationDate) The scheduled date on which the credit protection will lapse. May be specified as an adjusting or non-adjusting date or alternatively as a period offset from the effective date. ISDA 2003 Term: Scheduled Termination Date. The construct has been adjusted as part of the 4.3 release to remove the choice with the relativeDate which was of type Interval. As part of the version5, the intent is to make the scheduleTerminationDate of type AdjustableDate2 and remove the adjustableDate node.

**sellerPartyReference** (exactly one occurrence; of the type PartyOrTradeSideReference) The seller of the credit protection. ISDA 2003 Term: Floating Rate Payer.

**buyerPartyReference** (exactly one occurrence; of the type PartyOrTradeSideReference) The buyer of the credit protection. ISDA 2003 Term: Fixed Rate Payer.

**dateAdjustments** (zero or one occurrence; of the type BusinessDayAdjustments) ISDA 2003 Terms: Business Day and Business Day Convention.

Either

**referenceInformation** (exactly one occurrence; of the type ReferenceInformation) This element contains all the terms relevant to defining the reference entity and reference obligation(s).

Or

**indexReferenceInformation** (exactly one occurrence; of the type IndexReferenceInformation) This element contains all the terms relevant to defining the Credit Default Swap Index.

Or

**basketReferenceInformation** (exactly one occurrence; of the type BasketReferenceInformation) This element contains all the terms relevant to defining the Credit Default Swap Basket.

**additionalTerm** (zero or more occurrences; of the type AdditionalTerm) This element is used for representing information contained in the Additional Terms field of the 2003 Master Credit Derivatives confirm.

**substitution** (zero or one occurrence; of the type Empty) Presence of this element indicates that substitution is applicable.

**modifiedEquityDelivery** (zero or one occurrence; of the type Empty) Presence of this element indicates that modified equity delivery is applicable.

## 1.23 IndexReferenceInformation

### 1.23.1 Description:

A type defining a Credit Default Swap Index.

### 1.23.2 Contents:

**indexSeries** (zero or one occurrence; of the type xsd:positiveInteger) A CDS index series identifier, e.g. 1, 2, 3 etc.

**indexAnnexVersion** (zero or one occurrence; of the type xsd:positiveInteger) A CDS index series version identifier, e.g. 1, 2, 3 etc.

**indexAnnexDate** (zero or one occurrence; of the type xsd:date) A CDS index series annex date.

**indexAnnexSource** (zero or one occurrence; of the type IndexAnnexSource) A CDS index series annex source.

**excludedReferenceEntity** (zero or more occurrences; of the type LegalEntity) Excluded reference entity.

**tranche** (zero or one occurrence; of the type Tranche) This element contains CDS tranche terms.

**settledEntityMatrix** (zero or one occurrence; of the type SettledEntityMatrix) Used to specify the Relevant Settled Entity Matrix when there are settled entities at the time of the trade.

## 1.24 InitialPayment

### 1.24.1 Description:

### 1.24.2 Contents:

**payerPartyReference** (exactly one occurrence; of the type PartyOrAccountReference) A reference to the party responsible for making the payments defined by this structure.

**receiverPartyReference** (exactly one occurrence; of the type PartyOrAccountReference) A reference to the party that receives the payments corresponding to this structure.

**adjustablePaymentDate** (zero or one occurrence; of the type xsd:date) A fixed payment date that shall be subject to adjustment in accordance with the applicable business day convention if it would otherwise fall on a day that is not a business day. The applicable business day convention and business day are those specified in the dateAdjustments element within the generalTerms component.

**adjustedPaymentDate** (zero or one occurrence; of the type xsd:date) The adjusted payment date. This date should already be adjusted for any applicable business day convention. This component is not intended for use in trade confirmation but may be specified to allow the fee structure to also serve as a cashflow type component.

**paymentAmount** (exactly one occurrence; of the type Money) A fixed payment amount.

### 1.24.3 Used by:

## 1.25 InterestShortFall

### 1.25.1 Description:

### 1.25.2 Contents:

**interestShortfallCap** (exactly one occurrence; of the type InterestShortfallCapEnum) Specifies the nature of the interest Shortfall cap (i.e. Fixed Cap or Variable Cap) in the case where it is applicable. ISDA 2003 Term: Interest Shortfall Cap.

**compounding** (exactly one occurrence; of the type xsd:boolean)

**rateSource** (zero or one occurrence; of the type FloatingRateIndex) The rate source in the case of a variable cap.

### 1.25.3 Used by:

</xsd:complexType>
```

## 1.30 Obligations

### 1.30.1 Description:

### 1.30.2 Contents:

**category** (exactly one occurrence; of the type `ObligationCategoryEnum`) Used in both obligations and deliverable obligations to represent a class or type of securities which apply. ISDA 2003 Term: `ObligationCategory/Deliverable Obligation Category`

**notSubordinated** (zero or one occurrence; of the type `Empty`) An obligation and deliverable obligation characteristic. An obligation that ranks at least equal with the most senior Reference Obligation in priority of payment or, if no Reference Obligation is specified in the related Confirmation, the obligations of the Reference Entity that are senior. ISDA 2003 Term: `Not Subordinated`

**specifiedCurrency** (zero or one occurrence; of the type `SpecifiedCurrency`) An obligation and deliverable obligation characteristic. The currency or currencies in which an obligation or deliverable obligation must be payable. ISDA 2003 Term: `Specified Currency`

**notSovereignLender** (zero or one occurrence; of the type `Empty`) An obligation and deliverable obligation characteristic. Any obligation that is not primarily (majority) owed to a Sovereign or Supranational Organization. ISDA 2003 Term: `Not Sovereign Lender`

**notDomesticCurrency** (zero or one occurrence; of the type `NotDomesticCurrency`) An obligation and deliverable obligation characteristic. Any obligation that is payable in any currency other than the domestic currency. Domestic currency is either the currency so specified or, if no currency is specified, the currency of (a) the reference entity, if the reference entity is a sovereign, or (b) the jurisdiction in which the relevant reference entity is organised, if the reference entity is not a sovereign. ISDA 2003 Term: `Not Domestic Currency`

**notDomesticLaw** (zero or one occurrence; of the type `Empty`) An obligation and deliverable obligation characteristic. If the reference entity is a Sovereign, this means any obligation that is not subject to the laws of the reference entity. If the reference entity is not a sovereign, this means any obligation that is not subject to the laws of the jurisdiction of the reference entity. ISDA 2003 Term: `Not Domestic Law`

**listed** (zero or one occurrence; of the type `Empty`) An obligation and deliverable obligation characteristic. Indicates whether or not the obligation is quoted, listed or ordinarily purchased and sold on an exchange. ISDA 2003 Term: `Listed`

**notDomesticIssuance** (zero or one occurrence; of the type `Empty`) An obligation and deliverable obligation characteristic. Any obligation other than an obligation that was intended to be offered for sale primarily in the domestic market of the relevant Reference Entity. This specifies that the obligation must be an internationally recognized bond. ISDA 2003 Term: `Not Domestic Issuance`

Either

**fullFaithAndCreditObLiability** (exactly one occurrence; of the type `Empty`) An obligation and deliverable obligation characteristic. Defined in the ISDA published additional provisions for U.S. Municipal as Reference Entity. ISDA 2003 Term: `Full Faith and Credit Obligation Liability`

Or

**generalFundObligationLiability** (exactly one occurrence; of the type `Empty`) An obligation and deliverable obligation characteristic. Defined in the ISDA published additional provisions for U.S. Municipal as Reference Entity. ISDA 2003 Term: `General Fund Obligation Liability`

Or

**revenueObligationLiability** (exactly one occurrence; of the type `Empty`) An obligation and deliverable obligation characteristic. Defined in the ISDA published additional provisions for U.S. Municipal as Reference Entity. ISDA 2003 Term: `Revenue Obligation Liability`

**notContingent** (zero or one occurrence; of the type `Empty`) NOTE: Only allowed as an obligation characteristic under ISDA Credit 1999. In essence Not Contingent means the repayment of principal cannot be dependant on a formula/index, i.e. to prevent the risk of being delivered an instrument that may never pay any element of principal, and to ensure that the obligation is interest bearing (on a regular schedule). ISDA 2003 Term: `Not Contingent`

**excluded** (zero or one occurrence; of the type `xsd:string`) A free format string to specify any excluded obligations or deliverable obligations, as the case may be, of the reference entity or excluded types of obligations or deliverable obligations. ISDA 2003 Term: `Excluded Obligations/Excluded Deliverable Obligations`

**othReferenceEntityObligations** (zero or one occurrence; of the type xsd:string) This element is used to specify any other obligations of a reference entity in both obligations and deliverable obligations. The obligations can be specified free-form. ISDA 2003 Term: Other Obligations of a Reference Entity

**designatedPriority** (zero or one occurrence; of the type Lien) Applies to Loan CDS, to indicate what lien level is appropriate for a deliverable obligation. Example: a 2nd lien Loan CDS would imply that the deliverable obligations are 1st or 2nd lien loans.

## 1.31 PCDeliverableObligationCharac

### 1.31.1 Description:

### 1.31.2 Contents:

**partialCashSettlement** (zero or one occurrence; of the type Empty) Specifies whether either 'Partial Cash Settlement of Assignable Loans', 'Partial Cash Settlement of Consent Required Loans' or 'Partial Cash Settlement of Participations' is applicable. If this element is specified and Assignable Loan is a Deliverable Obligation Characteristic, any Assignable Loan that is deliverable, but where a non-receipt of Consent by the Physical Settlement Date has occurred, the Loan can be cash settled rather than physically delivered. If this element is specified and Consent Required Loan is a Deliverable Obligation Characteristic, any Consent Required Loan that is deliverable, but where a non-receipt of Consent by the Physical Settlement Date has occurred, the Loan can be cash settled rather than physically delivered. If this element is specified and Direct Loan Participation is a Deliverable Obligation Characteristic, any Participation that is deliverable, but where this participation has not been effected (has not come into effect) by the Physical Settlement Date, the participation can be cash settled rather than physically delivered.

### 1.31.3 Used by:

## 1.32 PeriodicPayment

### 1.32.1 Description:

#### 1.32.2 Contents:

**paymentFrequency** (zero or one occurrence; of the type Interval) The time interval between regular fixed rate payer payment dates.

**firstPeriodStartDate** (zero or one occurrence; of the type xsd:date) The start date of the initial calculation period if such date is not equal to the trade's effective date. It must only be specified if it is not equal to the effective date. The applicable business day convention and business day are those specified in the dateAdjustments element within the generalTerms component (or in a transaction supplement FpML representation defined within the referenced general terms confirmation agreement).

**firstPaymentDate** (zero or one occurrence; of the type xsd:date) The first unadjusted fixed rate payer payment date. The applicable business day convention and business day are those specified in the dateAdjustments element within the generalTerms component (or in a transaction supplement FpML representation defined within the referenced general terms confirmation agreement). ISDA 2003 Term: Fixed Rate Payer Payment Date

**lastRegularPaymentDate** (zero or one occurrence; of the type xsd:date) The last regular unadjusted fixed rate payer payment date. The applicable business day convention and business day are those specified in the dateAdjustments element within the generalTerms component (or in a transaction supplement FpML representation defined within the referenced general terms confirmation agreement). This element should only be included if there is a final payment stub, i.e. where the last regular unadjusted fixed rate payer payment date is not equal to the scheduled termination date. ISDA 2003 Term: Fixed Rate Payer Payment Date

**rollConvention** (zero or one occurrence; of the type RollConventionEnum) Used in conjunction with the effectiveDate, scheduledTerminationDate, firstPaymentDate, lastRegularPaymentDate and paymentFrequency to determine the regular fixed rate payer payment dates.

Either

**fixedAmount** (exactly one occurrence; of the type Money) A fixed payment amount. ISDA 2003 Term: Fixed Amount

Or

**fixedAmountCalculation** (exactly one occurrence; of the type FixedAmountCalculation) This element contains all the terms relevant to calculating a fixed amount where the fixed amount is calculated by reference to a per annum fixed rate. There is no corresponding ISDA 2003 Term. The equivalent is Sec 5.1 "Calculation of Fixed Amount" but this in itself is not a defined Term.

**adjustedPaymentDates** (zero or more occurrences; of the type AdjustedPaymentDates) An optional cashflow-like structure allowing the equivalent representation of the periodic fixed payments in terms of a series of adjusted payment dates and amounts. This is intended to support application integration within an organisation and is not intended for use in inter-firm communication or confirmations. ISDA 2003 Term: Fixed Rate Payer Payment Date

## 1.34 PhysicalSettlementTerms

### 1.34.1 Description:

### 1.34.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type SettlementTerms)

- **physicalSettlementPeriod** (zero or one occurrence; of the type PhysicalSettlementPeriod) The number of business days used in the determination of the physical settlement date. The physical settlement date is this number of business days after all applicable conditions to settlement are satisfied. If a number of business days is not specified fallback provisions apply for determining the number of business days. If Section 8.5/8.6 of the 1999/2003 ISDA Definitions are to apply the businessDaysNotSpecified element should be included. If a specified number of business days are to apply these should be specified in the businessDays element. If Section 8.5/8.6 of the 1999/2003 ISDA Definitions are to apply but capped at a maximum number of business days then the maximum number should be specified in the maximumBusinessDays element. ISDA 2003 Term: Physical Settlement Period

**deliverableObligations** (zero or one occurrence; of the type DeliverableObligations) This element contains all the ISDA terms relevant to defining the deliverable obligations.

**escrow** (zero or one occurrence; of the type xsd:boolean) If this element is specified, indicates that physical settlement must take place through the use of an escrow agent. (For Canadian counterparties this is always "Not Applicable". ISDA 2003 Term: Escrow

**sixtyBusinessDaySettlementCap** (zero or one occurrence; of the type xsd:boolean) If this element is specified, for a transaction documented under the 2003 ISDA Credit Derivatives Definitions, has the effect of incorporating the language set forth below into the confirmation. The section references are to the 2003 ISDA Credit Derivatives Definitions. Notwithstanding Section 1.7 or any provisions of Sections 9.9 or 9.10 to the contrary, but without prejudice to Section 9.3 and (where applicable) Sections 9.4, 9.5 and 9.6, if the Termination Date has not occurred on or prior to the date that is 60 Business Days following the Physical Settlement Date, such 60th Business Day shall be deemed to be the Termination Date with respect to this Transaction except in relation to any portion of the Transaction (an "Affected Portion") in respect of which: (1) a valid notice of Buy-in Price has been delivered that is effective fewer than three Business Days prior to such 60th Business Day, in which case the Termination Date for that Affected Portion shall be the third Business Day following the date on which such notice is effective; or (2) Buyer has purchased but not Delivered Deliverable Obligations validly specified by Seller pursuant to Section 9.10(b), in which case the Termination Date for that Affected Portion shall be the tenth Business Day following the date on which Seller validly specified such Deliverable Obligations to Buyer.

### 1.34.3 Used by:

## 1.35 ProtectionTerms

### 1.35.1 Description:

### 1.35.2 Contents:

**calculationAmount** (exactly one occurrence; of the type Money) The notional amount of protection coverage. ISDA 2003 Term: Floating Rate Payer Calculation Amount

**creditEvents** (zero or one occurrence; of the type CreditEvents) This element contains all the ISDA terms relating to credit events.

**obligations** (zero or one occurrence; of the type Obligations) The underlying obligations of the reference entity on which you are buying or selling protection. The credit events Failure to Pay, Obligation Acceleration, Obligation Default, Restructuring, Repudiation/Moratorium are defined with respect to these obligations. ISDA 2003 Term:

**floatingAmountEvents** (zero or one occurrence; of the type FloatingAmountEvents) This element contains the ISDA terms relating to the floating rate payment events and the implied additional fixed payments, applicable to the credit derivatives transactions on mortgage-backed securities with pay-as-you-go or physical settlement.

## 1.37 ReferenceInformation

### 1.37.1 Description:

### 1.37.2 Contents:

**referenceEntity** (exactly one occurrence; of the type LegalEntity) The corporate or sovereign entity on which you are buying or selling protection and any successor that assumes all or substantially all of its contractual and other obligations. It is vital to use the correct legal name of the entity and to be careful not to choose a subsidiary if you really want to trade protection on a parent company. Please note, Reference Entities cannot be senior or subordinated. It is the obligations of the Reference Entities that can be senior or subordinated. ISDA 2003 Term: Reference Entity

Either

**referenceObligation** (one or more occurrences; of the type ReferenceObligation) The Reference Obligation is a financial instrument that is either issued or guaranteed by the reference entity. It serves to clarify the precise reference entity protection is being offered upon, and its legal position with regard to other related firms (parents/subsidiaries). Furthermore the Reference Obligation is ALWAYS deliverable and establishes the Pari Passu ranking (as the deliverable bonds must rank equal to the reference obligation). ISDA 2003 Term: Reference Obligation

Or

**noReferenceObligation** (exactly one occurrence; of the type Empty) Used to indicate that there is no Reference Obligation associated with this Credit Default Swap and that there will never be one.

Or

**unknownReferenceObligation** (exactly one occurrence; of the type Empty) Used to indicate that the Reference obligation associated with the Credit Default Swap is currently not known. This is not valid for Legal Confirmation purposes, but is valid for earlier stages in the trade life cycle (e.g. Broker Confirmation).

**allGuarantees** (zero or one occurrence; of the type xsd:boolean) Indicates whether an obligation of the Reference Entity, guaranteed by the Reference Entity on behalf of a non-Affiliate, is to be considered an Obligation for the purpose of the transaction. It will be considered an obligation if allGuarantees is applicable (true) and not if allGuarantees is inapplicable (false). ISDA 2003 Term: All Guarantees

**referencePrice** (zero or one occurrence; of the type xsd:decimal) Used to determine (a) for physically settled trades, the Physical Settlement Amount, which equals the Floating Rate Payer Calculation Amount times the Reference Price and (b) for cash settled trades, the Cash Settlement Amount, which equals the greater of (i) the difference between the Reference Price and the Final Price and (ii) zero. ISDA 2003 Term: Reference Price

**referencePolicy** (zero or one occurrence; of the type Empty) Applicable to the transactions on mortgage-backed security, which can make use of a reference policy. Presence of the element indicates that the reference policy is applicable; absence implies that it is not.

**securedList** (zero or one occurrence; of the type xsd:boolean) With respect to any day, the list of Syndicated Secured Obligations of the Designated Priority of the Reference Entity published by Markit Group Limited or any successor thereto appointed by the Specified Dealers (the "Secured List Publisher") on or most recently before such day, which list is currently available at [<http://www.markit.com>]. ISDA 2003 Term: Relevant Secured List.

## 1.38 ReferenceObligation

### 1.38.1 Description:

### 1.38.2 Contents:

Either

**bond** (exactly one occurrence; of the type Bond) Defines the underlying asset when it is a bond.

Or

**convertibleBond** (exactly one occurrence; of the type ConvertibleBond) Defines the underlying asset when it is a convertible bond.

Or

**mortgage** (exactly one occurrence; of the type Mortgage) Defines an underlying asset that is a mortgage.

Or

**loan** (exactly one occurrence; of the type Loan) Defines a simple underlying asset that is a loan.

Either

**primaryObligor** (exactly one occurrence; of the type LegalEntity) The entity primarily responsible for repaying debt to a creditor as a result of borrowing or issuing bonds. ISDA 2003 Term: Primary Obligor

Or

**primaryObligorReference** (exactly one occurrence; of the type LegalEntityReference) A pointer style reference to a reference entity defined elsewhere in the document. Used when the reference entity is the primary obligor.

Either

**guarantor** (exactly one occurrence; of the type LegalEntity) The party that guarantees by way of a contractual arrangement to pay the debts of an obligor if the obligor is unable to make the required payments itself. ISDA 2003 Term: Guarantor

Or

**guarantorReference** (exactly one occurrence; of the type LegalEntityReference) A pointer style reference to a reference entity defined elsewhere in the document. Used when the reference entity is the guarantor.

## 1.39 ReferencePair

### 1.39.1 Description:

### 1.39.2 Contents:

**referenceEntity** (exactly one occurrence; of the type LegalEntity) The corporate or sovereign entity on which you are buying or selling protection and any successor that assumes all or substantially all of its contractual and other obligations. It is vital to use the correct legal name of the entity and to be careful not to choose a subsidiary if you really want to trade protection on a parent company. Please note, Reference Entities cannot be senior or subordinated. It is the obligations of the Reference Entities that can be senior or subordinated. ISDA 2003 Term: Reference Entity

Either

**referenceObligation** (exactly one occurrence; of the type ReferenceObligation) The Reference Obligation is a financial instrument that is either issued or guaranteed by the reference entity. It serves to clarify the precise reference entity protection is being offered upon, and its legal position with regard to other related firms (parents/subsidiaries). Furthermore the Reference Obligation is ALWAYS deliverable and establishes the Pari Passu ranking (as the deliverable bonds must rank equal to the reference obligation). ISDA 2003 Term: Reference Obligation

Or

**noReferenceObligation** (exactly one occurrence; of the type Empty) Used to indicate that there is no Reference Obligation associated with this Credit Default Swap and that there will never be one.

**entityType** (exactly one occurrence; of the type EntityType) Defines the reference entity types corresponding to a list of types in the ISDA First to Default documentation.

### 1.39.3 Used by:

  </xsd:sequence>
</xsd:complexType>
```

## 1.41 ReferencePoolItem

### 1.41.1 Description:

This type contains all the constituent weight and reference information.

### 1.41.2 Contents:

**constituentWeight** (zero or one occurrence; of the type `ConstituentWeight`) Describes the weight of each of the constituents within the basket. If not provided, it is assumed to be equal weighted.

**referencePair** (exactly one occurrence; of the type `ReferencePair`)

**protectionTermsReference** (zero or one occurrence; of the type `ProtectionTermsReference`) Reference to the documentation terms applicable to this item.

**settlementTermsReference** (zero or one occurrence; of the type `SettlementTermsReference`) Reference to the settlement terms applicable to this item.

### 1.41.3 Used by:

- Complex type: `ReferencePool`

### 1.41.4 Derived Types:

### 1.41.5 Figure:

### 1.41.6 Schema Fragment:

  </xsd:complexContent>
</xsd:complexType>
```

## 1.46 SinglePayment

### 1.46.1 Description:

### 1.46.2 Contents:

**adjustablePaymentDate** (exactly one occurrence; of the type xsd:date) A fixed amount payment date that shall be subject to adjustment in accordance with the applicable business day convention if it would otherwise fall on a day that is not a business day. The applicable business day convention and business day are those specified in the dateAdjustments element within the generalTerms component. ISDA 2003 Term: Fixed Rate Payer Payment Date

**adjustedPaymentDate** (zero or one occurrence; of the type xsd:date) The adjusted payment date. This date should already be adjusted for any applicable business day convention. This component is not intended for use in trade confirmation but may be specified to allow the fee structure to also serve as a cashflow type component.

**fixedAmount** (exactly one occurrence; of the type Money) A fixed payment amount. ISDA 2003 Term: Fixed Amount

### 1.46.3 Used by:

- Complex type: FeeLeg

### 1.46.4 Derived Types:

### 1.46.5 Figure:

### 1.46.6 Schema Fragment:

        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
  </xsd:sequence>
</xsd:complexType>
```

## 1.49 Tranche

### 1.49.1 Description:

This type represents a CDS Tranche.

### 1.49.2 Contents:

**attachmentPoint** (exactly one occurrence; of the type xsd:decimal) Lower bound percentage of the loss that the Tranche can endure, expressed as a decimal. An attachment point of 5% would be represented as 0.05. The difference between Attachment and Exhaustion points is call the width of the Tranche. A schema facet to constraint the value between 0 to 1 will be introduced in FpML 4.3.

**exhaustionPoint** (exactly one occurrence; of the type xsd:decimal) Upper bound percentage of the loss that the Tranche can endure, expressed as a decimal. An exhaustion point of 5% would be represented as 0.05. The difference between Attachment and Exhaustion points is call the width of the Tranche. A schema facet to constraint the value between 0 to 1 will be introduced in FpML 4.3.

**incurredRecoveryApplicable** (zero or one occurrence; of the type xsd:boolean) Outstanding Swap Notional Amount is defined at any time on any day, as the greater of: (a) Zero; If Incurred Recovery Amount Applicable: (b) The Original Swap Notional Amount minus the sum of all Incurred Loss Amounts and all Incurred Recovery Amounts (if any) determined under this Confirmation at or prior to such time. Incurred Recovery Amount not populated: (b) The Original Swap Notional Amount minus the sum of all Incurred Loss Amounts determined under this Confirmation at or prior to such time.

### 1.49.3 Used by:

## 1.50 ValuationDate

### 1.50.1 Description:

### 1.50.2 Contents:

Either

**singleValuationDate** (exactly one occurrence; of the type SingleValuationDate) Where single valuation date is specified as being applicable for cash settlement, this element specifies the number of business days after satisfaction of all conditions to settlement when such valuation date occurs. ISDA 2003 Term: Single Valuation Date

Or

**multipleValuationDates** (exactly one occurrence; of the type MultipleValuationDates) Where multiple valuation dates are specified as being applicable for cash settlement, this element specifies (a) the number of applicable valuation dates, and (b) the number of business days after satisfaction of all conditions to settlement when the first such valuation date occurs, and (c) the number of business days thereafter of each successive valuation date. ISDA 2003 Term: Multiple Valuation Dates

### 1.50.3 Used by:

- Complex type: CashSettlementTerms

## ***2 Global Elements***

## 2.1 creditDefaultSwap

### 2.1.1 Description:

In a credit default swap one party (the protection seller) agrees to compensate another party (the protection buyer) if a specified company or Sovereign (the reference entity) experiences a credit event, indicating it is or may be unable to service its debts. The protection seller is typically paid a fee and/or premium, expressed as an annualized percent of the notional in basis points, regularly over the life of the transaction or otherwise as agreed by the parties.

### 2.1.2 Contents:

Element creditDefaultSwap is defined by the complex type CreditDefaultSwap

### 2.1.3 Used by:

- Complex type: CreditDefaultSwapOption

### 2.1.4 Substituted by:

### 2.1.5 Figure:

# ***1 Global Complex Types***

## 1.1 CorrelationAmount

### 1.1.1 Description:

Correlation Amount.

### 1.1.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type CalculatedAmount)

- An abstract base class for all calculated money amounts, which are in the currency of the cash multiplier of the calculation.

**correlation** (exactly one occurrence; of the type Correlation) Specifies Correlation.

### 1.1.3 Used by:

- Complex type: CorrelationLeg

### 1.1.4 Derived Types:

### 1.1.5 Figure:

### 1.1.6 Schema Fragment:

```
<xsd:complexType name="CorrelationAmount">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      Correlation Amount.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:complexContent>
    <xsd:extension base="CalculatedAmount">
      <xsd:sequence>
        <xsd:element name="correlation" type="Correlation">
          <xsd:annotation>
            <xsd:documentation xml:lang="en">
              Specifies Correlation.
            </xsd:documentation>
          </xsd:annotation>
        </xsd:element>
      </xsd:sequence>
    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

## 1.2 CorrelationLeg

### 1.2.1 Description:

A type describing return which is driven by a Correlation calculation.

### 1.2.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type DirectionalLegUnderlyerValuation)

- An abstract base class for all directional leg types with effective date, termination date, and underlyer, where a payer makes a stream of payments of greater than zero value to a receiver.

**amount** (exactly one occurrence; of the type CorrelationAmount) Specifies, in relation to each Equity Payment Date, the Equity Amount to which the Equity Payment Date relates. Unless otherwise specified, this term has the meaning defined in the ISDA 2002 Equity Derivatives Definitions.

### 1.2.3 Used by:

- Complex type: CorrelationSwap

### 1.2.4 Derived Types:

### 1.2.5 Figure:

### 1.2.6 Schema Fragment:

```
<xsd:complexType name="CorrelationLeg">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A type describing return which is driven by a Correlation
      calculation.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:complexContent>
    <xsd:extension base="DirectionalLegUnderlyerValuation">
      <xsd:sequence>
        <xsd:element name="amount" type="CorrelationAmount">
          <xsd:annotation>
            <xsd:documentation xml:lang="en">
              Specifies, in relation to each Equity Payment Date, the
              Equity Amount to which the Equity Payment Date relates.
              Unless otherwise specified, this term has the meaning
              defined in the ISDA 2002 Equity Derivatives Definitions.
            </xsd:documentation>
          </xsd:annotation>
        </xsd:element>
      </xsd:sequence>
    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

## 1.3 CorrelationSwap

### 1.3.1 Description:

A Correlation Swap modelled using a single netted leg.

### 1.3.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type NettedSwapBase)

- An abstract base class for all swap types which have a single netted leg, such as Variance Swaps, and Correlation Swaps.

**correlationLeg** (exactly one occurrence; of the type CorrelationLeg) Correlation Leg. Correlation Buyer is deemed to be the Equity Amount Receiver, Correlation Seller is deemed to be the Equity Amount Payer.

### 1.3.3 Used by:

- Element: correlationSwap
- Complex type: CorrelationSwapOption

### 1.3.4 Derived Types:

### 1.3.5 Figure:

### 1.3.6 Schema Fragment:

```
<xsd:complexType name="CorrelationSwap">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A Correlation Swap modelled using a single netted leg.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:complexContent>
    <xsd:extension base="NettedSwapBase">
      <xsd:sequence>
        <xsd:element name="correlationLeg" type="CorrelationLeg">
          <xsd:annotation>
            <xsd:documentation xml:lang="en">
              Correlation Leg. Correlation Buyer is deemed to be the
              Equity Amount Receiver, Correlation Seller is deemed to
              be the Equity Amount Payer.
            </xsd:documentation>
          </xsd:annotation>
        </xsd:element>
      </xsd:sequence>
    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

## 1.4 CorrelationSwapOption

### 1.4.1 Description:

An Option on a Correlation Swap.

### 1.4.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type OptionBaseExtended)

- Base type for options starting with the 4-3 release, until we refactor the schema as part of the 5-0 release series

**strike** (exactly one occurrence; of the type OptionNumericStrike) Strike of the the Correlation Swap Option.

**correlationSwap** (exactly one occurrence; of the type CorrelationSwap) Correlation Swap which is the underlyer of this Option.

### 1.4.3 Used by:

- Element: correlationSwapOption

### 1.4.4 Derived Types:

### 1.4.5 Figure:

### 1.4.6 Schema Fragment:

```
<xsd:complexType name="CorrelationSwapOption">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      An Option on a Correlation Swap.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:complexContent>
    <xsd:extension base="OptionBaseExtended">
      <xsd:sequence>
        <xsd:element name="strike" type="OptionNumericStrike">
          <xsd:annotation>
            <xsd:documentation xml:lang="en">
              Strike of the the Correlation Swap Option.
            </xsd:documentation>
          </xsd:annotation>
        </xsd:element>
        <xsd:element name="correlationSwap" type="CorrelationSwap">
          <xsd:annotation>
            <xsd:documentation xml:lang="en">
              Correlation Swap which is the underlyer of this Option.
            </xsd:documentation>
          </xsd:annotation>
        </xsd:element>
      </xsd:sequence>
    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

## ***2 Global Elements***

## **2.1 correlationSwap**

### **2.1.1 Description:**

Specifies the structure of a correlation swap.

### **2.1.2 Contents:**

Element correlationSwap is defined by the complex type CorrelationSwap

### **2.1.3 Used by:**

### **2.1.4 Substituted by:**

### **2.1.5 Figure:**

### **2.1.6 Schema Fragment:**

```
<xsd:element name="correlationSwap" type="CorrelationSwap" substitutionGroup="product">

# ***1 Global Complex Types***

## 1.1 DividendLeg

### 1.1.1 Description:

Floating Payment Leg of a Dividend Swap.

### 1.1.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type DirectionalLegUnderlyer)

- An abstract base class for all directional leg types with effective date, termination date, and underlyer where a payer makes a stream of payments of greater than zero value to a receiver.

**declaredCashDividendPercentage** (exactly one occurrence; of the type NonNegativeDecimal) Declared Cash Dividend Percentage.

**declaredCashEquivalentDividendPercentage** (exactly one occurrence; of the type NonNegativeDecimal) Declared Cash Equivalent Dividend Percentage.

**dividendPeriod** (one or more occurrences; of the type DividendPeriodPayment) One to many time bounded dividend payment periods, each with a fixed strike and dividend payment date per period.

### 1.1.3 Used by:

- Complex type: DividendSwapTransactionSupplement

### 1.1.4 Derived Types:

### 1.1.5 Figure:

### 1.1.6 Schema Fragment:

```
<xsd:complexType name="DividendLeg">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      Floating Payment Leg of a Dividend Swap.
    </xsd:documentation>

        <xsd:element name="declaredCashDividendPercentage" type="NonNegativeDecimal">
          <xsd:annotation>
            <xsd:documentation xml:lang="en">
              Declared Cash Dividend Percentage.
            </xsd:documentation>
          </xsd:annotation>
        </xsd:element>
        <xsd:element name="declaredCashEquivalentDividendPercentage" type="NonNegativeDecimal">
          <xsd:annotation>
            <xsd:documentation xml:lang="en">
              Declared Cash Equivalent Dividend Percentage.
            </xsd:documentation>
          </xsd:annotation>
        </xsd:element>
        <xsd:element name="dividendPeriod" type="DividendPeriodPayment" maxOccurs="unbounded">
          <xsd:annotation>
            <xsd:documentation xml:lang="en">
              One to many time bounded dividend payment periods, each
              with a fixed strike and dividend payment date per period.
            </xsd:documentation>
          </xsd:annotation>
        </xsd:element>
      </xsd:sequence>
    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

## 1.2 DividendPeriodPayment

### 1.2.1 Description:

A time bounded dividend period, with fixed strike and a dividend payment date per period.

### 1.2.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type DividendPeriod)

- Abstract base class of all time bounded dividend period types.

**fixedStrike** (exactly one occurrence; of the type PositiveDecimal) Fixed strike.

**paymentDate** (exactly one occurrence; of the type AdjustableOrRelativeDate) Dividend period amount payment date.

### 1.2.3 Used by:

- Complex type: DividendLeg

### 1.2.4 Derived Types:

### 1.2.5 Figure:

### 1.2.6 Schema Fragment:

</xsd:complexType>
```

## 1.3 DividendSwapTransactionSupplement

### 1.3.1 Description:

A Dividend Swap Transaction Supplement.

### 1.3.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type Product)

- The base type which all FpML products extend.

**dividendLeg** (exactly one occurrence; of the type DividendLeg) Dividend leg.

**fixedLeg** (exactly one occurrence; of the type FixedPaymentLeg) Fixed payment leg.

### 1.3.3 Used by:

- Element: dividendSwapTransactionSupplement
- Complex type: DividendSwapTransactionSupplementOption

### 1.3.4 Derived Types:

### 1.3.5 Figure:

### 1.3.6 Schema Fragment:

## 1.4 DividendSwapTransactionSupplementOption

### 1.4.1 Description:

An Option on a Dividend Swap Transaction Supplement.

### 1.4.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type OptionBaseExtended)

- Base type for options starting with the 4-3 release, until we refactor the schema as part of the 5-0 release series

**strike** (exactly one occurrence; of the type OptionStrike) Strike of the Dividend Swap Transaction Supplement.

**dividendSwapTransactionSupplement** (exactly one occurrence; of the type DividendSwapTransactionSupplement) Dividend Swap Transaction Supplement which is the underlyer of this Option.

### 1.4.3 Used by:

- Element: dividendSwapTransactionSupplementOption

### 1.4.4 Derived Types:

### 1.4.5 Figure:

### 1.4.6 Schema Fragment:

```
<xsd:complexType name="DividendSwapTransactionSupplementOption">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      An Option on a Dividend Swap Transaction Supplement.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:complexContent>

        <xsd:element name="strike" type="OptionStrike">
          <xsd:annotation>
            <xsd:documentation xml:lang="en">
              Strike of the Dividend Swap Transaction Supplement.
            </xsd:documentation>
          </xsd:annotation>
        </xsd:element>
        <xsd:element name="dividendSwapTransactionSupplement" type="DividendSwapTransactionSupp
          <xsd:annotation>
            <xsd:documentation xml:lang="en">
              Dividend Swap Transaction Supplement which is the
              underlyer of this Option.
            </xsd:documentation>
          </xsd:annotation>
        </xsd:element>
      </xsd:sequence>
    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

## 1.5 FixedPaymentAmount

### 1.5.1 Description:

Fixed payment amount within a Dividend Swap.

### 1.5.2 Contents:

**paymentAmount** (zero or one occurrence; of the type Money) Payment amount, which is optional since the payment amount may be calculated using fixed strike and number of open units.

**paymentDate** (exactly one occurrence; of the type RelativeDateOffset) Payment date relative to another date.

### 1.5.3 Used by:

- Complex type: FixedPaymentLeg

### 1.5.4 Derived Types:

### 1.5.5 Figure:

### 1.5.6 Schema Fragment:

```
<xsd:complexType name="FixedPaymentAmount">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      Fixed payment amount within a Dividend Swap.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:sequence>
    <xsd:element name="paymentAmount" type="Money" minOccurs="0">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">

      </xsd:annotation>
    </xsd:element>
  </xsd:sequence>
</xsd:complexType>
```

## 1.6 FixedPaymentLeg

### 1.6.1 Description:

Fixed Payment Leg of a Dividend Swap.

### 1.6.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type DirectionalLeg)

- An abstract base class for all directional leg types with effective date, termination date, where a payer makes a stream of payments of greater than zero value to a receiver.

**fixedPayment** (one or more occurrences; of the type FixedPaymentAmount) Fixed payment of a dividend swap, payment date is relative to a dividend period payment date. Commonly the dividend leg and the fixed payment leg will pay out on the same date, and the payments will be netted.

### 1.6.3 Used by:

- Complex type: DividendSwapTransactionSupplement

### 1.6.4 Derived Types:

### 1.6.5 Figure:

### 1.6.6 Schema Fragment:

```
<xsd:complexType name="FixedPaymentLeg">
  <xsd:annotation>

## ***1 Global Simple Types***

## 1.1 QueryParameterValue

### 1.1.1 Description:

A type representing a value corresponding to an identifier for a parameter describing a query portfolio.

### 1.1.2 Contents:

Inherited element(s): (This definition restricts the content defined by the type xsd:string)

### 1.1.3 Used by:

### 1.1.4 Derived Types:

### 1.1.5 Schema Fragment:

```
<xsd:simpleType name="QueryParameterValue">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A type representing a value corresponding to an identifier for a
      parameter describing a query portfolio.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:restriction base="xsd:string"/>
</xsd:simpleType>
```

## ***2 Global Complex Types***

## 2.1 Allocation

### 2.1.1 Description:

#### 2.1.2 Contents:

**allocationTradeId** (exactly one occurrence; of the type PartyTradeIdentifier) Unique ID for the allocation.  
Either

**accountReference** (exactly one occurrence; of the type AccountReference) Reference to the subaccount definition in the Party list.

Or

**partyReference** (exactly one occurrence; of the type PartyReference) Reference to the party definition.

Either

**allocatedFraction** (exactly one occurrence; of the type xsd:decimal) The fractional allocation (0.45 = 45%) of the notional and "block" fees to this particular client subaccount.

Or

**allocatedNotional** (exactly one occurrence; of the type Money) The notional allocation (amount and currency) to this particular client account.

**collateral** (zero or one occurrence; of the type Collateral) The sum that must be posted upfront to collateralize against counterparty credit risk.

**creditChargeAmount** (zero or one occurrence; of the type Money) Special credit fee assessed to certain institutions.

**approvals** (zero or one occurrence; of the type Approvals) A container for approval states in the workflow.

**masterConfirmationDate** (zero or one occurrence; of the type xsd:date) The date of the confirmation executed between the parties and intended to govern the allocated trade between those parties.

#### 2.1.3 Used by:

- Complex type: Allocations

#### 2.1.4 Derived Types:

#### 2.1.5 Figure:

#### 2.1.6 Schema Fragment:

```
<xsd:complexType name="Allocation">
  <xsd:sequence>
    <xsd:element name="allocationTradeId" type="PartyTradeIdentifier">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          Unique ID for the allocation.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
    <xsd:group ref="AccountReferenceOrPartyReference.model"/>

      <xsd:element name="allocatedFraction" type="xsd:decimal">
        <xsd:annotation>
          <xsd:documentation xml:lang="en">
            The fractional allocation (0.45 = 45%) of the notional and
            "block" fees to this particular client subaccount.
          </xsd:documentation>
        </xsd:annotation>
      </xsd:element>
      <xsd:element name="allocatedNotional" type="Money">
        <xsd:annotation>
          <xsd:documentation xml:lang="en">
            The notional allocation (amount and currency) to this
            particular client account.
          </xsd:documentation>
        </xsd:annotation>
      </xsd:element>
    </xsd:choice>
  </xsd:sequence>
</complexType>
```

```
<xsd:group ref="AllocationContent.model" />  
</xsd:sequence>  
</xsd:complexType>
```

## 2.2 Allocations

### 2.2.1 Description:

### 2.2.2 Contents:

**allocation** (one or more occurrences; of the type Allocation)

### 2.2.3 Used by:

- Complex type: RequestAllocation
- Complex type: Trade

### 2.2.4 Derived Types:

### 2.2.5 Figure:

### 2.2.6 Schema Fragment:

```
<xsd:complexType name="Allocations">  
  <xsd:sequence>  
    <xsd:element name="allocation" type="Allocation" maxOccurs="unbounded"/>  
  </xsd:sequence>  
</xsd:complexType>
```

## 2.3 AllocationTradeIdentifier

### 2.3.1 Description:

This type is used to identify that a trade id is referring to a block trade.

### 2.3.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type PartyTradeIdentifier)

- A type defining one or more trade identifiers allocated to the trade by a party. A link identifier allows the trade to be associated with other related trades, e.g. trades forming part of a larger structured transaction. It is expected that for external communication of trade there will be only one tradeId sent in the document per party.

**blockTradeId** (zero or one occurrence; of the type PartyTradeIdentifier) The trade id of the block trade. This is used by each one of the allocated trades to reference the block trade.

### 2.3.3 Used by:

### 2.3.4 Derived Types:

### 2.3.5 Figure:

### 2.3.6 Schema Fragment:

```
<xsd:complexType name="AllocationTradeIdentifier">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      This type is used to identify that a trade id is referring to a
      block trade.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:complexContent>
    <xsd:extension base="PartyTradeIdentifier">
      <xsd:sequence>
        <xsd:element name="blockTradeId" type="PartyTradeIdentifier" minOccurs="0">
          <xsd:annotation>
            <xsd:documentation xml:lang="en">
              The trade id of the block trade. This is used by each one
              of the allocated trades to reference the block trade.
            </xsd:documentation>
          </xsd:annotation>
        </xsd:element>
      </xsd:sequence>
    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

## 2.4 Amendment

### 2.4.1 Description:

An event type that defines the content of an Amendment transaction.

### 2.4.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type Event)

- A type defining the basic structure of FpML business events; it is refined by its derived types.

**trade** (exactly one occurrence; of the type Trade)

**amendmentTradeDate** (exactly one occurrence; of the type xsd:date) The date on which the the parties enter into the Amendment transaction

**amendmentEffectiveDate** (exactly one occurrence; of the type xsd:date) The date on which the Amendment becomes effective

**payment** (zero or one occurrence; of the type Payment) A payment for the right to amend the trade.

### 2.4.3 Used by:

- Complex type: AmendmentConfirmed
- Complex type: RequestAmendmentConfirmation
- Complex type: TradeAmendmentRequest
- Complex type: TradeAmendmentResponse

### 2.4.4 Derived Types:

### 2.4.5 Figure:

### 2.4.6 Schema Fragment:

```
<xsd:complexType name="Amendment">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      An event type that defines the content of an Amendment
      transaction.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:complexContent>
    <xsd:extension base="Event">
      <xsd:sequence>
        <xsd:element name="trade" type="Trade"/>
        <xsd:group ref="AmendmentDetails.model"/>
        <xsd:element name="payment" type="Payment" minOccurs="0">
          <xsd:annotation>
            <xsd:documentation xml:lang="en">
              A payment for the right to amend the trade.
            </xsd:documentation>
          </xsd:annotation>
        </xsd:element>
      </xsd:sequence>
    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

## 2.5 Approval

### 2.5.1 Description:

A specific approval state in the workflow.

### 2.5.2 Contents:

**type** (exactly one occurrence; of the type xsd:normalizedString) The type of approval (e.g. "Credit").

**status** (exactly one occurrence; of the type xsd:normalizedString) The current state of approval (.e.g preapproved, pending approval, etc.)

**approver** (zero or one occurrence; of the type xsd:normalizedString) The full name or identifying ID of the relevant approver.

### 2.5.3 Used by:

- Complex type: Approvals

### 2.5.4 Derived Types:

### 2.5.5 Figure:

### 2.5.6 Schema Fragment:

```
<xsd:complexType name="Approval">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A specific approval state in the workflow.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:sequence>
    <xsd:element name="type" type="xsd:normalizedString">
      <xsd:annotation>

<xsd:complexType name="Approvals">  
  <xsd:sequence>  
    <xsd:element name="approval" type="Approval" maxOccurs="unbounded"/>  
  </xsd:sequence>  
</xsd:complexType>
```

## 2.7 BestFitTrade

### 2.7.1 Description:

A type used to record the differences between the current trade and another indicated trade.

### 2.7.2 Contents:

**tradeIdentifier** (exactly one occurrence; of the type TradeIdentifier) The identifier for the trade compared against.

**differences** (zero or more occurrences; of the type TradeDifference) An optional set of detailed difference records.

### 2.7.3 Used by:

- Complex type: TradeMismatched

### 2.7.4 Derived Types:

### 2.7.5 Figure:

### 2.7.6 Schema Fragment:

```
<xsd:complexType name="BestFitTrade">
  <xsd:annotation>

        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
  </xsd:sequence>
</xsd:complexType>
```

## 2.8 BlockTradeIdentifier

### 2.8.1 Description:

This type is used to identify that a trade id is referring to a block trade.

### 2.8.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type PartyTradeIdentifier)

- A type defining one or more trade identifiers allocated to the trade by a party. A link identifier allows the trade to be associated with other related trades, e.g. trades forming part of a larger structured transaction. It is expected that for external communication of trade there will be only one tradeId sent in the document per party.

**allocationTradeId** (zero or more occurrences; of the type PartyTradeIdentifier) The trade id of the allocated trade. This is used by the block trade to reference the allocated trade.

**blockTradeId** (zero or one occurrence; of the type PartyTradeIdentifier) The trade id of the parent trade for N-level allocations. This element is only used to model N-level allocations in which the trade acts as block and allocated trade at the same time. This basically means the ability to allocate a block trade to multiple allocation trades, and then allocate these in turn to other allocation trades (and so on if desired).

### 2.8.3 Used by:

- Complex type: RequestAllocation

### 2.8.4 Derived Types:

### 2.8.5 Figure:

### 2.8.6 Schema Fragment:

```
<xsd:complexType name="BlockTradeIdentifier">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      This type is used to identify that a trade id is referring to a
      block trade.

  <xsd:complexContent>
    <xsd:extension base="PartyTradeIdentifier">
      <xsd:sequence>
        <xsd:element name="allocationTradeId" type="PartyTradeIdentifier" minOccurs="0" maxOccurs="1">
          <xsd:annotation>
            <xsd:documentation xml:lang="en">
              The trade id of the allocated trade. This is used by the
              block trade to reference the allocated trade.
            </xsd:documentation>
          </xsd:annotation>
        </xsd:element>
        <xsd:element name="blockTradeId" type="PartyTradeIdentifier" minOccurs="0">
          <xsd:annotation>
            <xsd:documentation xml:lang="en">
              The trade id of the parent trade for N-level allocations.
              This element is only used to model N-level allocations in
              which the trade acts as block and allocated trade at the
              same time. This basically means the ability to allocate a
              block trade to multiple allocation trades, and then
              allocate these in turn to other allocation trades (and so
              on if desired).
            </xsd:documentation>
          </xsd:annotation>
        </xsd:element>
      </xsd:sequence>
    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

## 2.9 ChangeContract

### 2.9.1 Description:

Abstract base class for changes to a Contract.

### 2.9.2 Contents:

**contractReference** (exactly one occurrence; of the type ContractReference) Identification of the Contract which is subject to change.

**date** (exactly one occurrence; of the type xsd:date) The date on which the the parties enter into the change.

**effectiveDate** (exactly one occurrence; of the type xsd:date) The date on which the change becomes effective.

**payment** (zero or one occurrence; of the type Payment) Payment for the right to change the Contract.

### 2.9.3 Used by:

- Complex type: ChangeContractSize
- Complex type: ContractTermination

### 2.9.4 Derived Types:

- Complex type: ChangeContractSize
- Complex type: ContractTermination

### 2.9.5 Figure:

```

## 2.11 Collateral

### 2.11.1 Description:

A type for defining the obligations of the counterparty subject to credit support requirements

### 2.11.2 Contents:

**independentAmount** (exactly one occurrence; of the type IndependentAmount) Independent Amount is an amount that usually less creditworthy counterparties are asked to provide. It can either be a fixed amount or a percentage of the Transaction's value. The Independent Amount can be: (i) transferred before any trading between the parties occurs (as a deposit at a third party's account or with the counterparty) or (ii) callable after trading has occurred (typically because a downgrade has occurred). In situation (i), the Independent Amount is not included in the calculation of Exposure, but in situation (ii), it is included in the calculation of Exposure. Thus, for situation (ii), the Independent Amount may be transferred along with any collateral call. Independent Amount is a defined term in the ISDA Credit Support Annex. ("with respect to a party, the amount specified as such for that party in Paragraph 13; if no amount is specified, zero")

### 2.11.3 Used by:

- Complex type: Contract
- Complex type: Trade

### 2.11.4 Derived Types:

### 2.11.5 Figure:

### 2.11.6 Schema Fragment:

## 2.12 Contract

### 2.12.1 Description:

Definition of a Financial Contract.

### 2.12.2 Contents:

**header** (exactly one occurrence; of the type ContractHeader) Contract header containing identification and other information which is independent of the type of financial product which is the subject of this contract.

**product** (exactly one occurrence; of the type Product) An abstract element used as a place holder for the substituting product elements.

**otherPartyPayment** (zero or more occurrences; of the type Payment) Other fees or additional payments associated with the contract, e.g. broker commissions, where one or more of the parties involved are not principal parties involved in the contract

**calculationAgent** (zero or one occurrence; of the type CalculationAgent) The ISDA Calculation Agent responsible for performing duties associated with an optional early termination

**calculationAgentBusinessCenter** (zero or one occurrence; of the type BusinessCenter) The city in which the office through which ISDA Calculation Agent is acting for purposes of the transaction is located The short-form confirm for a trade that is executed under a Sovereign or Asia Pacific Master Confirmation Agreement ( MCA ), does not need to specify the Calculation Agent. However, the confirm does need to specify the Calculation Agent City. This is due to the fact that the MCA sets the value for Calculation Agent but does not set the value for Calculation Agent City.

**collateral** (zero or one occurrence; of the type Collateral) Defines collateral obligations of a Party

**documentation** (zero or one occurrence; of the type Documentation) Defines the definitions that govern the document and should include the year and type of definitions referenced, along with any relevant documentation (such as master agreement) and the date it was signed

**governingLaw** (zero or one occurrence; of the type GoverningLaw) Governing Law applicable to this Contract

### 2.12.3 Used by:

## 2.13 ContractHeader

### 2.13.1 Description:

Contract header containing identification and other information which is independent of the type of financial product.

### 2.13.2 Contents:

**identifier** (one or more occurrences; of the type ContractIdentifier) Identification of the Contract. Each party to the contract may assign multiple identifiers.

**information** (zero or more occurrences; of the type ContractInformation) Information regarding the Contract from the perspective of the party referenced.

**contractDate** (exactly one occurrence; of the type IdentifiedDate) Corresponds to the trade date. This element will be renamed tradeDate in the next major version (5.0) of FpML.

### 2.13.3 Used by:

- Complex type: Contract

### 2.13.4 Derived Types:

### 2.13.5 Figure:

      <xsd:attribute name="id" type="xsd:ID"/>
    </xsd:extension>
  </xsd:simpleContent>
</xsd:complexType>
```

## 2.15 ContractIdentifier

### 2.15.1 Description:

A type defining a contract identifier issued by the indicated party.

### 2.15.2 Contents:

**partyReference** (exactly one occurrence; of the type PartyReference) A pointer style reference to a party identifier defined elsewhere in the document. The party referenced has allocated the contract identifier.

Either

**contractId** (one or more occurrences; of the type ContractId) A contract id which is not version aware.

Or

**versionedContractId** (one or more occurrences; of the type VersionedContractId) A contract id which is version aware.

### 2.15.3 Used by:

- Complex type: ContractHeader
- Complex type: ContractReference
- Complex type: LoanContractIdentifier

### 2.15.4 Derived Types:

### 2.15.5 Figure:

### 2.15.6 Schema Fragment:

```

## 2.17 ContractNovation

### 2.17.1 Description:

Details of the Contract Novation

### 2.17.2 Contents:

**transferor** (exactly one occurrence; of the type PartyReference) A pointer style reference to a party identifier defined elsewhere in the document. In a three-way novation the party referenced is the Transferor (outgoing party) in the novation. The Transferor means a party which transfers by novation to a Transferee all of its rights, liabilities, duties and obligations with respect to a Remaining Party. In a four-way novation the party referenced is Transferor 1 which transfers by novation to Transferee 1 all of its rights, liabilities, duties and obligations with respect to Transferor 2. ISDA 2004 Novation Term: Transferor (three-way novation) or Transferor 1 (four-way novation).

**transferee** (exactly one occurrence; of the type PartyReference) A pointer style reference to a party identifier defined elsewhere in the document. In a three-way novation the party referenced is the Transferee (incoming party) in the novation. Transferee means a party which accepts by way of novation all rights, liabilities, duties and obligations of a Transferor with respect to a Remaining Party. In a four-way novation the party referenced is Transferee 1 which accepts by way of novation the rights, liabilities, duties and obligations of Transferor 1. ISDA 2004 Novation Term: Transferee (three-way novation) or Transferee 1 (four-way novation).

**remainingParty** (exactly one occurrence; of the type PartyReference) A pointer style reference to a party identifier defined elsewhere in the document. In a three-way novation the party referenced is the Remaining Party in the novation. Remaining Party means a party which consents to a Transferor's transfer by novation and the acceptance thereof by the Transferee of all of the Transferor's rights, liabilities, duties and obligations with respect to such Remaining Party under and with respect of the Novated Amount of a transaction. In a four-way novation the party referenced is Transferor 2 per the ISDA definition and acts in the role of a Transferor. Transferor 2 transfers by novation to Transferee 2 all of its rights, liabilities, duties and obligations with respect to Transferor 1. ISDA 2004 Novation Term: Remaining Party (three-way novation) or Transferor 2 (four-way novation).

**otherRemainingParty** (zero or one occurrence; of the type PartyReference) A pointer style reference to a party identifier defined elsewhere in the document. This element is not applicable in a three-way novation and should be omitted. In a four-way novation the party referenced is Transferee 2. Transferee 2 means a party which accepts by way of novation the rights, liabilities, duties and obligations of Transferor 2. ISDA 2004 Novation Term: Transferee 2 (four-way novation).

**novationDate** (exactly one occurrence; of the type xsd:date) Specifies the date that one party's legal obligations with regard to a trade are transferred to another party. It corresponds to the Novation Date section of the 2004 ISDA Novation Definitions, section 1.16.

**novationContractDate** (zero or one occurrence; of the type xsd:date) Specifies the date the parties agree to assign or novate a Contract. If this element is not specified, the novationContractDate will be deemed to be the novationDate. It corresponds to the Novation Trade Date section of the 2004 ISDA Novation Definitions, section 1.17.

Either

**novatedAmount** (exactly one occurrence; of the type Money) The amount which represents the portion of the Old Contract being novated.

Or

**novatedNumberOfOptions** (exactly one occurrence; of the type xsd:decimal) The number of options which represent the portion of the Old Contract being novated.

Or

**novatedNumberOfUnits** (exactly one occurrence; of the type xsd:decimal) The number of options which represent the portion of the Old Contract being novated.

**fullFirstCalculationPeriod** (zero or one occurrence; of the type xsd:boolean) This element corresponds to the applicability of the Full First Calculation Period as defined in the 2004 ISDA Novation Definitions, section 1.20.

**firstPeriodStartDate** (zero or one occurrence; of the type FirstPeriodStartDate) Element that is used to be able to make sense of the "new transaction" without requiring reference back to the "old transaction". In the case of interest rate products there are potentially 2 "first period start dates" to reference – one with respect to each party to the new transaction. For Credit Default Swaps there is just the one with respect to the party that is the fixed rate payer.

**nonReliance** (zero or one occurrence; of the type Empty) This element corresponds to the non-Reliance section in the 2004 ISDA Novation Definitions, section 2.1 (c) (i). The element appears in the instance document when non-Reliance is applicable.

**creditDerivativesNotices** (zero or one occurrence; of the type CreditDerivativesNotices) This element should be specified if one or more of either a Credit Event Notice, Notice of Publicly Available Information, Notice of Physical Settlement or Notice of Intended Physical Settlement, as applicable, has been delivered by or to the Transferor or the Remaining Party. The type of notice or notices that have been delivered should be indicated by setting the relevant boolean element value(s) to true. The absence of the element means that no Credit Event Notice, Notice of Publicly Available Information, Notice of Physical Settlement or Notice of Intended Physical Settlement, as applicable, has been delivered by or to the Transferor or the Remaining Party.

**contractualDefinitions** (zero or more occurrences; of the type ContractualDefinitions) The definitions (such as those published by ISDA) that will define the terms of the novation transaction.

**contractualTermsSupplement** (zero or more occurrences; of the type ContractualTermsSupplement) A contractual supplement (such as those published by ISDA) that will apply to the trade.

**payment** (zero or one occurrence; of the type Payment) Payment for the Novation.

### 2.17.3 Used by:

- Complex type: ContractNovated
- Complex type: ContractNovatedCancelled

  </xsd:sequence>
</xsd:complexType>
```

## 2.18 ContractReference

### 2.18.1 Description:

A type which contains identifiers to a single contract, which are assigned by parties to the contract.

### 2.18.2 Contents:

**identifier** (one or more occurrences; of the type ContractIdentifier) A contract identifier which is assigned by a party to the contract.

### 2.18.3 Used by:

- Complex type: ChangeContract
- Complex type: ContractFullTerminationCancelled
- Complex type: ContractIncreasedCancelled
- Complex type: ContractNovatedCancelled
- Complex type: ContractPartialTerminationCancelled
- Complex type: ContractReferenceMessage

### 2.18.4 Derived Types:

### 2.18.5 Figure:

### 2.18.6 Schema Fragment:

```
<xsd:complexType name="ContractReference">
  <xsd:annotation>

  </xsd:complexContent>
</xsd:complexType>
```

## 2.20 CreditDerivativesNotices

### 2.20.1 Description:

### 2.20.2 Contents:

**creditEvent** (exactly one occurrence; of the type xsd:boolean) This element corresponds to the Credit Event Notice Delivered Under Old Transaction and Deemed Delivered Under New Transaction under the EXHIBIT C to 2004 ISDA Novation Definitions.

**publiclyAvailableInformation** (exactly one occurrence; of the type xsd:boolean) This element corresponds to the Notice of Publicly Available Information Delivered Under Old Transaction and Deemed Delivered Under New Transaction under the EXHIBIT C to 2004 ISDA Novation Definitions.

**physicalSettlement** (exactly one occurrence; of the type xsd:boolean) This element corresponds to the Notice of Intended Physical Settlement Delivered Under Old Transaction under the EXHIBIT C to 2004 ISDA Novation Definitions.

### 2.20.3 Used by:

### 2.20.4 Derived Types:

      </xsd:annotation>
    </xsd:element>
  </xsd:sequence>
</xsd:complexType>
```

## 2.21 DataDocument

### 2.21.1 Description:

A type defining a content model that is backwards compatible with older FpML releases and which can be used to contain sets of data without expressing any processing intention.

### 2.21.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type Document)

- The abstract base type from which all FpML compliant messages and documents must be derived.

**validation** (zero or more occurrences; of the type Validation)

**party** (zero or more occurrences; of the type Party) A legal entity or a subdivision of a legal entity.

### 2.21.3 Used by:

- Complex type: ValuationDocument

### 2.21.4 Derived Types:

- Complex type: ValuationDocument

### 2.21.5 Figure:

### 2.21.6 Schema Fragment:

      </xsd:annotation>
    </xsd:element>
  </xsd:sequence>
</xsd:complexType>
```

## 2.24 EventId

### 2.24.1 Description:

An event reference identifier allocated by a party. FpML does not define the domain values associated with this element. Note that the domain values for this element are not strictly an enumerated list.

### 2.24.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type `xsd:normalizedString`)

### 2.24.3 Used by:

- Complex type: Event

### 2.24.4 Derived Types:

### 2.24.5 Figure:

### 2.24.6 Schema Fragment:

```
<xsd:complexType name="EventId">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      An event reference identifier allocated by a party. FpML does not
      define the domain values associated with this element. Note that
      the domain values for this element are not strictly an enumerated
      list.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:simpleContent>
    <xsd:extension base="xsd:normalizedString">
      <xsd:attribute name="eventIdScheme" use="required" type="xsd:anyURI"/>
      <xsd:attribute name="id" type="xsd:ID"/>
    </xsd:extension>
  </xsd:simpleContent>
</xsd:complexType>
```

## 2.25 ExecutionDateTime

### 2.25.1 Description:

A type defining the trade execution date time and the source of it. For use inside containing types which already have a Reference to a Party that has assigned this trade execution date time.

### 2.25.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type xsd:dateTime)

### 2.25.3 Used by:

- Complex type: PartyTradeInformation

### 2.25.4 Derived Types:

### 2.25.5 Figure:

### 2.25.6 Schema Fragment:

```
<xsd:complexType name="ExecutionDateTime">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A type defining the trade execution date time and the source of
      it. For use inside containing types which already have a
      Reference to a Party that has assigned this trade execution date
      time.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:simpleContent>
    <xsd:extension base="xsd:dateTime">
      <xsd:attribute name="executionDateTimeScheme" type="xsd:anyURI">
        <xsd:annotation>
          <xsd:documentation xml:lang="en">
            Identification of the source (e.g. clock id) generating the
            execution date time.
          </xsd:documentation>
        </xsd:annotation>
      </xsd:attribute>
    </xsd:extension>
  </xsd:simpleContent>
</xsd:complexType>
```

## 2.26 FirstPeriodStartDate

### 2.26.1 Description:

### 2.26.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type xsd:date)

### • 2.26.3 Used by:

### 2.26.4 Derived Types:

### 2.26.5 Figure:

### 2.26.6 Schema Fragment:

```
<xsd:complexType name="FirstPeriodStartDate">
  <xsd:simpleContent>
    <xsd:extension base="xsd:date">
      <xsd:attribute name="href" use="required" type="xsd:IDREF" ecore:reference="Party"/>
    </xsd:extension>
  </xsd:simpleContent>
</xsd:complexType>
```

## 2.27 Increase

### 2.27.1 Description:

An event type that defines the content of an Increase transaction.

### 2.27.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type Event)

- A type defining the basic structure of FpML business events; it is refined by its derived types.

Either

**trade** (exactly one occurrence; of the type Trade) An element that allows the full details of the trade to be used as a mechanism for identifying the trade for which the post-trade event pertains

Or

**tradeReference** (exactly one occurrence; of the type PartyTradeIdentifiers) A container since an individual trade can be referenced by two or more different partyTradeIdentifier elements - each allocated by a different party.

**increaseTradeDate** (exactly one occurrence; of the type xsd:date) The date on which the the parties enter into the Increase transaction

**increaseEffectiveDate** (exactly one occurrence; of the type xsd:date) The date on which the Increase becomes effective

**payment** (zero or one occurrence; of the type Payment) A payment for the right to increase the trade.

### 2.27.3 Used by:

- Complex type: IncreaseConfirmed
- Complex type: RequestIncreaseConfirmation
- Complex type: TradeIncreaseRequest
- Complex type: TradeIncreaseResponse

### 2.27.4 Derived Types:

### 2.27.5 Figure:

### 2.27.6 Schema Fragment:

```
<xsd:complexType name="Increase">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      An event type that defines the content of an Increase
      transaction.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:complexContent>
    <xsd:extension base="Event">
      <xsd:sequence>
        <xsd:group ref="TradeOrTradeReference.model"/>
        <xsd:group ref="IncreaseDetails.model"/>
        <xsd:element name="payment" type="Payment" minOccurs="0">
          <xsd:annotation>
            <xsd:documentation xml:lang="en">
              A payment for the right to increase the trade.
            </xsd:documentation>
          </xsd:annotation>
        </xsd:element>
      </xsd:sequence>
    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

## 2.28 IndependentAmount

### 2.28.1 Description:

### 2.28.2 Contents:

**payerPartyReference** (exactly one occurrence; of the type PartyOrAccountReference) A reference to the party responsible for making the payments defined by this structure.

**receiverPartyReference** (exactly one occurrence; of the type PartyOrAccountReference) A reference to the party that receives the payments corresponding to this structure.

**paymentDetail** (one or more occurrences; of the type PaymentDetail) A container element allowing a schedule of payments associated with the Independent Amount.

### 2.28.3 Used by:

- Complex type: Collateral

### 2.28.4 Derived Types:

### 2.28.5 Figure:

### 2.28.6 Schema Fragment:

    </xsd:documentation>
  </xsd:annotation>
  <xsd:simpleContent>
    <xsd:extension base="xsd:normalizedString">
      <xsd:attribute name="id" type="xsd:ID"/>
      <xsd:attribute name="linkIdScheme" type="xsd:anyURI" use="required"/>
    </xsd:extension>
  </xsd:simpleContent>
</xsd:complexType>
```

## 2.30 PartyPortfolioName

### 2.30.1 Description:

A type to represent a portfolio name for a particular party.

### 2.30.2 Contents:

**partyReference** (exactly one occurrence; of the type PartyReference) A pointer style reference to a party identifier defined elsewhere in the document. The party referenced has allocated the trade identifier.

**portfolioName** (one or more occurrences; of the type PortfolioName)

### 2.30.3 Used by:

- Complex type: Portfolio

### 2.30.4 Derived Types:

### 2.30.5 Figure:

### 2.30.6 Schema Fragment:

```
<xsd:complexType name="PartyPortfolioName">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A type to represent a portfolio name for a particular party.
    </xsd:documentation>
  </xsd:annotation>

</xsd:complexType>
```

## 2.31 PartyRole

### 2.31.1 Description:

A generic party role type. This can be extended to provide specialization of roles.

### 2.31.2 Contents:

Either

**party** (exactly one occurrence; of the type PartyReference) A reference to the party fulfilling this role.

Or

**account** (exactly one occurrence; of the type AccountReference) A reference to the account fulfilling this role.

### 2.31.3 Used by:

- Complex type: TradeSide

### 2.31.4 Derived Types:

### 2.31.5 Figure:

### 2.31.6 Schema Fragment:

```
<xsd:complexType name="PartyRole">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A generic party role type. This can be extended to provide
      specialization of roles.

          A reference to the account fulfilling this role.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
  </xsd:choice>
</xsd:complexType>
```

## 2.32 PartyTradeIdentifier

### 2.32.1 Description:

A type defining one or more trade identifiers allocated to the trade by a party. A link identifier allows the trade to be associated with other related trades, e.g. trades forming part of a larger structured transaction. It is expected that for external communication of trade there will be only one tradeId sent in the document per party.

### 2.32.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type TradeIdentifier)

- A type defining a trade identifier issued by the indicated party.

**linkId** (zero or more occurrences; of the type LinkId) A link identifier allowing the trade to be associated with other related trades, e.g. the linkId may contain a tradeId for an associated trade or several related trades may be given the same linkId. FpML does not define the domain values associated with this element. Note that the domain values for this element are not strictly an enumerated list.

### 2.32.3 Used by:

- Complex type: AllocationTradeIdentifier
- Complex type: BlockTradeIdentifier
- Complex type: Allocation
- Complex type: AllocationCancelled
- Complex type: AllocationTradeIdentifier
- Complex type: BlockTradeIdentifier
- Complex type: CancelTradeConfirmation
- Complex type: CancelTradeMatch
- Complex type: ConfirmTrade
- Complex type: PartyTradeIdentifiers
- Complex type: TradeAmendment
- Complex type: TradeHeader
- Complex type: TradeIdentifyingItems
- Complex type: TradeValuationItem

### 2.32.4 Derived Types:

- Complex type: AllocationTradeIdentifier
- Complex type: BlockTradeIdentifier

### 2.32.5 Figure:

### 2.32.6 Schema Fragment:

```
<xsd:complexType name="PartyTradeIdentifier">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">

  </xsd:sequence>
</xsd:complexType>
```

## 2.34 PartyTradeInformation

### 2.34.1 Description:

A type defining additional information that may be recorded against a trade.

### 2.34.2 Contents:

**partyReference** (exactly one occurrence; of the type PartyReference) Identifies that party that has ownership of this information.

**trader** (zero or more occurrences; of the type Trader) Identifies the person or persons who assumed the role of trader for this trade.

**executionDateTime** (zero or one occurrence; of the type ExecutionDateTime) Trade execution date time provided by the owner of the party trade information.

### 2.34.3 Used by:

- Complex type: TradeHeader

### 2.34.4 Derived Types:

### 2.34.5 Figure:

### 2.34.6 Schema Fragment:

```
<xsd:complexType name="PartyTradeInformation">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">

        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
  </xsd:sequence>
</xsd:complexType>
```

## 2.35 PaymentDetail

### 2.35.1 Description:

### 2.35.2 Contents:

Either

**adjustablePaymentDate** (exactly one occurrence; of the type AdjustableDate2) A fixed amount payment date that shall be subject to adjustment in accordance with the applicable business day convention if it would otherwise fall on a day that is not a business day. The applicable business day convention and business day are those specified in the dateAdjustments element within the generalTerms component. ISDA 2003 Term: Fixed Rate Payer Payment Date

Or

**adjustedPaymentDate** (exactly one occurrence; of the type xsd:date) The adjusted payment date. This date should already be adjusted for any applicable business day convention. This component is not intended for use in trade confirmation but may be specified to allow the fee structure to also serve as a cashflow type component.

Or

**paymentDate** (exactly one occurrence; of the type AdjustableOrRelativeDate) Payment date.

Either

**paymentAmount** (exactly one occurrence; of the type Money) A fixed payment amount.

### 2.35.3 Used by:

- Complex type: IndependentAmount

### 2.35.4 Derived Types:

### 2.35.5 Figure:

### 2.35.6 Schema Fragment:

  </xsd:annotation>
</xsd:complexType>
```

## 2.37 PercentageRule

### 2.37.1 Description:

A type defining a content model for a calculation rule defined as percentage of the notional amount.

### 2.37.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type PaymentRule)

- The abstract base type from which all calculation rules of the independent amount must be derived.

**paymentPercent** (exactly one occurrence; of the type xsd:decimal) A percentage of the notional amount.

**notionalAmountReference** (exactly one occurrence; of the type NotionalAmountReference) A reference to the notional amount.

### 2.37.3 Used by:

### 2.37.4 Derived Types:

### 2.37.5 Figure:

### 2.37.6 Schema Fragment:

      </xsd:sequence>
    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

## 2.38 Portfolio

### 2.38.1 Description:

A type representing an arbitrary grouping of trade references.

### 2.38.2 Contents:

**partyPortfolioName** (zero or one occurrence; of the type PartyPortfolioName) The name of the portfolio together with the party that gave the name.

**tradeId** (zero or more occurrences; of the type TradeId)

**portfolio** (zero or more occurrences; of the type Portfolio) An arbitrary grouping of trade references (and possibly other portfolios).

### 2.38.3 Used by:

- Element: portfolio
- Complex type: QueryPortfolio
- Complex type: DataDocument
- Complex type: Portfolio

### 2.38.4 Derived Types:

- Complex type: QueryPortfolio

### 2.38.5 Figure:

### 2.38.6 Schema Fragment:

```

      <xsd:attribute name="portfolioNameScheme" type="xsd:anyURI"/>
    </xsd:extension>
  </xsd:simpleContent>
</xsd:complexType>
```

## 2.40 QueryParameter

### 2.40.1 Description:

A type representing criteria for defining a query portfolio. The criteria are made up of a QueryParameterId, QueryParameterValue and QueryParameterOperator.

### 2.40.2 Contents:

**queryParameterId** (exactly one occurrence; of the type QueryParameterId)

**queryParameterValue** (zero or one occurrence; of the type xsd:normalizedString)

**queryParameterOperator** (zero or one occurrence; of the type QueryParameterOperator)

### 2.40.3 Used by:

- Complex type: QueryPortfolio

### 2.40.4 Derived Types:

### 2.40.5 Figure:

### 2.40.6 Schema Fragment:

```
<xsd:complexType name="QueryParameter">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A type representing criteria for defining a query portfolio. The
      criteria are made up of a QueryParameterId, QueryParameterValue
      and QueryParameterOperator.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:sequence>
    <xsd:element name="queryParameterId" type="QueryParameterId"/>
    <xsd:element name="queryParameterValue" type="xsd:normalizedString" minOccurs="0"/>
    <xsd:element name="queryParameterOperator" type="QueryParameterOperator" minOccurs="0"/>
  </xsd:sequence>
</xsd:complexType>
```

## 2.41 QueryParameterId

### 2.41.1 Description:

A type representing an identifier for a parameter describing a query portfolio. An identifier can be anything from a product name like swap to a termination date.

### 2.41.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type xsd:normalizedString)

•

### 2.41.3 Used by:

- Complex type: QueryParameter

### 2.41.4 Derived Types:

### 2.41.5 Figure:

### 2.41.6 Schema Fragment:

```
<xsd:complexType name="QueryParameterId">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A type representing an identifier for a parameter describing a

      <xsd:attribute name="id" type="xsd:ID"/>
    </xsd:extension>
  </xsd:simpleContent>
</xsd:complexType>
```

## 2.42 QueryParameterOperator

### 2.42.1 Description:

A type representing an operator describing the relationship of a value to its corresponding identifier for a parameter describing a query portfolio. Possible relationships include equals, not equals, less than, greater than. Possible operators are listed in the queryParameterOperatorScheme.

### 2.42.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type xsd:normalizedString)

### 2.42.3 Used by:

- Complex type: QueryParameter

### 2.42.4 Derived Types:

### 2.42.5 Figure:

### 2.42.6 Schema Fragment:

<xsd:complexType name="QueryParameterOperator">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A type representing an operator describing the relationship of a
      value to its corresponding identifier for a parameter describing
      a query portfolio. Possible relationships include equals, not
      equals, less than, greater than. Possible operators are listed in
      the queryParameterOperatorScheme.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:simpleContent>
    <xsd:extension base="xsd:normalizedString">
      <xsd:attribute name="queryParameterOperatorScheme" type="xsd:anyURI" default="http://www.
      <xsd:attribute name="id" type="xsd:ID"/>
    </xsd:extension>
  </xsd:simpleContent>
</xsd:complexType>
```

## 2.43 QueryPortfolio

### 2.43.1 Description:

A type representing a portfolio obtained by querying the set of trades held in a repository. It contains trades matching the intersection of all criteria specified using one or more queryParameters or trades matching the union of two or more child queryPortfolios.

### 2.43.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type Portfolio)

- A type representing an arbitrary grouping of trade references.

**queryParameter** (one or more occurrences; of the type QueryParameter)

### 2.43.3 Used by:

- Element: queryPortfolio
- Complex type: RequestedPositions

### 2.43.4 Derived Types:

### 2.43.5 Figure:

### 2.43.6 Schema Fragment:

```
<xsd:complexType name="QueryPortfolio">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A type representing a portfolio obtained by querying the set of
      trades held in a repository. It contains trades matching the
      intersection of all criteria specified using one or more
      queryParameters or trades matching the union of two or more child
      queryPortfolios.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:complexContent>
    <xsd:extension base="Portfolio">
      <xsd:sequence>
        <xsd:element name="queryParameter" type="QueryParameter" maxOccurs="unbounded"/>
      </xsd:sequence>
    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

## 2.44 Strategy

### 2.44.1 Description:

A type defining a group of products making up a single trade.

### 2.44.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type Product)

- The base type which all FpML products extend.

**premiumProductReference** (zero or one occurrence; of the type ProductReference) Indicates which product within a strategy represents the premium payment.

**product** (one or more occurrences; of the type Product) An abstract element used as a place holder for the substituting product elements.

### 2.44.3 Used by:

- Element: strategy

### 2.44.4 Derived Types:

### 2.44.5 Figure:

### 2.44.6 Schema Fragment:

```
<xsd:complexType name="Strategy">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A type defining a group of products making up a single trade.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:complexContent>
    <xsd:extension base="Product">
      <xsd:sequence>
        <xsd:element name="premiumProductReference" type="ProductReference" minOccurs="0">
          <xsd:annotation>
            <xsd:documentation xml:lang="en">
              Indicates which product within a strategy represents the
              premium payment.
            </xsd:documentation>
          </xsd:annotation>
        </xsd:element>
        <xsd:element ref="product" maxOccurs="unbounded"/>
      </xsd:sequence>
    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

## 2.45 Trade

### 2.45.1 Description:

A type defining an FpML trade.

### 2.45.2 Contents:

**tradeHeader** (exactly one occurrence; of the type TradeHeader) The information on the trade which is not product specific, e.g. trade date.

**product** (exactly one occurrence; of the type Product) An abstract element used as a place holder for the substituting product elements.

**otherPartyPayment** (zero or more occurrences; of the type Payment) Other fees or additional payments associated with the trade, e.g. broker commissions, where one or more of the parties involved are not principal parties involved in the trade.

**brokerPartyReference** (zero or more occurrences; of the type PartyReference) Identifies that party (or parties) that brokered this trade.

**calculationAgent** (zero or one occurrence; of the type CalculationAgent) The ISDA Calculation Agent responsible for performing duties associated with an optional early termination

**calculationAgentBusinessCenter** (zero or one occurrence; of the type BusinessCenter) The city in which the office through which ISDA Calculation Agent is acting for purposes of the transaction is located The short-form confirm for a trade that is executed under a Sovereign or Asia Pacific Master Confirmation Agreement ( MCA ), does not need to specify the Calculation Agent. However, the confirm does need to specify the Calculation Agent City. This is due to the fact that the MCA sets the value for Calculation Agent but does not set the value for Calculation Agent City.

**collateral** (zero or one occurrence; of the type Collateral) Defines collateral obligations of a Party

**documentation** (zero or one occurrence; of the type Documentation) Defines the definitions that govern the document and should include the year and type of definitions referenced, along with any relevant documentation (such as master agreement) and the date it was signed.

**governingLaw** (zero or one occurrence; of the type GoverningLaw) Identification of the law governing the transaction.

**allocations** (zero or one occurrence; of the type Allocations) "Short-form" representation of allocations in which the key block economics are stated once within the trade structure, and the allocation data is contained in this allocations structure.

**tradeSide** (zero or one occurrence; of the type TradeSide) The parties to the Trade are grouped into Trade Sides. Each Trade has as many as two sides. Each side is a buyer or receiver of each leg or stream.

## 2.46 TradeDifference

### 2.46.1 Description:

A type used to record the details of a difference between two business objects/

### 2.46.2 Contents:

**differenceType** (exactly one occurrence; of the type DifferenceTypeEnum) The type of difference that exists.

**differenceSeverity** (exactly one occurrence; of the type DifferenceSeverityEnum) An indication of the severity of the difference.

**element** (exactly one occurrence; of the type xsd:string) The name of the element affected.

**basePath** (zero or one occurrence; of the type xsd:string) XPath to the element in the base object.

**baseValue** (zero or one occurrence; of the type xsd:string) The value of the element in the base object.

**otherPath** (zero or one occurrence; of the type xsd:string) XPath to the element in the other object.

**otherValue** (zero or one occurrence; of the type xsd:string) Value of the element in the other trade.

**missingElement** (zero or more occurrences; of the type xsd:string) Element(s) that are missing in the other trade.

**extraElement** (zero or more occurrences; of the type xsd:string) Element(s) that are extraneous in the other object.

**message** (exactly one occurrence; of the type xsd:string) A human readable description of the problem.

    </xsd:extension>  
  </xsd:simpleContent>  
</xsd:complexType>
```

## 2.51 TradeSide

### 2.51.1 Description:

The parties to the trade form into sides. Each side has defined roles in the lifecycle of the trade fulfilled by parties. Each party role is given in the likely order they would be filled during the lifecycle of a trade.

### 2.51.2 Contents:

**orderer** (zero or one occurrence; of the type PartyRole) The Party placing the order. This could be a fund manager acting on behalf of a client, or a hedge fund acting on it's own behalf. This is the role with the investment discretion.

**introducer** (zero or one occurrence; of the type PartyRole) Party that can relay an order directly to the trading floor at a firm. This is potentially a different firm, but may be the same as that taking the order. In effect the introducer is the first dealer to take the order. The reason an introducing dealer may forward a trade is sometime because it doesn't have the capacity to execute effectively but does have the relationship with the Orderer. Introducing Party is an industry standard term. This is semantically equivalent to the FIX and ISO20022 Introducing Firm.

**executor** (zero or one occurrence; of the type PartyRole) The Party executing or striking the trade. Executing Party is an industry standard term. This is semantically equivalent to the FIX and ISO20022 Executing Firm or Trader.

**confirmer** (zero or one occurrence; of the type PartyRole) The party that undertakes the confirmation process for this Trade Side. The confirmer essentially manages the matching and affirmation of trades. This is often the creditor or is increasingly outsourced to service providers such as Swapswire.

**creditor** (exactly one occurrence; of the type PartyRole) The party whose name appears on the contract as being responsible for credit of the trade. This is the party in the Trade Side the credit risk is against. For example if a hedge fund was to trade in the name of it's prime broker, then the prime broker would be the creditor.

**calculator** (zero or one occurrence; of the type PartyRole) The calculator is the Party that calculates, negotiates, and agrees the values to be paid at each payment date.

**settler** (zero or one occurrence; of the type PartyRole) The Settler is the party that makes the payments. Increasingly this is a service that can be externalized from the other roles. An example of a settlement service provide is SwapClear.

**beneficiary** (zero or one occurrence; of the type PartyRole) The party that suffers the economic effect of the trade. This is usually referred to as the primary Principal in FIX and ISO20022 - which is slightly confusing in that there are potentially many Princiपाल/Agency relationships. The beneficiary may be distinct from the creditor - an example is a Hedge Fund trading in the name of it's Prime Broker.

**accountant** (zero or more occurrences; of the type PartyRole) The Accountants for the trade. There are potentially many accountants. This is known in FIX and ISO20022 for Collective Investment Vehicles as the Third Party Administrator (TPA), however all trades for all parties have at least one party accounting for the trade.

### 2.51.3 Used by:

- Complex type: Trade

### 2.51.4 Derived Types:

### 2.51.5 Figure:

### 2.51.6 Schema Fragment:

```

## 2.54 VersionedTradeId

### 2.54.1 Description:

Trade Id with Version Support

### 2.54.2 Contents:

**tradeId** (exactly one occurrence; of the type TradeId)

**version** (exactly one occurrence; of the type xsd:nonNegativeInteger) The version number

**effectiveDate** (zero or one occurrence; of the type IdentifiedDate) Optionally it is possible to specify a version effective date when a versionId is supplied.

### 2.54.3 Used by:

- Complex type: TradeIdentifier

### 2.54.4 Derived Types:

### 2.54.5 Figure:

### 2.54.6 Schema Fragment:

```
<xsd:complexType name="VersionedTradeId">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      Trade Id with Version Support
    </xsd:documentation>
  </xsd:annotation>
  <xsd:sequence>

      </xsd:annotation>
    </xsd:group>
  </xsd:sequence>
</xsd:complexType>
```

### ***3 Global Elements***

## 3.1 event

### 3.1.1 Description:

An abstract global element used as a basis for substitution of event types

### 3.1.2 Contents:

Element event is defined by the complex type Event

### 3.1.3 Used by:

- Complex type: DataDocument

### 3.1.4 Substituted by:

- Element: creditEventNotice

### 3.1.5 Figure:

### 3.1.6 Schema Fragment:

```
<xsd:element name="event" type="Event" abstract="true">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      An abstract global element used as a basis for substitution of
      event types
    </xsd:documentation>
  </xsd:annotation>
</xsd:element>
```

## **3.2 strategy**

### **3.2.1 Description:**

A strategy product.

### **3.2.2 Contents:**

Element strategy is defined by the complex type Strategy

### **3.2.3 Used by:**

### **3.2.4 Substituted by:**

### **3.2.5 Figure:**

### **3.2.6 Schema Fragment:**

```
<xsd:element name="strategy" type="Strategy" substitutionGroup="product">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A strategy product.
    </xsd:documentation>
  </xsd:annotation>
</xsd:element>
```

## ***4 Groups***

## 4.1 AccountReferenceOrPartyReference.model

### 4.1.1 Description:

### 4.1.2 Contents:

Either

**accountReference** (exactly one occurrence; of the type AccountReference) Reference to the subaccount definition in the Party list.

Or

**partyReference** (exactly one occurrence; of the type PartyReference) Reference to the party definition.

### 4.1.3 Used by:

- Complex type: Allocation

### 4.1.4 Figure:

### 4.1.5 Schema Fragment:

```
<xsd:group name="AccountReferenceOrPartyReference.model">
  <xsd:choice>
    <xsd:element name="accountReference" type="AccountReference">

    <xsd:element name="partyReference" type="PartyReference">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          Reference to the party definition.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
  </xsd:choice>
</xsd:group>
```

## 4.2 AllocationContent.model

### 4.2.1 Description:

### 4.2.2 Contents:

**collateral** (zero or one occurrence; of the type Collateral) The sum that must be posted upfront to collateralize against counterparty credit risk.

**creditChargeAmount** (zero or one occurrence; of the type Money) Special credit fee assessed to certain institutions.

**approvals** (zero or one occurrence; of the type Approvals) A container for approval states in the workflow.

**masterConfirmationDate** (zero or one occurrence; of the type xsd:date) The date of the confirmation executed between the parties and intended to govern the allocated trade between those parties.

### 4.2.3 Used by:

- Complex type: Allocation

### 4.2.4 Figure:

### 4.2.5 Schema Fragment:

  </xsd:sequence>
</xsd:group>
```

## 4.5 ContractNovationDetails.model

### 4.5.1 Description:

Model group with Contract Novation element content.

### 4.5.2 Contents:

**transferor** (exactly one occurrence; of the type PartyReference) A pointer style reference to a party identifier defined elsewhere in the document. In a three-way novation the party referenced is the Transferor (outgoing party) in the novation. The Transferor means a party which transfers by novation to a Transferee all of its rights, liabilities, duties and obligations with respect to a Remaining Party. In a four-way novation the party referenced is Transferor 1 which transfers by novation to Transferee 1 all of its rights, liabilities, duties and obligations with respect to Transferor 2. ISDA 2004 Novation Term: Transferor (three-way novation) or Transferor 1 (four-way novation).

**transferee** (exactly one occurrence; of the type PartyReference) A pointer style reference to a party identifier defined elsewhere in the document. In a three-way novation the party referenced is the Transferee (incoming party) in the novation. Transferee means a party which accepts by way of novation all rights, liabilities, duties and obligations of a Transferor with respect to a Remaining Party. In a four-way novation the party referenced is Transferee 1 which accepts by way of novation the rights, liabilities, duties and obligations of Transferor 1. ISDA 2004 Novation Term: Transferee (three-way novation) or Transferee 1 (four-way novation).

**remainingParty** (exactly one occurrence; of the type PartyReference) A pointer style reference to a party identifier defined elsewhere in the document. In a three-way novation the party referenced is the Remaining Party in the novation. Remaining Party means a party which consents to a Transferor's transfer by novation and the acceptance thereof by the Transferee of all of the Transferor's rights, liabilities, duties and obligations with respect to such Remaining Party under and with respect of the Novated Amount of a transaction. In a four-way novation the party referenced is Transferor 2 per the ISDA definition and acts in the role of a Transferor. Transferor 2 transfers by novation to Transferee 2 all of its rights, liabilities, duties and obligations with respect to Transferor 1. ISDA 2004 Novation Term: Remaining Party (three-way novation) or Transferor 2 (four-way novation).

**otherRemainingParty** (zero or one occurrence; of the type PartyReference) A pointer style reference to a party identifier defined elsewhere in the document. This element is not applicable in a three-way novation and should be omitted. In a four-way novation the party referenced is Transferee 2. Transferee 2 means a party which accepts by way of novation the rights, liabilities, duties and obligations of Transferor 2. ISDA 2004 Novation Term: Transferee 2 (four-way novation).

**novationDate** (exactly one occurrence; of the type xsd:date) Specifies the date that one party's legal obligations with regard to a trade are transferred to another party. It corresponds to the Novation Date section of the 2004 ISDA Novation Definitions, section 1.16.

**novationContractDate** (zero or one occurrence; of the type xsd:date) Specifies the date the parties agree to assign or novate a Contract. If this element is not specified, the novationContractDate will be deemed to be the novationDate. It corresponds to the Novation Trade Date section of the 2004 ISDA Novation Definitions, section 1.17.

Either

**novatedAmount** (exactly one occurrence; of the type Money) The amount which represents the portion of the Old Contract being novated.

Or

**novatedNumberOfOptions** (exactly one occurrence; of the type xsd:decimal) The number of options which represent the portion of the Old Contract being novated.

Or

**novatedNumberOfUnits** (exactly one occurrence; of the type xsd:decimal) The number of options which represent the portion of the Old Contract being novated.

**fullFirstCalculationPeriod** (zero or one occurrence; of the type xsd:boolean) This element corresponds to the applicability of the Full First Calculation Period as defined in the 2004 ISDA Novation Definitions, section 1.20.

**firstPeriodStartDate** (zero or one occurrence; of the type FirstPeriodStartDate) Element that is used to be able to make sense of the "new transaction" without requiring reference back to the "old transaction". In the case of interest rate products there are potentially 2 "first period start dates" to reference – one with respect to each party to the new transaction. For Credit Default Swaps there is just the one with respect to the party that is the fixed rate payer.

**nonReliance** (zero or one occurrence; of the type Empty) This element corresponds to the non-Reliance section in the 2004 ISDA Novation Definitions, section 2.1 (c) (i). The element appears in the instance document when non-Reliance is applicable.

**creditDerivativesNotices** (zero or one occurrence; of the type CreditDerivativesNotices) This element should be specified if one or more of either a Credit Event Notice, Notice of Publicly Available Information, Notice of Physical Settlement or Notice of Intended Physical Settlement, as applicable, has been delivered by or to the Transferor or the Remaining Party. The type of notice or notices that have been delivered should be indicated by setting the relevant boolean element value(s) to true. The absence of the element means that no Credit Event Notice, Notice of Publicly Available Information, Notice of Physical Settlement or Notice of Intended Physical Settlement, as applicable, has been delivered by or to the Transferor or the Remaining Party.

**contractualDefinitions** (zero or more occurrences; of the type ContractualDefinitions) The definitions (such as those published by ISDA) that will define the terms of the novation transaction.

**contractualTermsSupplement** (zero or more occurrences; of the type ContractualTermsSupplement) A contractual supplement (such as those published by ISDA) that will apply to the trade.

## 4.6 ContractOrContractReference.model

### 4.6.1 Description:

Choice between identification and representation of the contract.

### 4.6.2 Contents:

Either

**contract** (exactly one occurrence; of the type Contract) An element that allows the full details of the contract to be used as a mechanism for identifying the contract

Or

**contractReference** (exactly one occurrence; of the type ContractReference) A container since an individual contract can be referenced by two or more different partyTradeIdentifier elements - each allocated by a different party.

### 4.6.3 Used by:

### 4.6.4 Figure:

### 4.6.5 Schema Fragment:

```

## 4.8 TradeOrTradeReference.model

### 4.8.1 Description:

Choice between identification and representation of trade execution.

### 4.8.2 Contents:

Either

**trade** (exactly one occurrence; of the type Trade) An element that allows the full details of the trade to be used as a mechanism for identifying the trade for which the post-trade event pertains

Or

**tradeReference** (exactly one occurrence; of the type PartyTradeIdentifiers) A container since an individual trade can be referenced by two or more different partyTradeIdentifier elements - each allocated by a different party.

### 4.8.3 Used by:

- Complex type: AffectedTransactions
- Complex type: Increase
- Complex type: Termination
- Complex type: TradeErrorResponse
- Complex type: TradeNotFound

### 4.8.4 Figure:

### 4.8.5 Schema Fragment:

                    the same as that taking the order. In effect the introducer
                    is the first dealer to take the order. The reason an
                    introducing dealer may forward a trade is sometime because
                    it doesn't have the capacity to execute effectively but
                    does have the relationship with the Orderer. Introducing
                    Party is an industry standard term. This is semantically
                    equivalent to the FIX and ISO20022 Introducing Firm.
                </xsd:documentation>

## ***1 Global Simple Types***

## 1.1 AveragingInOutEnum

### 1.1.1 Description:

The type of averaging used in an Asian option.

### 1.1.2 Contents:

Inherited element(s): (This definition restricts the content defined by the type xsd:token)

Value	Source	Description
In	<a href="http://www.FpML.org">http://www.FpML.org</a>	The average price is used to derive the strike price. Also known as "Asian strike" style option.
Out	<a href="http://www.FpML.org">http://www.FpML.org</a>	The average price is used to derive the expiration price. Also known as "Asian price" style option.
Both	<a href="http://www.FpML.org">http://www.FpML.org</a>	The average price is used to derive both the strike and the expiration price.

### 1.1.3 Used by:

### 1.1.4 Derived Types:

### 1.1.5 Schema Fragment:

```
<xsd:simpleType name="AveragingInOutEnum">
  <xsd:annotation>
    <xsd:documentation source="http://www.FpML.org" xml:lang="en">
      The type of averaging used in an Asian option.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:restriction base="xsd:token">
    <xsd:enumeration value="In">
      <xsd:annotation>
        <xsd:documentation source="http://www.FpML.org" xml:lang="en">
          The average price is used to derive the strike price. Also
          known as "Asian strike" style option.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:enumeration>
    <xsd:enumeration value="Out">
      <xsd:annotation>
        <xsd:documentation source="http://www.FpML.org" xml:lang="en">
          The average price is used to derive the expiration price.
          Also known as "Asian price" style option.
        </xsd:documentation>

    </xsd:enumeration>
    <xsd:enumeration value="Both">
      <xsd:annotation>
        <xsd:documentation source="http://www.FpML.org" xml:lang="en">
          The average price is used to derive both the strike and the
          expiration price.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:enumeration>
  </xsd:restriction>
</xsd:simpleType>
```

## 1.2 AveragingMethodEnum

### 1.2.1 Description:

The method of calculation to be used when averaging rates. Per ISDA 2000 Definitions, Section 6.2. Certain Definitions Relating to Floating Amounts.

### 1.2.2 Contents:

Inherited element(s): (This definition restricts the content defined by the type xsd:token)

Value	Source	Description
Unweighted	<a href="http://www.FpML.org">http://www.FpML.org</a>	The arithmetic mean of the relevant rates for each reset date.
Weighted	<a href="http://www.FpML.org">http://www.FpML.org</a>	The arithmetic mean of the relevant rates in effect for each day in a calculation period calculated by multiplying each relevant rate by the number of days such relevant rate is in effect, determining the sum of such products and dividing such sum by the number of days in the calculation period.

### 1.2.3 Used by:

### 1.2.4 Derived Types:

### 1.2.5 Schema Fragment:

```
<xsd:simpleType name="AveragingMethodEnum">
  <xsd:annotation>
    <xsd:documentation source="http://www.FpML.org" xml:lang="en">
      The method of calculation to be used when averaging rates. Per
      ISDA 2000 Definitions, Section 6.2. Certain Definitions Relating
      to Floating Amounts.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:restriction base="xsd:token">

        <xsd:documentation source="http://www.FpML.org" xml:lang="en">
          The arithmetic mean of the relevant rates for each reset
          date.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:enumeration>
    <xsd:enumeration value="Weighted">
      <xsd:annotation>
        <xsd:documentation source="http://www.FpML.org" xml:lang="en">
          The arithmetic mean of the relevant rates in effect for each
          day in a calculation period calculated by multiplying each
          relevant rate by the number of days such relevant rate is in
          effect, determining the sum of such products and dividing
          such sum by the number of days in the calculation period.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:enumeration>
  </xsd:restriction>
</xsd:simpleType>
```

## 1.3 BreakageCostEnum

### 1.3.1 Description:

When breakage cost is applicable, defines who is calculating it.

### 1.3.2 Contents:

Inherited element(s): (This definition restricts the content defined by the type xsd:token)

Value	Source	Description
AgentBank		Breakage cost is calculated by the agent bank.
Lender		Breakage cost is calculated by the lender.

### 1.3.3 Used by:

### 1.3.4 Derived Types:

### 1.3.5 Schema Fragment:

```
<xsd:simpleType name="BreakageCostEnum">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      When breakage cost is applicable, defines who is calculating it.
    </xsd:documentation>

  <xsd:restriction base="xsd:token">
    <xsd:enumeration value="AgentBank">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          Breakage cost is calculated by the agent bank.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:enumeration>
    <xsd:enumeration value="Lender">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          Breakage cost is calculated by the lender.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:enumeration>
  </xsd:restriction>
</xsd:simpleType>
```

## 1.4 BusinessDayConventionEnum

### 1.4.1 Description:

The convention for adjusting any relevant date if it would otherwise fall on a day that is not a valid business day. Note that FRN is included here as a type of business day convention although it does not strictly fall within ISDA's definition of a Business Day Convention and does not conform to the simple definition given above.

### 1.4.2 Contents:

Inherited element(s): (This definition restricts the content defined by the type xsd:token)

Value	Source	Description
FOLLOWING	<a href="http://www.FpML.org">http://www.FpML.org</a>	The non-business date will be adjusted to the first following day that is a business day
FRN	<a href="http://www.FpML.org">http://www.FpML.org</a>	Per 2000 ISDA Definitions, Section 4.11. FRN Convention; Eurodollar Convention.
MODFOLLOWING	<a href="http://www.FpML.org">http://www.FpML.org</a>	The non-business date will be adjusted to the first following day that is a business day unless that day falls in the next calendar month, in which case that date will be the first preceding day that is a business day.
PRECEDING	<a href="http://www.FpML.org">http://www.FpML.org</a>	The non-business day will be adjusted to the first preceding day that is a business day.
MODPRECEDING	<a href="http://www.FpML.org">http://www.FpML.org</a>	The non-business date will be adjusted to the first preceding day that is a business day unless that day falls in the previous calendar month, in which case that date will be the first following day that us a business day.
NONE	<a href="http://www.FpML.org">http://www.FpML.org</a>	The date will not be adjusted if it falls on a day that is not a business day.
NotApplicable	<a href="http://www.FpML.org">http://www.FpML.org</a>	The date adjustments conventions are defined elsewhere, so it is not required to specify them here.

### 1.4.3 Used by:

### 1.4.4 Derived Types:

### 1.4.5 Schema Fragment:

## 1.13 DividendDateReferenceEnum

### 1.13.1 Description:

The reference to a dividend date.

### 1.13.2 Contents:

Inherited element(s): (This definition restricts the content defined by the type xsd:token)

Value	Source	Description
ExDate	<a href="http://www.FpML.org">http://www.FpML.org</a>	Date on which a holder of the security is entitled to the dividend.
DividendPaymentDate	<a href="http://www.FpML.org">http://www.FpML.org</a>	Date on which the dividend will be paid by the issuer.
RecordDate	<a href="http://www.FpML.org">http://www.FpML.org</a>	Date on which the dividend will be recorded in the books of the paying agent.
TerminationDate	<a href="http://www.FpML.org">http://www.FpML.org</a>	Termination date of the swap.
EquityPaymentDate	<a href="http://www.FpML.org">http://www.FpML.org</a>	Equity payment date of the swap.
FollowingPaymentDate	<a href="http://www.FpML.org">http://www.FpML.org</a>	The next payment date of the swap.
AdHocDate	<a href="http://www.FpML.org">http://www.FpML.org</a>	The dividend date will be specified ad hoc by the parties, typically on the dividend ex-date
CumulativeEquityPaid	<a href="http://www.FpML.org">http://www.FpML.org</a>	Total of paid dividends, paid on next following Cash Settlement Payment Date, which is immediately following the Dividend Period during which the dividend is paid by the Issuer to the holders of record of a Share.
CumulativeLiborPaid	<a href="http://www.FpML.org">http://www.FpML.org</a>	Total of paid dividends, paid on next following Payment Date, which is immediately following the Dividend Period during which the dividend is paid by the Issuer to the holders of record of a Share.
CumulativeEquityExDiv	<a href="http://www.FpML.org">http://www.FpML.org</a>	Total of dividends which go ex, paid on next following Cash Settlement Payment Date, which is immediately following the Dividend Period during which the Shares commence trading ex-dividend on the Exchange
CumulativeLiborExDiv	<a href="http://www.FpML.org">http://www.FpML.org</a>	Total of dividends which

		go ex, paid on next following Payment Date, which is immediately following the Dividend Period during which the Shares commence trading ex-dividend on the Exchange, or where the date on which the Shares commence trading ex-dividend is a Payment Date, such Payment Date.
SharePayment	<a href="http://www.FpML.org">http://www.FpML.org</a>	If "Dividend Payment Date(s)" is specified in the Transaction Supplement as "Share Payment", then the Dividend Payment Date in respect of a Dividend Amount shall fall on a date on or before the date that is two (or any other number that is specified in the Transaction Supplement) Currency Business Days following the day on which the Issuer of the Shares pays the relevant dividend to holders of record of the Shares
CashSettlementPaymentDate	<a href="http://www.FpML.org">http://www.FpML.org</a>	If "Dividend Payment Date(s)" is specified in the Transaction Supplement as "Cash Settlement Payment Date", then the Dividend Payment Date in respect of a Dividend Amount shall be the Cash Settlement Payment Date relating to the end of the Dividend Period during which the Shares commenced trading "ex" the relevant dividend on the Exchange
FloatingAmountPaymentDate	<a href="http://www.FpML.org">http://www.FpML.org</a>	If "Dividend Payment Date(s)" is specified in the Transaction Supplement as "Floating Amount Payment Date", then the Dividend Payment Date in respect of a Dividend Amount shall be the first Payment Date falling at least one Settlement Cycle after the date that the Shares have commenced trading "ex" the relevant dividend on the Exchange.

## 1.20 FxBarrierTypeEnum

### 1.20.1 Description:

The specification of whether a barrier within an FX OTC option is a knockin or knockout, as well as whether it is a standard barrier or a reverse barrier.

### 1.20.2 Contents:

Inherited element(s): (This definition restricts the content defined by the type xsd:token)

Value	Source	Description
Knockin	<a href="http://www.FpML.org">http://www.FpML.org</a>	Option exists once the barrier is hit. The trigger rate is out-of-the money in relation to the strike rate.
Knockout	<a href="http://www.FpML.org">http://www.FpML.org</a>	Option ceases to exist once the barrier is hit. The trigger rate is out-of-the-money in relation to the strike rate.
ReverseKnockin	<a href="http://www.FpML.org">http://www.FpML.org</a>	Option exists once the barrier is hit. The trigger rate is in-the money in relation to the strike rate.
ReverseKnockout	<a href="http://www.FpML.org">http://www.FpML.org</a>	Option ceases to exist once the barrier is hit. The trigger rate is in-the money in relation to the strike rate.

## 1.33 OnGoingFeeTypeEnum

### 1.33.1 Description:

The list of accruing fee types associated with a facility.

### 1.33.2 Contents:

Inherited element(s): (This definition restricts the content defined by the type xsd:token)

Value	Source	Description
CommitmentFee		Calculated as a percentage of the unutilized portion of the facility.
UtilizationFee		Calculated as a percentage of the utilized portion of the facility. This fee type is subject to banding rules – different portions of the utilization amount may be subject to different percentages.
FacilityFee		Calculated as a percentage of the global commitment amount of a facility.

### 1.33.3 Used by:

## 1.43 QuotationSideEnum

### 1.43.1 Description:

The side from which perspective a value is quoted.

### 1.43.2 Contents:

Inherited element(s): (This definition restricts the content defined by the type xsd:token)

Value	Source	Description
Bid	http://www.FpML.org	A value "bid" by a buyer for an asset, i.e. the value a buyer is willing to pay.
Ask	http://www.FpML.org	A value "asked" by a seller for an asset, i.e. the value at which a seller is willing to sell.
Mid	http://www.FpML.org	A value midway between the bid and the ask value.

## 1.49 RollConventionEnum

### 1.49.1 Description:

The convention for determining the sequence of calculation period end dates. It is used in conjunction with a specified frequency and the regular period start date of a calculation period, e.g. semi-annual IMM roll dates.

### 1.49.2 Contents:

Inherited element(s): (This definition restricts the content defined by the type xsd:token)

Value	Source	Description
EOM	<a href="http://www.FpML.org">http://www.FpML.org</a>	Rolls on month end dates irrespective of the length of the month and the previous roll day.
FRN	<a href="http://www.FpML.org">http://www.FpML.org</a>	Roll days are determined according to the FRN Convention or Eurodollar Convention as described in ISDA 2000 definitions.
IMM	<a href="http://www.FpML.org">http://www.FpML.org</a>	IMM Settlement Dates. The third Wednesday of the (delivery) month.
IMMCAD	<a href="http://www.FpML.org">http://www.FpML.org</a>	The last trading day/expiration day of the Canadian Derivatives Exchange (Bourse de Montreal Inc) Three-month Canadian Bankers' Acceptance Futures (Ticker Symbol BAX). The second London banking day prior to the third Wednesday of the contract month. If the determined day is a Bourse or bank holiday in Montreal or Toronto, the last trading day shall be the previous bank business day. Per Canadian Derivatives Exchange BAX contract specification.
IMMAUD	<a href="http://www.FpML.org">http://www.FpML.org</a>	The last trading day of the Sydney Futures Exchange 90 Day Bank Accepted Bills Futures contract (see <a href="http://www.sfe.com.au/content/sfe/tra">http://www.sfe.com.au/content/sfe/tra</a> ) One Sydney business day preceding the second Friday of the relevant settlement month.
IMMNZD	<a href="http://www.FpML.org">http://www.FpML.org</a>	The last trading day of the Sydney Futures Exchange NZ 90 Day Bank Bill Futures contract (see <a href="http://www.sfe.com.au/content/sfe/tra">http://www.sfe.com.au/content/sfe/tra</a> ) The first Wednesday after the ninth day of the

		relevant settlement month.
SFE	<a href="http://www.sfe.com.a">http://www.sfe.com.a</a>	Sydney Futures Exchange 90-Day Bank Accepted Bill Futures Settlement Dates. The second Friday of the (delivery) month.
NONE	<a href="http://www.FpML.org">http://www.FpML.org</a>	The roll convention is not required. For example, in the case of a daily calculation frequency.
TBILL	<a href="http://www.publicdeb">http://www.publicdeb</a>	13-week and 26-week U.S. Treasury Bill Auction Dates. Each Monday except for U.S. (New York) holidays when it will occur on a Tuesday.
1	<a href="http://www.FpML.org">http://www.FpML.org</a>	Rolls on the 1st day of the month.
2	<a href="http://www.FpML.org">http://www.FpML.org</a>	Rolls on the 2nd day of the month.
3	<a href="http://www.FpML.org">http://www.FpML.org</a>	Rolls on the 3rd day of the month.
4	<a href="http://www.FpML.org">http://www.FpML.org</a>	Rolls on the 4th day of the month.
5	<a href="http://www.FpML.org">http://www.FpML.org</a>	Rolls on the 4th day of the month.
6	<a href="http://www.FpML.org">http://www.FpML.org</a>	Rolls on the 6th day of the month.
7	<a href="http://www.FpML.org">http://www.FpML.org</a>	Rolls on the 7th day of the month.
8	<a href="http://www.FpML.org">http://www.FpML.org</a>	Rolls on the 8th day of the month.
9	<a href="http://www.FpML.org">http://www.FpML.org</a>	Rolls on the 9th day of the month.
10	<a href="http://www.FpML.org">http://www.FpML.org</a>	Rolls on the 10th day of the month.
11	<a href="http://www.FpML.org">http://www.FpML.org</a>	Rolls on the 11th day of the month.
12	<a href="http://www.FpML.org">http://www.FpML.org</a>	Rolls on the 12th day of the month.
13	<a href="http://www.FpML.org">http://www.FpML.org</a>	Rolls on the 13th day of the month.
14	<a href="http://www.FpML.org">http://www.FpML.org</a>	Rolls on the 14th day of the month.

## 1.50 RoundingDirectionEnum

### 1.50.1 Description:

The method of rounding a fractional number.

### 1.50.2 Contents:

Inherited element(s): (This definition restricts the content defined by the type xsd:token)

Value	Source	Description
Up	<a href="http://www.FpML.org">http://www.FpML.org</a>	A fractional number will be rounded up to the specified number of decimal places (the precision). For example, 5.21 and 5.25 rounded up to 1 decimal place are 5.3 and 5.3 respectively.
Down	<a href="http://www.FpML.org">http://www.FpML.org</a>	A fractional number will be rounded down to the specified number of decimal places (the precision). For example, 5.29 and 5.25 rounded down to 1 decimal place are 5.2 and 5.2 respectively.
Nearest	<a href="http://www.FpML.org">http://www.FpML.org</a>	A fractional number will be rounded either up or down to the specified number of decimal places (the precision) depending on its value. For example, 5.24 would be rounded down to 5.2 and 5.25 would be rounded up to 5.3 if a precision of 1 decimal place were specified.

## 1.52 ShareExtraordinaryEventEnum

### 1.52.1 Description:

Defines the consequences of extraordinary events relating to the underlying.

### 1.52.2 Contents:

Inherited element(s): (This definition restricts the content defined by the type xsd:token)

Value	Source	Description
AlternativeObligation	<a href="http://www.FpML.org">http://www.FpML.org</a>	The trade continues such that the underlying now consists of the New Shares and/or the Other Consideration, if any, and the proceeds of any redemption, if any, that the holder of the underlying Shares would have been entitled to.
CancellationAndPayment	<a href="http://www.FpML.org">http://www.FpML.org</a>	The trade is cancelled and a cancellation fee will be paid by one party to the other.
OptionsExchange	<a href="http://www.FpML.org">http://www.FpML.org</a>	The trade will be adjusted by the Calculation Agent in accordance with the adjustments made by any exchange on which options on the underlying are listed.
CalculationAgent	<a href="http://www.FpML.org">http://www.FpML.org</a>	The Calculation Agent will determine what adjustment is required to offset any change to the economics of the trade. If the Calculation Agent cannot achieve this, the trade goes to Cancellation and Payment with the Calculation Agent deciding on the value of the cancellation fee. Adjustments may not be made to account solely for changes in volatility, expected dividends, stock loan rate or liquidity.
ModifiedCalculationAgent	<a href="http://www.FpML.org">http://www.FpML.org</a>	The Calculation Agent will determine what adjustment is required to offset any change to the economics of the trade. If the Calculation Agent cannot achieve this, the trade goes to Cancellation and Payment with the Calculation Agent deciding on the value of the cancellation fee.

		Adjustments to account for changes in volatility, expected dividends, stock loan rate or liquidity are allowed.
PartialCancellationAndPayment	http://www.FpML.org	Applies to Basket Transactions. The portion of the Basket made up by the affected Share will be cancelled and a cancellation fee will be paid from one party to the other. The remainder of the trade continues.
Component	http://www.FpML.org	If this is a Share-for-Combined merger event (Shares are replaced with New Shares and Other Consideration), then different treatment can be applied to each component if the parties have specified this.

# ***1 Global Complex Types***

## 1.1 BrokerEquityOption

### 1.1.1 Description:

A type for defining the broker equity options.

### 1.1.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type EquityDerivativeShortFormBase)

- A type for defining short form equity option basic features

**deltaCrossed** (exactly one occurrence; of the type xsd:boolean)

**brokerageFee** (exactly one occurrence; of the type Money)

**brokerNotes** (exactly one occurrence; of the type xsd:string)

### 1.1.3 Used by:

- Element: brokerEquityOption

### 1.1.4 Derived Types:

### 1.1.5 Figure:

### 1.1.6 Schema Fragment:

```
<xsd:complexType name="BrokerEquityOption">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A type for defining the broker equity options.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:complexContent>
    <xsd:extension base="EquityDerivativeShortFormBase">
      <xsd:sequence>
        <xsd:element name="deltaCrossed" type="xsd:boolean"/>
        <xsd:element name="brokerageFee" type="Money"/>
        <xsd:element name="brokerNotes" type="xsd:string"/>
      </xsd:sequence>
    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

## 1.2 EquityAmericanExercise

### 1.2.1 Description:

A type for defining exercise procedures associated with an American style exercise of an equity option. This entity inherits from the type SharedAmericanExercise.

### 1.2.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type SharedAmericanExercise)

- TBA

**latestExerciseTimeType** (zero or one occurrence; of the type TimeTypeEnum) The latest time of day at which the equity option can be exercised, for example the official closing time of the exchange.

**equityExpirationTimeType** (exactly one occurrence; of the type TimeTypeEnum) The time of day at which the equity option expires, for example the official closing time of the exchange.

**equityExpirationTime** (zero or one occurrence; of the type BusinessCenterTime) The specific time of day at which the equity option expires.

**equityMultipleExercise** (zero or one occurrence; of the type EquityMultipleExercise) The presence of this element indicates that the option may be exercised on different days. It is not applicable to European options.

### 1.2.3 Used by:

- Complex type: EquityExerciseValuationSettlement

### 1.2.4 Derived Types:

### 1.2.5 Figure:

### 1.2.6 Schema Fragment:

```
<xsd:complexType name="EquityAmericanExercise">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">

</xsd:extension>
</xsd:complexContent>
</xsd:complexType>
```

## 1.3 EquityBermudaExercise

### 1.3.1 Description:

A type for defining exercise procedures associated with a Bermuda style exercise of an equity option. The term Bermuda is adopted in FpML for consistency with the ISDA Definitions.

### 1.3.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type SharedAmericanExercise)

- TBA

**bermudaExerciseDates** (exactly one occurrence; of the type DateList) List of Exercise Dates for a Bermuda option

**latestExerciseTimeType** (zero or one occurrence; of the type TimeTypeEnum) The latest time of day at which the equity option can be exercised, for example the official closing time of the exchange.

**equityExpirationTimeType** (exactly one occurrence; of the type TimeTypeEnum) The time of day at which the equity option expires, for example the official closing time of the exchange.

**equityExpirationTime** (zero or one occurrence; of the type BusinessCenterTime) The specific time of day at which the equity option expires.

**equityMultipleExercise** (zero or one occurrence; of the type EquityMultipleExercise) The presence of this element indicates that the option may be exercised on different days. It is not applicable to European options.

### 1.3.3 Used by:

- Complex type: EquityExerciseValuationSettlement

### 1.3.4 Derived Types:

### 1.3.5 Figure:

### 1.3.6 Schema Fragment:

</xsd:complexType>
```

## 1.4 EquityDerivativeBase

### 1.4.1 Description:

A type for defining the common features of equity derivatives.

### 1.4.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type Product)

- The base type which all FpML products extend.

**buyerPartyReference** (exactly one occurrence; of the type PartyOrTradeSideReference) A reference to the party that buys this instrument, ie. pays for this instrument and receives the rights defined by it. See 2000 ISDA definitions Article 11.1 (b). In the case of FRAs this the fixed rate payer.

**sellerPartyReference** (exactly one occurrence; of the type PartyOrTradeSideReference) A reference to the party that sells ("writes") this instrument, i.e. that grants the rights defined by this instrument and in return receives a payment for it. See 2000 ISDA definitions Article 11.1 (a). In the case of FRAs this is the floating rate payer.

**optionType** (exactly one occurrence; of the type OptionTypeEnum) The type of option transaction.

**equityEffectiveDate** (zero or one occurrence; of the type xsd:date) Effective date for a forward starting option

**underlyer** (exactly one occurrence; of the type Underlyer) Specifies the underlying component, which can be either one or many and consists in either equity, index or convertible bond component, or a combination of these.

**notional** (zero or one occurrence; of the type Money) The notional amount.

**equityExercise** (exactly one occurrence; of the type EquityExerciseValuationSettlement) The parameters for defining how the equity option can be exercised, how it is valued and how it is settled.

**feature** (zero or one occurrence; of the type OptionFeatures) Asian, Barrier, Knock and Pass Through features

**fxFeature** (zero or one occurrence; of the type FxFeature) Quanto, Composite, or Cross Currency FX features

**strategyFeature** (zero or one occurrence; of the type StrategyFeature) A equity option simple strategy feature

### 1.4.3 Used by:

- Complex type: EquityDerivativeLongFormBase
- Complex type: EquityDerivativeShortFormBase

### 1.4.4 Derived Types:

- Complex type: EquityDerivativeLongFormBase
- Complex type: EquityDerivativeShortFormBase

## 1.5 EquityDerivativeLongFormBase

### 1.5.1 Description:

type for defining the common features of equity derivatives.

### 1.5.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type EquityDerivativeBase)

- A type for defining the common features of equity derivatives.

**dividendConditions** (zero or one occurrence; of the type DividendConditions)

**methodOfAdjustment** (exactly one occurrence; of the type MethodOfAdjustmentEnum) Defines how adjustments will be made to the contract should one or more of the extraordinary events occur.

**extraordinaryEvents** (exactly one occurrence; of the type ExtraordinaryEvents) Where the underlying is shares, specifies events affecting the issuer of those shares that may require the terms of the transaction to be adjusted.

**equityFeatures** (zero or one occurrence; of the type OptionFeatures) DEPRECATED This element will be removed in the next FpML major version. Use the "feature" element for option features such as asian, barrier, knock.

### 1.5.3 Used by:

- Complex type: EquityForward
- Complex type: EquityOption

### 1.5.4 Derived Types:

- Complex type: EquityForward
- Complex type: EquityOption

### 1.5.5 Figure:

### 1.5.6 Schema Fragment:

## 1.7 EquityEuropeanExercise

### 1.7.1 Description:

A type for defining exercise procedures associated with a European style exercise of an equity option.

### 1.7.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type Exercise)

- The abstract base class for all types which define way in which options may be exercised.

**expirationDate** (exactly one occurrence; of the type AdjustableOrRelativeDate) The last day within an exercise period for an American style option. For a European style option it is the only day within the exercise period.

**equityExpirationTimeType** (exactly one occurrence; of the type TimeTypeEnum) The time of day at which the equity option expires, for example the official closing time of the exchange.

**equityExpirationTime** (zero or one occurrence; of the type BusinessCenterTime) The specific time of day at which the equity option expires.

### 1.7.3 Used by:

- Complex type: EquityExerciseValuationSettlement

### 1.7.4 Derived Types:

### 1.7.5 Figure:

### 1.7.6 Schema Fragment:

## 1.8 EquityExerciseValuationSettlement

### 1.8.1 Description:

A type for defining exercise procedures for equity options.

### 1.8.2 Contents:

Either

**equityEuropeanExercise** (exactly one occurrence; of the type EquityEuropeanExercise) The parameters for defining the expiration date and time for a European style equity option

Or

**equityAmericanExercise** (exactly one occurrence; of the type EquityAmericanExercise) The parameters for defining the exercise period for an American style equity option together with the rules governing the quantity of the underlying that can be exercised on any given exercise date.

Or

**equityBermudaExercise** (exactly one occurrence; of the type EquityBermudaExercise) The parameters for defining the exercise period for an Bermuda style equity option together with the rules governing the quantity of the underlying that can be exercised on any given exercise date.

Either

**prePayment** (exactly one occurrence; of the type PrePayment) Prepayment features for Forward.

**equityValuation** (exactly one occurrence; of the type EquityValuation) The parameters for defining when valuation of the underlying takes place.

**settlementDate** (zero or one occurrence; of the type AdjustableOrRelativeDate) Date on which settlement of option premiums will occur.

**settlementCurrency** (exactly one occurrence; of the type Currency) The currency in which a cash settlement for non-deliverable forward and non-deliverable options.

**settlementPriceSource** (zero or one occurrence; of the type SettlementPriceSource)

**settlementType** (exactly one occurrence; of the type SettlementTypeEnum) How the option will be settled.

**settlementMethodElectionDate** (zero or one occurrence; of the type AdjustableOrRelativeDate)

**settlementMethodElectingPartyReference** (zero or one occurrence; of the type PartyReference)

## 1.9 EquityForward

### 1.9.1 Description:

A type for defining equity forwards.

### 1.9.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type EquityDerivativeLongFormBase)

- type for defining the common features of equity derivatives.

**forwardPrice** (zero or one occurrence; of the type Money) The forward price per share, index or basket.

### 1.9.3 Used by:

- Element: equityForward

### 1.9.4 Derived Types:

### 1.9.5 Figure:

### 1.9.6 Schema Fragment:

```
<xsd:complexType name="EquityForward">

    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

## 1.10 EquityMultipleExercise

### 1.10.1 Description:

A type for defining the multiple exercise provisions of an American or Bermuda style equity option.

### 1.10.2 Contents:

**integralMultipleExercise** (zero or one occurrence; of the type PositiveDecimal) When multiple exercise is applicable and this element is present it specifies that the number of options that can be exercised on a given exercise date must either be equal to the value of this element or be an integral multiple of it.

**minimumNumberOfOptions** (exactly one occurrence; of the type PositiveDecimal) When multiple exercise is applicable this element specifies the minimum number of options that can be exercised on a given exercise date. If this element is not present then the minimum number is deemed to be 1. Its value can be a fractional number as a result of corporate actions.

**maximumNumberOfOptions** (exactly one occurrence; of the type PositiveDecimal) When multiple exercise is applicable this element specifies the maximum number of options that can be exercised on a given exercise date. If this element is not present then the maximum number is deemed to be the same as the number of options. Its value can be a fractional number as a result of corporate actions.

### 1.10.3 Used by:

- Complex type: EquityAmericanExercise
- Complex type: EquityBermudaExercise

## 1.11 EquityOption

### 1.11.1 Description:

A type for defining equity options.

### 1.11.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type EquityDerivativeLongFormBase)

- type for defining the common features of equity derivatives.

**strike** (zero or one occurrence; of the type EquityStrike) Defines whether it is a price or level at which the option has been, or will be, struck.

**spotPrice** (zero or one occurrence; of the type NonNegativeDecimal) The price per share, index or basket observed on the trade or effective date.

**numberOfOptions** (zero or one occurrence; of the type PositiveDecimal) The number of options comprised in the option transaction.

**optionEntitlement** (exactly one occurrence; of the type PositiveDecimal) The number of shares per option comprised in the option transaction.

**equityPremium** (exactly one occurrence; of the type EquityPremium) The equity option premium payable by the buyer to the seller.

### 1.11.3 Used by:

- Element: equityOption

### 1.11.4 Derived Types:

### 1.11.5 Figure:

### 1.11.6 Schema Fragment:

## 1.13 EquityOptionTransactionSupplement

### 1.13.1 Description:

A type for defining equity option transaction supplements

### 1.13.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type EquityDerivativeShortFormBase)

- A type for defining short form equity option basic features

**exchangeLookAlike** (zero or one occurrence; of the type xsd:boolean) For a share option transaction, a flag used to indicate whether the transaction is to be treated as an 'exchange look-alike'. This designation has significance for how share adjustments (arising from corporate actions) will be determined for the transaction. For an 'exchange look-alike' transaction the relevant share adjustments will follow that for a corresponding designated contract listed on the related exchange (referred to as Options Exchange Adjustment (ISDA defined term), otherwise the share adjustments will be determined by the calculation agent (referred to as Calculation Agent Adjustment (ISDA defined term)).

**exchangeTradedContractNearest** (zero or one occurrence; of the type xsd:boolean) For an index option transaction, a flag used in conjunction with Futures Price Valuation (ISDA defined term) to indicate whether the Nearest Index Contract provision is applicable. The Nearest Index Contract provision is a rule for determining the Exchange-traded Contract (ISDA defined term) without having to explicitly state the actual contract, delivery month and exchange on which it is traded.

**multipleExchangeIndexAnnexFallback** (zero or one occurrence; of the type xsd:boolean) For an index option transaction, a flag to indicate whether a relevant Multiple Exchange Index Annex is applicable to the transaction. This annex defines additional provisions which are applicable where an index is comprised of component securities that are traded on multiple exchanges.

**methodOfAdjustment** (zero or one occurrence; of the type MethodOfAdjustmentEnum)

**localJurisdiction** (zero or one occurrence; of the type Country) Local Jurisdiction is a term used in the AEJ Master Confirmation, which is used to determine local taxes, which shall mean taxes, duties, and similar charges imposed by the taxing authority of the Local Jurisdiction If this element is not present Local Jurisdiction is Not Applicable.

Either

**optionEntitlement** (exactly one occurrence; of the type PositiveDecimal) The number of shares per option comprised in the option transaction supplement.

Or

**multiplier** (exactly one occurrence; of the type PositiveDecimal) Specifies the contract multiplier that can be associated with an index option.

## 1.14 PrePayment

### 1.14.1 Description:

A type for defining PrePayment.

### 1.14.2 Contents:

**payerPartyReference** (exactly one occurrence; of the type PartyOrAccountReference) A reference to the party responsible for making the payments defined by this structure.

**receiverPartyReference** (exactly one occurrence; of the type PartyOrAccountReference) A reference to the party that receives the payments corresponding to this structure.

**prePayment** (exactly one occurrence; of the type xsd:boolean)

**prePaymentAmount** (exactly one occurrence; of the type Money)

**prePaymentDate** (exactly one occurrence; of the type AdjustableDate)

### 1.14.3 Used by:

- Complex type: EquityExerciseValuationSettlement

### 1.14.4 Derived Types:

### 1.14.5 Figure:

### 1.14.6 Schema Fragment:

## ***2 Global Elements***

## 2.1 brokerEquityOption

### 2.1.1 Description:

A component describing a Broker View of an Equity Option.

### 2.1.2 Contents:

Element brokerEquityOption is defined by the complex type BrokerEquityOption

### 2.1.3 Used by:

### 2.1.4 Substituted by:

### 2.1.5 Figure:

### 2.1.6 Schema Fragment:

```
<xsd:element name="brokerEquityOption" type="BrokerEquityOption" substitutionGroup="product">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A component describing a Broker View of an Equity Option.
    </xsd:documentation>
  </xsd:annotation>
</xsd:element>
```

## 2.2 equityForward

### 2.2.1 Description:

A component describing an Equity Forward product.

### 2.2.2 Contents:

Element equityForward is defined by the complex type EquityForward

### 2.2.3 Used by:

### 2.2.4 Substituted by:

### 2.2.5 Figure:

### 2.2.6 Schema Fragment:

```
<xsd:element name="equityForward" type="EquityForward" substitutionGroup="product">

# ***1 Global Complex Types***

## 1.1 AdditionalDisruptionEvents

### 1.1.1 Description:

A type for defining ISDA 2002 Equity Derivative Additional Disruption Events

### 1.1.2 Contents:

**changeInLaw** (exactly one occurrence; of the type xsd:boolean) If true, then change in law is applicable

**failureToDeliver** (zero or one occurrence; of the type xsd:boolean) Where the underlying is shares and the transaction is physically settled, then, if true, a failure to deliver the shares on the settlement date will not be an event of default for the purposes of the master agreement.

**insolvencyFiling** (exactly one occurrence; of the type xsd:boolean) If true, then insolvency filing is applicable

**hedgingDisruption** (exactly one occurrence; of the type xsd:boolean) If true, then hedging disruption is applicable

**lossOfStockBorrow** (exactly one occurrence; of the type xsd:boolean) If true, then loss of stock borrow is applicable

**increasedCostOfStockBorrow** (exactly one occurrence; of the type xsd:boolean) If true, then increased cost of stock borrow is applicable

**increasedCostOfHedging** (exactly one occurrence; of the type xsd:boolean) If true, then increased cost of hedging is applicable

**determiningPartyReference** (exactly one occurrence; of the type PartyReference) A reference to the party which determines additional disruption events

### 1.1.3 Used by:

- Complex type: ExtraordinaryEvents

### 1.1.4 Derived Types:

### 1.1.5 Figure:

### 1.1.6 Schema Fragment:

## 1.2 AdditionalPaymentAmount

### 1.2.1 Description:

Specifies the amount of the fee along with, when applicable, the formula that supports its determination.

### 1.2.2 Contents:

**paymentAmount** (zero or one occurrence; of the type Money) The currency amount of the payment.

**formula** (zero or one occurrence; of the type Formula) Specifies a formula, with its description and components.

### 1.2.3 Used by:

- Complex type: ReturnSwapAdditionalPayment

### 1.2.4 Derived Types:

### 1.2.5 Figure:

### 1.2.6 Schema Fragment:

    </xsd:element>
  </xsd:sequence>
</xsd:complexType>
```

## 1.3 AdjustableDateOrRelativeDateSequence

### 1.3.1 Description:

A type describing a date defined as subject to adjustment or defined in reference to another date through one or several date offsets.

### 1.3.2 Contents:

Either

**adjustableDate** (exactly one occurrence; of the type AdjustableDate) A date that shall be subject to adjustment if it would otherwise fall on a day that is not a business day in the specified business centers, together with the convention for adjusting the date.

Or

**relativeDateSequence** (exactly one occurrence; of the type RelativeDateSequence) A date specified in relation to some other date defined in the document (the anchor date), where there is the opportunity to specify a combination of offset rules. This component will typically be used for defining the valuation date in relation to the payment date, as both the currency and the exchange holiday calendars need to be considered.

### 1.3.3 Used by:

- Complex type: EquityValuation

### 1.3.4 Derived Types:

### 1.3.5 Figure:

### 1.3.6 Schema Fragment:

```
<xsd:complexType name="AdjustableDateOrRelativeDateSequence">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A type describing a date defined as subject to adjustment or
      defined in reference to another date through one or several date
      offsets.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:choice>
    <xsd:element name="adjustableDate" type="AdjustableDate">
      <xsd:annotation>

    </xsd:element>
  </xsd:choice>
  <xsd:attribute name="id" type="xsd:ID"/>
</xsd:complexType>
```

## 1.4 BoundedCorrelation

### 1.4.1 Description:

A type describing correlation bounds, which form a cap and a floor on the realized correlation.

### 1.4.2 Contents:

**minimumBoundaryPercent** (zero or one occurrence; of the type xsd:decimal) Minimum Boundary as a percentage of the Strike Price.

**maximumBoundaryPercent** (zero or one occurrence; of the type xsd:decimal) Maximum Boundary as a percentage of the Strike Price.

### 1.4.3 Used by:

- Complex type: Correlation

### 1.4.4 Derived Types:

### 1.4.5 Figure:

### 1.4.6 Schema Fragment:

```
<xsd:complexType name="BoundedCorrelation">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A type describing correlation bounds, which form a cap and a
      floor on the realized correlation.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:sequence>
    <xsd:element name="minimumBoundaryPercent" type="xsd:decimal" minOccurs="0">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          Minimum Boundary as a percentage of the Strike Price.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
    <xsd:element name="maximumBoundaryPercent" type="xsd:decimal" minOccurs="0">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          Maximum Boundary as a percentage of the Strike Price.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
  </xsd:sequence>
</xsd:complexType>
```

## 1.5 BoundedVariance

### 1.5.1 Description:

A type describing variance bounds, which are used to exclude money price values outside of the specified range In a Up Conditional Swap Underlyer price must be equal to or higher than Lower Barrier In a Down Conditional Swap Underlyer price must be equal to or lower than Upper Barrier In a Corridor Conditional Swap Underlyer price must be equal to or higher than Lower Barrier and must be equal to or lower than Upper Barrier.

### 1.5.2 Contents:

**realisedVarianceMethod** (exactly one occurrence; of the type RealisedVarianceMethodEnum) The contract specifies whether which price must satisfy the boundary condition.

**daysInRangeAdjustment** (exactly one occurrence; of the type xsd:boolean) The contract specifies whether the notional should be scaled by the Number of Days in Range divided by the Expected N. The number of Days in Ranges refers to the number of returns that contribute to the realized volatility.

**upperBarrier** (zero or one occurrence; of the type NonNegativeDecimal) All observations above this price level will be excluded from the variance calculation.

**lowerBarrier** (zero or one occurrence; of the type NonNegativeDecimal) All observations below this price level will be excluded from the variance calculation.

### 1.5.3 Used by:

- Complex type: Variance

### 1.5.4 Derived Types:

### 1.5.5 Figure:

### 1.5.6 Schema Fragment:

## 1.6 CalculatedAmount

### 1.6.1 Description:

An abstract base class for all calculated money amounts, which are in the currency of the cash multiplier of the calculation.

### 1.6.2 Contents:

**calculationDates** (zero or one occurrence; of the type AdjustableRelativeOrPeriodicDates) Specifies the date on which a calculation or an observation will be performed for the purpose of calculating the amount.

**observationStartDate** (zero or one occurrence; of the type AdjustableOrRelativeDate) The start of the period over which observations are made which are used in the calculation Used when the observation start date differs from the trade date such as for forward starting swaps.

**optionsExchangeDividends** (zero or one occurrence; of the type xsd:boolean) If present and true, then options exchange dividends are applicable.

**additionalDividends** (zero or one occurrence; of the type xsd:boolean) If present and true, then additional dividends are applicable.

**allDividends** (zero or one occurrence; of the type xsd:boolean) Represents the European Master Confirmation value of 'All Dividends' which, when applicable, signifies that, for a given Ex-Date, the daily observed Share Price for that day is adjusted (reduced) by the cash dividend and/or the cash value of any non cash dividend per Share (including Extraordinary Dividends) declared by the Issuer.

### 1.6.3 Used by:

- Complex type: CorrelationAmount
- Complex type: VarianceAmount

### 1.6.4 Derived Types:

- Complex type: CorrelationAmount
- Complex type: VarianceAmount

### 1.6.5 Figure:

### 1.6.6 Schema Fragment:

## 1.7 CalculationFromObservation

### 1.7.1 Description:

Abstract base class for all calculation from observed values

### 1.7.2 Contents:

Either

**initialLevel** (exactly one occurrence; of the type xsd:decimal) Contract will strike off this initial level

Or

**closingLevel** (exactly one occurrence; of the type xsd:boolean) If true this contract will strike off the closing level of the default exchange traded contract

Or

**expiringLevel** (exactly one occurrence; of the type xsd:boolean) If true this contract will strike off the expiring level of the default exchange traded contract

**expectedN** (zero or one occurrence; of the type xsd:positiveInteger) Expected number of trading days

### 1.7.3 Used by:

- Complex type: Correlation
- Complex type: Variance

### 1.7.4 Derived Types:

- Complex type: Correlation
- Complex type: Variance

### 1.7.5 Figure:

### 1.7.6 Schema Fragment:

## 1.8 Compounding

### 1.8.1 Description:

Specifies the compounding method and the compounding rate.

### 1.8.2 Contents:

**compoundingMethod** (exactly one occurrence; of the type CompoundingMethodEnum) If more than one calculation period contributes to a single payment amount this element specifies whether compounding is applicable, and if so, what compounding method is to be used. This element must only be included when more than one calculation period contributes to a single payment amount.

**compoundingRate** (exactly one occurrence; of the type CompoundingRate) Defines a compounding rate. The compounding interest can either point back to the interest calculation node on the Interest Leg, or be defined specifically.

### 1.8.3 Used by:

- Complex type: InterestCalculation

### 1.8.4 Derived Types:

### 1.8.5 Figure:

### 1.8.6 Schema Fragment:

## 1.9 CompoundingRate

### 1.9.1 Description:

A type defining a compounding rate. The compounding interest can either point back to the interest calculation node on the Interest Leg, or be defined specifically.

### 1.9.2 Contents:

Either

**interestLegRate** (exactly one occurrence; of the type InterestCalculationReference) Reference to the interest calculation node on the Interest Leg.

Or

**specificRate** (exactly one occurrence; of the type InterestAccrualsMethod) Defines a specific rate.

### 1.9.3 Used by:

## 1.10 Correlation

### 1.10.1 Description:

A type describing the correlation amount of a correlation swap

### 1.10.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type CalculationFromObservation)

- Abstract base class for all calculation from observed values

**notionalAmount** (exactly one occurrence; of the type Money) Notional amount, which is a cash multiplier

**correlationStrikePrice** (exactly one occurrence; of the type CorrelationValue) Correlation Strike Price

**boundedCorrelation** (zero or one occurrence; of the type BoundedCorrelation) Bounded Correlation

**numberOfDataSeries** (zero or one occurrence; of the type xsd:positiveInteger) Number of data series, normal market practice is that correlation data sets are drawn from geographic market areas, such as America, Europe and Asia Pacific, each of these geographic areas will have its own data series to avoid contagion

### 1.10.3 Used by:

- Complex type: CorrelationAmount

### 1.10.4 Derived Types:

### 1.10.5 Figure:

### 1.10.6 Schema Fragment:

## 1.11 DeprecatedVariance

### 1.11.1 Description:

DEPRECATED This type will be removed in the next FpML major version. A type describing the variance amount of a variance swap.

### 1.11.2 Contents:

Either

**initialLevel** (exactly one occurrence; of the type xsd:decimal)

Or

**closingLevel** (exactly one occurrence; of the type xsd:boolean)

**varianceAmount** (exactly one occurrence; of the type Money)

Either

**volatilityStrikePrice** (exactly one occurrence; of the type xsd:decimal)

Or

**varianceStrikePrice** (exactly one occurrence; of the type xsd:decimal)

**expectedN** (zero or one occurrence; of the type xsd:integer)

**varianceCap** (zero or one occurrence; of the type xsd:boolean)

**unadjustedVarianceCap** (zero or one occurrence; of the type xsd:decimal) For use when varianceCap is applicable. Contains the scaling factor of the Variance Cap that can differ on a trade-by-trade basis in the European market. For example, a Variance Cap of  $2.5^2 \times$  Variance Strike Price has an unadjustedVarianceCap of 2.5.

**exchangeTradedContractNearest** (zero or one occurrence; of the type ExchangeTradedContract)

**vegaNotionalAmount** (zero or one occurrence; of the type xsd:decimal) Vega Notional represents the approximate gain/loss at maturity for a 1% difference between RVol (realised vol) and KVol (strike vol). It does not necessarily represent the Vega Risk of the trade.

### 1.11.3 Used by:

## 1.12 DeprecatedVarianceAmount

### 1.12.1 Description:

DEPRECATED This type will be removed in the next FpML major version. Return Swap model should not be used for Variance Swaps, use the Variance Swap Product. Specifies, in relation to each Equity Payment Date, the amount to which the Equity Payment Date relates for Variance Swaps. Unless otherwise specified, this term has the meaning defined in the ISDA 2002 Equity Derivatives Definitions.

### 1.12.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type ReturnSwapAmount)

- Specifies, in relation to each Payment Date, the amount to which the Payment Date relates. For Equity Swaps this element is equivalent to the Equity Amount term as defined in the ISDA 2002 Equity Derivatives Definitions.

**cashSettlementPaymentDate** (zero or one occurrence; of the type AdjustableOrRelativeDate) Typically specified as a number of days following the valuation date, such as one settlement cycle following the valuation date. Number of days can vary in the European market.

**observationStartDate** (zero or one occurrence; of the type StartingDate) The start of the period over which observations are made to determine the variance. Used when the date differs from the trade date such as for forward starting variance swaps.

**allDividends** (zero or one occurrence; of the type xsd:boolean) Represents the European Master Confirmation value of "All Dividends" which, when applicable, signifies that, for a given Ex-Date, the daily observed Share Price for that day is adjusted (reduced) by the cash dividend and/or the cash value of any non cash dividend per Share (including Extraordinary Dividends) declared by the Issuer.

## 1.13 DeprecatedVarianceLeg

### 1.13.1 Description:

DEPRECATED This type will be removed in the next FpML major version. Return Swap model should not be used for Variance Swaps, use the Variance Swap Product. A type describing the variance leg of the return swap.

### 1.13.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type ReturnSwapLeg)

- The abstract base class for all types of Return Swap Leg.

**underlyer** (exactly one occurrence; of the type Underlyer) Specifies the underlyer of the leg.

**equityValuation** (exactly one occurrence; of the type EquityValuation) Valuation of the underlyer.

**equityAmount** (exactly one occurrence; of the type DeprecatedVarianceAmount) Specifies, in relation to each Equity Payment Date, the amount to which the Equity Payment Date relates. Unless otherwise specified, this term has the meaning defined in the ISDA 2002 Equity Derivatives Definitions.

### 1.13.3 Used by:

## 1.14 DirectionalLeg

### 1.14.1 Description:

An abstract base class for all directional leg types with effective date, termination date, where a payer makes a stream of payments of greater than zero value to a receiver.

### 1.14.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type Leg)

- A supertype of leg. All swap legs extend this type.

**payerPartyReference** (exactly one occurrence; of the type PartyOrAccountReference) A reference to the party responsible for making the payments defined by this structure.

**receiverPartyReference** (exactly one occurrence; of the type PartyOrAccountReference) A reference to the party that receives the payments corresponding to this structure.

**effectiveDate** (zero or one occurrence; of the type AdjustableOrRelativeDate) Specifies the effective date of this leg of the swap. When defined in relation to a date specified somewhere else in the document (through the relativeDate component), this element will typically point to the effective date of the other leg of the swap.

**terminationDate** (zero or one occurrence; of the type AdjustableOrRelativeDate) Specifies the termination date of this leg of the swap. When defined in relation to a date specified somewhere else in the document (through the relativeDate component), this element will typically point to the termination date of the other leg of the swap.

### 1.14.3 Used by:

- Complex type: DirectionalLegUnderlyer
- Complex type: FixedPaymentLeg

### 1.14.4 Derived Types:

- Complex type: DirectionalLegUnderlyer
- Complex type: FixedPaymentLeg

## 1.15 DirectionalLegUnderlyer

### 1.15.1 Description:

An abstract base class for all directional leg types with effective date, termination date, and underlyer where a payer makes a stream of payments of greater than zero value to a receiver.

### 1.15.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type DirectionalLeg)

- An abstract base class for all directional leg types with effective date, termination date, where a payer makes a stream of payments of greater than zero value to a receiver.

**underlyer** (exactly one occurrence; of the type Underlyer) Specifies the underlyer of the leg.

**settlementType** (exactly one occurrence; of the type SettlementTypeEnum)

**settlementDate** (zero or one occurrence; of the type AdjustableOrRelativeDate)

**fxFeature** (zero or one occurrence; of the type FxFeature) Quanto, Composite, or Cross Currency FX features.

### 1.15.3 Used by:

- Complex type: DirectionalLegUnderlyerValuation
- Complex type: DividendLeg

### 1.15.4 Derived Types:

- Complex type: DirectionalLegUnderlyerValuation
- Complex type: DividendLeg

### 1.15.5 Figure:

        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
  </xsd:sequence>
</xsd:complexType>
```

## 1.18 DividendPeriod

### 1.18.1 Description:

Abstract base class of all time bounded dividend period types.

### 1.18.2 Contents:

**unadjustedStartDate** (exactly one occurrence; of the type IdentifiedDate) Unadjusted inclusive dividend period start date.

**unadjustedEndDate** (exactly one occurrence; of the type IdentifiedDate) Unadjusted inclusive dividend period end date.

**dateAdjustments** (exactly one occurrence; of the type BusinessDayAdjustments) Date adjustments for all unadjusted dates in this dividend period.

**underlyerReference** (zero or one occurrence; of the type AssetReference) Reference to the underlyer which is paying dividends. This should be used in all cases, and must be used where there are multiple underlying assets, to avoid any ambiguity about which asset the dividend period relates to.

### 1.18.3 Used by:

- Complex type: DividendPeriodDividend
- Complex type: DividendPeriodPayment

### 1.18.4 Derived Types:

- Complex type: DividendPeriodDividend
- Complex type: DividendPeriodPayment

### 1.18.5 Figure:

## 1.19 DividendPeriodDividend

### 1.19.1 Description:

A time bounded dividend period, with an expected dividend for each period.

### 1.19.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type DividendPeriod)

- Abstract base class of all time bounded dividend period types.

**dividend** (exactly one occurrence; of the type Money) Expected dividend in this period.

**multiplier** (exactly one occurrence; of the type PositiveDecimal) Multiplier is a percentage value which is used to produce Deviation by multiplying the difference between Expected Dividend and Actual Dividend Deviation = Multiplier \* (Expected Dividend — Actual Dividend).

### 1.19.3 Used by:

- Complex type: DividendAdjustment

### 1.19.4 Derived Types:

### 1.19.5 Figure:

### 1.19.6 Schema Fragment:

```
<xsd:complexType name="DividendPeriodDividend">

        </xsd:element>
      </xsd:sequence>
    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

## 1.20 EquityCorporateEvents

### 1.20.1 Description:

A type for defining the merger events and their treatment.

### 1.20.2 Contents:

**shareForShare** (exactly one occurrence; of the type ShareExtraordinaryEventEnum) The consideration paid for the original shares following the Merger Event consists wholly of new shares.

**shareForOther** (exactly one occurrence; of the type ShareExtraordinaryEventEnum) The consideration paid for the original shares following the Merger Event consists wholly of cash/securities other than new shares.

**shareForCombined** (exactly one occurrence; of the type ShareExtraordinaryEventEnum) The consideration paid for the original shares following the Merger Event consists of both cash/securities and new shares.

### 1.20.3 Used by:

- Complex type: ExtraordinaryEvents

### 1.20.4 Derived Types:

### 1.20.5 Figure:

### 1.20.6 Schema Fragment:

    </xsd:element>
  </xsd:sequence>
</xsd:complexType>
```

## 1.21 EquityPremium

### 1.21.1 Description:

A type used to describe the amount paid for an equity option.

### 1.21.2 Contents:

**payerPartyReference** (exactly one occurrence; of the type PartyOrAccountReference) A reference to the party responsible for making the payments defined by this structure.

**receiverPartyReference** (exactly one occurrence; of the type PartyOrAccountReference) A reference to the party that receives the payments corresponding to this structure.

**premiumType** (zero or one occurrence; of the type PremiumTypeEnum) Forward start Premium type

**paymentAmount** (zero or one occurrence; of the type Money) The currency amount of the payment.

**paymentDate** (zero or one occurrence; of the type AdjustableDate) The payment date. This date is subject to adjustment in accordance with any applicable business day convention.

**swapPremium** (zero or one occurrence; of the type xsd:boolean) Specifies whether or not the premium is to be paid in the style of payments under an interest rate swap contract.

**pricePerOption** (zero or one occurrence; of the type Money) The amount of premium to be paid expressed as a function of the number of options.

**percentageOfNotional** (zero or one occurrence; of the type xsd:decimal) The amount of premium to be paid expressed as a percentage of the notional value of the transaction. A percentage of 5% would be expressed as 0.05.

### 1.21.3 Used by:

## 1.22 EquityStrike

### 1.22.1 Description:

A type for defining the strike price for an equity option. The strike price is either: (i) in respect of an index option transaction, the level of the relevant index specified or otherwise determined in the transaction; or (ii) in respect of a share option transaction, the price per share specified or otherwise determined in the transaction. This can be expressed either as a percentage of notional amount or as an absolute value.

### 1.22.2 Contents:

Either

**strikePrice** (exactly one occurrence; of the type xsd:decimal) The price or level at which the option has been struck.

**currency** (zero or one occurrence; of the type Currency) The currency in which an amount is denominated.

### 1.22.3 Used by:

- Complex type: EquityDerivativeShortFormBase
- Complex type: EquityOption

### 1.22.4 Derived Types:

### 1.22.5 Figure:

## 1.23 EquityValuation

### 1.23.1 Description:

A type for defining how and when an equity option is to be valued.

### 1.23.2 Contents:

Either

**valuationDate** (exactly one occurrence; of the type AdjustableDateOrRelativeDateSequence) The term "Valuation Date" is assumed to have the meaning as defined in the ISDA 2002 Equity Derivatives Definitions.

Or

**valuationDates** (exactly one occurrence; of the type AdjustableRelativeOrPeriodicDates) Specifies the interim equity valuation dates of the swap.

**valuationTimeType** (zero or one occurrence; of the type TimeTypeEnum) The time of day at which the calculation agent values the underlying, for example the official closing time of the exchange.

**valuationTime** (zero or one occurrence; of the type BusinessCenterTime) The specific time of day at which the calculation agent values the underlying.

**futuresPriceValuation** (zero or one occurrence; of the type xsd:boolean) The official settlement price as announced by the related exchange is applicable, in accordance with the ISDA 2002 definitions.

**optionsPriceValuation** (zero or one occurrence; of the type xsd:boolean) The official settlement price as announced by the related exchange is applicable, in accordance with the ISDA 2002 definitions.

## 1.24 ExtraordinaryEvents

### 1.24.1 Description:

Where the underlying is shares, defines market events affecting the issuer of those shares that may require the terms of the transaction to be adjusted.

### 1.24.2 Contents:

**mergerEvents** (zero or one occurrence; of the type EquityCorporateEvents) Occurs when the underlying ceases to exist following a merger between the Issuer and another company.

**tenderOffer** (zero or one occurrence; of the type xsd:boolean) If present and true, then tender offer is applicable.

**tenderOfferEvents** (zero or one occurrence; of the type EquityCorporateEvents) ISDA 2002 Equity Tender Offer Events.

**compositionOfCombinedConsideration** (zero or one occurrence; of the type xsd:boolean) If present and true, then composition of combined consideration is applicable.

**indexAdjustmentEvents** (zero or one occurrence; of the type IndexAdjustmentEvents) ISDA 2002 Equity Index Adjustment Events.

Either

**additionalDisruptionEvents** (exactly one occurrence; of the type AdditionalDisruptionEvents) ISDA 2002 Equity Additional Disruption Events.

Or

**failureToDeliver** (exactly one occurrence; of the type xsd:boolean) If true, failure to deliver is applicable.

**representations** (zero or one occurrence; of the type Representations) ISDA 2002 Equity Derivative Representations.

**nationalisationOrInsolvency** (zero or one occurrence; of the type NationalisationOrInsolvencyOrDelistingEventEnum) The terms "Nationalisation" and "Insolvency" have the meaning as defined in the ISDA 2002 Equity Derivatives Definitions.

**delisting** (zero or one occurrence; of the type NationalisationOrInsolvencyOrDelistingEventEnum) The term "Delisting" has the meaning defined in the ISDA 2002 Equity Derivatives Definitions.

## 1.26 InterestCalculation

### 1.26.1 Description:

Specifies the calculation method of the interest rate leg of the equity swap. Includes the floating or fixed rate calculation definitions, along with the determination of the day count fraction.

### 1.26.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type InterestAccrualsMethod)

- A type describing the method for accruing interests on dividends. Can be either a fixed rate reference or a floating rate reference.

**dayCountFraction** (exactly one occurrence; of the type DayCountFraction) The day count fraction.

**compounding** (zero or one occurrence; of the type Compounding) Defines compounding rates on the Interest Leg.

### 1.26.3 Used by:

- Complex type: InterestLeg

### 1.26.4 Derived Types:

### 1.26.5 Figure:

### 1.26.6 Schema Fragment:

## 1.28 InterestLeg

### 1.28.1 Description:

A type describing the fixed income leg of the equity swap.

### 1.28.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type ReturnSwapLeg)

- The abstract base class for all types of Return Swap Leg.

**interestLegCalculationPeriodDates** (exactly one occurrence; of the type InterestLegCalculationPeriodDates) Component that holds the various dates used to specify the interest leg of the equity swap. It is used to define the InterestPeriodDates identifier.

**notional** (exactly one occurrence; of the type ReturnSwapNotional) Specifies the notional of a return type swap. When used in the equity leg, the definition will typically combine the actual amount (using the notional component defined by the FpML industry group) and the determination method. When used in the interest leg, the definition will typically point to the definition of the equity leg.

**interestAmount** (exactly one occurrence; of the type LegAmount) Specifies, in relation to each Interest Payment Date, the amount to which the Interest Payment Date relates. Unless otherwise specified, this term has the meaning defined in the ISDA 2000 ISDA Definitions.

**interestCalculation** (exactly one occurrence; of the type InterestCalculation) Specifies the calculation method of the interest rate leg of the equity swap. Includes the floating or fixed rate calculation definitions, along with the determination of the day count fraction.

**stubCalculationPeriod** (zero or one occurrence; of the type StubCalculationPeriod) Specifies the stub calculation period

### 1.28.3 Used by:

## 1.29 InterestLegCalculationPeriodDates

### 1.29.1 Description:

Component that holds the various dates used to specify the interest leg of the equity swap. It is used to define the InterestPeriodDates identifier.

### 1.29.2 Contents:

**effectiveDate** (exactly one occurrence; of the type AdjustableOrRelativeDate) Specifies the effective date of the equity swap. This global element is valid within the equity swaps namespace. Within the FpML namespace, another effectiveDate global element has been defined, that is different in the sense that it does not propose the choice of referring to another date in the document.

**terminationDate** (exactly one occurrence; of the type AdjustableOrRelativeDate) Specifies the termination date of the equity swap. This global element is valid within the equity swaps namespace. Within the FpML namespace, another terminationDate global element has been defined, that is different in the sense that it does not propose the choice of referring to another date in the document.

**interestLegResetDates** (exactly one occurrence; of the type InterestLegResetDates) Specifies the reset dates of the interest leg of the swap.

**interestLegPaymentDates** (exactly one occurrence; of the type AdjustableOrRelativeDates) Specifies the payment dates of the interest leg of the swap. When defined in relation to a date specified somewhere else in the document (through the relativeDates component), this element will typically point to the payment dates of the equity leg of the swap.

### 1.29.3 Used by:

- Complex type: InterestLeg

### 1.29.4 Derived Types:

</xsd:complexType>
```

## 1.31 InterestLegResetDates

### 1.31.1 Description:

### 1.31.2 Contents:

**calculationPeriodDatesReference** (exactly one occurrence; of the type InterestLegCalculationPeriodDatesReference) A pointer style reference to the associated calculation period dates component defined elsewhere in the document.

Either

**resetRelativeTo** (exactly one occurrence; of the type ResetRelativeToEnum) Specifies whether the reset dates are determined with respect to each adjusted calculation period start date or adjusted calculation period end date. If the reset frequency is specified as daily this element must not be included.

Or

**resetFrequency** (exactly one occurrence; of the type ResetFrequency) The frequency at which reset dates occur. In the case of a weekly reset frequency, also specifies the day of the week that the reset occurs. If the reset frequency is greater than the calculation period frequency then this implies that more than one reset date is established for each calculation period and some form of rate averaging is applicable.

**initialFixingDate** (zero or one occurrence; of the type RelativeDateOffset) Initial fixing date expressed as an offset to another date defined elsewhere in the document.

**fixingDates** (zero or one occurrence; of the type AdjustableDatesOrRelativeDateOffset) Specifies the fixing date relative to the reset date in terms of a business days offset, or by providing a series of adjustable dates

### 1.31.3 Used by:

## 1.32 LegAmount

### 1.32.1 Description:

A type describing the amount that will be paid or received on each of the payment dates. This type is used to define both the Equity Amount and the Interest Amount.

### 1.32.2 Contents:

Either

**currency** (exactly one occurrence; of the type Currency) The currency in which an amount is denominated.

Or

**determinationMethod** (exactly one occurrence; of the type DeterminationMethod) Specifies the method according to which an amount or a date is determined.

Or

**currencyReference** (exactly one occurrence; of the type IdentifiedCurrencyReference) The currency in which an amount is denominated.

**paymentCurrency** (zero or one occurrence; of the type PaymentCurrency) Currency in which the payment relating to the leg amount (equity amount or interest amount) or the dividend will be denominated.

Either

**referenceAmount** (exactly one occurrence; of the type ReferenceAmount) Specifies the reference Amount when this term either corresponds to the standard ISDA Definition (either the 2002 Equity Definition for the Equity Amount, or the 2000 Definition for the Interest Amount), or points to a term defined elsewhere in the swap document.

Or

**formula** (exactly one occurrence; of the type Formula) Specifies a formula, with its description and components.

Or

**encodedDescription** (exactly one occurrence; of the type xsd:base64Binary) Description of the leg amount when represented through an encoded image.

Or

**variance** (exactly one occurrence; of the type DeprecatedVariance) DEPRECATED This element will be removed in the next FpML major version. Return Swap model should not be used for Variance Swaps, use the Variance Swap Product. Specifies Variance for Variance Leg.

**calculationDates** (zero or one occurrence; of the type AdjustableRelativeOrPeriodicDates) Specifies the date on which a calculation or an observation will be performed for the purpose of defining the Equity Amount, and in accordance to the definition terms of this latter.

### 1.32.3 Used by:

- Complex type: ReturnSwapAmount

## 1.33 MakeWholeProvisions

### 1.33.1 Description:

### 1.33.2 Contents:

**makeWholeDate** (exactly one occurrence; of the type xsd:date) Date through which option can not be exercised without penalty.

**recallSpread** (exactly one occurrence; of the type xsd:decimal) Spread used if exercised before make whole date. Early termination penalty. Expressed in bp, e.g. 25 bp.

### 1.33.3 Used by:

- Complex type: EquityExerciseValuationSettlement

### 1.33.4 Derived Types:

### 1.33.5 Figure:

## 1.34 NettedSwapBase

### 1.34.1 Description:

An abstract base class for all swap types which have a single netted leg, such as Variance Swaps, and Correlation Swaps.

### 1.34.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type Product)

- The base type which all FpML products extend.

**additionalPayment** (zero or more occurrences; of the type ClassifiedPayment) Specifies additional payment(s) between the principal parties to the netted swap.

**extraordinaryEvents** (zero or one occurrence; of the type ExtraordinaryEvents) Where the underlying is shares, specifies events affecting the issuer of those shares that may require the terms of the transaction to be adjusted.

### 1.34.3 Used by:

- Complex type: CorrelationSwap
- Complex type: VarianceSwap

### 1.34.4 Derived Types:

- Complex type: CorrelationSwap
- Complex type: VarianceSwap

### 1.34.5 Figure:

</xsd:complexType>
```

## 1.35 OptionFeatures

### 1.35.1 Description:

A type for defining option features.

### 1.35.2 Contents:

**asian** (zero or one occurrence; of the type Asian) An option where and average price is taken on valuation.

**barrier** (zero or one occurrence; of the type Barrier) An option with a barrier feature.

**knock** (zero or one occurrence; of the type Knock) A knock feature.

**passThrough** (zero or one occurrence; of the type PassThrough) Pass through payments from the underlying, such as dividends.

**dividendAdjustment** (zero or one occurrence; of the type DividendAdjustment) Dividend adjustment of the contract is driven by the difference between the Expected Dividend, and the Actual Dividend, which is multiplied by an agreed Factor to produce a Deviation, which is used as the basis for adjusting the contract. The parties acknowledge that in determining the Call Strike Price of the Transaction the parties have assumed that the Dividend scheduled to be paid by the Issuer to holders of record of the Shares, in the period set out in Column headed Relevant Period will equal per Share the amount stated in respect of such Relevant Period.

## 1.36 PrincipalExchangeAmount

### 1.36.1 Description:

Specifies the principal exchange amount, either by explicitly defining it, or by point to an amount defined somewhere else in the swap document.

### 1.36.2 Contents:

Either

**amountRelativeTo** (exactly one occurrence; of the type AmountReference) Reference to an amount defined elsewhere in the document.

Or

**determinationMethod** (exactly one occurrence; of the type DeterminationMethod) Specifies the method according to which an amount or a date is determined.

Or

**principalAmount** (exactly one occurrence; of the type Money) Principal exchange amount when explicitly stated.

### 1.36.3 Used by:

- Complex type: PrincipalExchangeDescriptions

      </xsd:annotation>
    </xsd:element>
  </xsd:choice>
</xsd:complexType>
```

## 1.37 PrincipalExchangeDescriptions

### 1.37.1 Description:

Specifies each of the characteristics of the principal exchange cashflows, in terms of paying/receiving counterparties, amounts and dates.

### 1.37.2 Contents:

**payerPartyReference** (exactly one occurrence; of the type PartyOrAccountReference) A reference to the party responsible for making the payments defined by this structure.

**receiverPartyReference** (exactly one occurrence; of the type PartyOrAccountReference) A reference to the party that receives the payments corresponding to this structure.

**principalExchangeAmount** (exactly one occurrence; of the type PrincipalExchangeAmount) Specifies the principal exchange amount, either by explicitly defining it, or by point to an amount defined somewhere else in the swap document.

**principalExchangeDate** (zero or one occurrence; of the type AdjustableOrRelativeDate) Date on which each of the principal exchanges will take place. This date is either explicitly stated, or is defined by reference to another date in the swap document. In this latter case, it will typically refer to one other date of the equity leg: either the effective date (initial exchange), or the last payment date (final exchange).

### 1.37.3 Used by:

- Complex type: PrincipalExchangeFeatures

### 1.37.4 Derived Types:

### 1.37.5 Figure:

</xsd:complexType>
```

## 1.38 PrincipalExchangeFeatures

### 1.38.1 Description:

A type describing the principal exchange features of the equity swap.

### 1.38.2 Contents:

**principalExchanges** (zero or one occurrence; of the type PrincipalExchanges) The true/false flags indicating whether initial, intermediate or final exchanges of principal should occur.

**principalExchangeDescriptions** (one or more occurrences; of the type PrincipalExchangeDescriptions) Specifies each of the characteristics of the principal exchange cashflows, in terms of paying/receiving counterparties, amounts and dates.

### 1.38.3 Used by:

</xsd:complexType>
```

## 1.40 Return

### 1.40.1 Description:

A type describing the dividend return conditions applicable to the swap.

### 1.40.2 Contents:

**returnType** (exactly one occurrence; of the type ReturnTypeEnum) Defines the type of return associated with the equity swap.

**dividendConditions** (zero or one occurrence; of the type DividendConditions) Specifies the conditions governing the payment of the dividends to the receiver of the equity return. With the exception of the dividend payout ratio, which is defined for each of the underlying components.

### 1.40.3 Used by:

- Complex type: DeprecatedEquityLeg
- Complex type: ReturnLeg

### 1.40.4 Derived Types:

### 1.40.5 Figure:

### 1.40.6 Schema Fragment:

          dividends to the receiver of the equity return. With the
          exception of the dividend payout ratio, which is defined for
          each of the underlying components.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
  </xsd:sequence>
</xsd:complexType>
```

## 1.41 ReturnLeg

### 1.41.1 Description:

A type describing the return leg of a return type swap.

### 1.41.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type ReturnSwapLegUnderlyer)

- A base class for all return leg types with an underlyer.

**rateOfReturn** (exactly one occurrence; of the type ReturnLegValuation) Element named "valuation" in versions prior to FpML 4.2 Second Working Draft. Specifies the terms of the initial price of the return type swap and of the subsequent valuations of the underlyer.

**notional** (exactly one occurrence; of the type ReturnSwapNotional) Specifies the notional of a return type swap. When used in the equity leg, the definition will typically combine the actual amount (using the notional component defined by the FpML industry group) and the determination method. When used in the interest leg, the definition will typically point to the definition of the equity leg.

**amount** (exactly one occurrence; of the type ReturnSwapAmount) Element named "equityAmount" in versions prior to FpML 4.2 Second Working Draft. Specifies, in relation to each Payment Date, the amount to which the Payment Date relates. For equity swaps this element is equivalent to the Equity Amount term as defined in the ISDA 2002 Equity Derivatives Definitions.

**return** (exactly one occurrence; of the type Return) Specifies the conditions under which dividend affecting the underlyer will be paid to the receiver of the amounts.

**notionalAdjustments** (exactly one occurrence; of the type NotionalAdjustmentEnum) Specifies the conditions that govern the adjustment to the number of units of the equity swap.

**fxFeature** (zero or one occurrence; of the type FxFeature) A quanto or composite FX feature.

## 1.42 ReturnLegValuation

### 1.42.1 Description:

A type describing the initial and final valuation of the underlying.

### 1.42.2 Contents:

**initialPrice** (exactly one occurrence; of the type ReturnLegValuationPrice) Specifies the initial reference price of the underlying. This price can be expressed either as an actual amount/currency, as a determination method, or by reference to another value specified in the swap document.

**notionalReset** (exactly one occurrence; of the type xsd:boolean) Element named "equityNotionalReset" in versions prior to FpML 4.2 Second Working Draft. For equity swaps, this element is equivalent to the term "Equity Notional Reset" as defined in the ISDA 2002 Equity Derivatives Definitions. The reference to the ISDA definition is either "Applicable" or "Inapplicable".

**valuationPriceInterim** (zero or one occurrence; of the type ReturnLegValuationPrice) Specifies the interim valuation price of the underlying. This price can be expressed either as an actual amount/currency, as a determination method, or by reference to another value specified in the swap document.

**valuationPriceFinal** (exactly one occurrence; of the type ReturnLegValuationPrice) Specifies the final valuation price of the underlying. This price can be expressed either as an actual amount/currency, as a determination method, or by reference to another value specified in the swap document.

**paymentDates** (exactly one occurrence; of the type ReturnSwapPaymentDates) Element named "equityPaymentDates" in versions prior to FpML 4.2 Second Working Draft. Specifies the payment dates of the swap.

**exchangeTradedContractNearest** (zero or one occurrence; of the type ExchangeTradedContract) References a Contract on the Exchange.

## 1.43 ReturnLegValuationPrice

### 1.43.1 Description:

### 1.43.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type Price)

- A type describing the strike price.

**valuationRules** (zero or one occurrence; of the type EquityValuation) Element named "equityValuation" in versions prior to FpML 4.2 Second Working Draft.

### 1.43.3 Used by:

- Complex type: ReturnLegValuation

### 1.43.4 Derived Types:

### 1.43.5 Figure:

### 1.43.6 Schema Fragment:

```

## 1.44 ReturnSwap

### 1.44.1 Description:

A type describing return swaps including equity swaps (long form), total return swaps, and variance swaps.

### 1.44.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type ReturnSwapBase)

- A type describing the components that are common for return type swaps, including short and long form equity swaps representations.

**additionalPayment** (zero or more occurrences; of the type ReturnSwapAdditionalPayment) Specifies additional payment(s) between the principal parties to the trade. This component extends some of the features of the additionalPayment component developed by the FpML industry group. Appropriate discussions will determine whether it would be appropriate to extend the shared component in order to meet the further requirements of equity swaps.

**earlyTermination** (zero or more occurrences; of the type ReturnSwapEarlyTermination) Specifies, for one or for both the parties to the trade, the date from which it can early terminate it.

**extraordinaryEvents** (zero or one occurrence; of the type ExtraordinaryEvents) Where the underlying is shares, specifies events affecting the issuer of those shares that may require the terms of the transaction to be adjusted.

### 1.44.3 Used by:

- Element: equitySwap
- Element: returnSwap

### 1.44.4 Derived Types:

## 1.45 ReturnSwapAdditionalPayment

### 1.45.1 Description:

A type describing the additional payment(s) between the principal parties to the trade. This component extends some of the features of the additionalPayment component previously developed in FpML. Appropriate discussions will determine whether it would be appropriate to extend the shared component in order to meet the further requirements of equity swaps.

### 1.45.2 Contents:

**payerPartyReference** (exactly one occurrence; of the type PartyOrAccountReference) A reference to the party responsible for making the payments defined by this structure.

**receiverPartyReference** (exactly one occurrence; of the type PartyOrAccountReference) A reference to the party that receives the payments corresponding to this structure.

**additionalPaymentAmount** (exactly one occurrence; of the type AdditionalPaymentAmount) Specifies the amount of the fee along with, when applicable, the formula that supports its determination.

**additionalPaymentDate** (exactly one occurrence; of the type AdjustableOrRelativeDate) Specifies the value date of the fee payment/receipt.

**paymentType** (zero or one occurrence; of the type PaymentType) Classification of the payment

### 1.45.3 Used by:

</xsd:complexType>
```

## 1.46 ReturnSwapAmount

### 1.46.1 Description:

Specifies, in relation to each Payment Date, the amount to which the Payment Date relates. For Equity Swaps this element is equivalent to the Equity Amount term as defined in the ISDA 2002 Equity Derivatives Definitions.

### 1.46.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type LegAmount)

- A type describing the amount that will paid or received on each of the payment dates. This type is used to define both the Equity Amount and the Interest Amount.

**cashSettlement** (exactly one occurrence; of the type xsd:boolean) If true, then cash settlement is applicable.

**optionsExchangeDividends** (zero or one occurrence; of the type xsd:boolean) If present and true, then options exchange dividends are applicable.

**additionalDividends** (zero or one occurrence; of the type xsd:boolean) If present and true, then additional dividends are applicable.

## 1.47 ReturnSwapBase

### 1.47.1 Description:

A type describing the components that are common for return type swaps, including short and long form equity swaps representations.

### 1.47.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type Product)

- The base type which all FpML products extend.

**buyerPartyReference** (exactly one occurrence; of the type PartyOrTradeSideReference) A reference to the party that buys this instrument, ie. pays for this instrument and receives the rights defined by it. See 2000 ISDA definitions Article 11.1 (b). In the case of FRAs this the fixed rate payer.

**sellerPartyReference** (exactly one occurrence; of the type PartyOrTradeSideReference) A reference to the party that sells ("writes") this instrument, i.e. that grants the rights defined by this instrument and in return receives a payment for it. See 2000 ISDA definitions Article 11.1 (a). In the case of FRAs this is the floating rate payer.

**returnSwapLeg** (one or more occurrences; of the type ReturnSwapLeg) An placeholder for the actual Return Swap Leg definition.

**principalExchangeFeatures** (zero or one occurrence; of the type PrincipalExchangeFeatures) This is used to document a Fully Funded Return Swap.

### 1.47.3 Used by:

- Complex type: EquitySwapTransactionSupplement
- Complex type: ReturnSwap

### 1.47.4 Derived Types:

- Complex type: EquitySwapTransactionSupplement
- Complex type: ReturnSwap

## 1.48 ReturnSwapEarlyTermination

### 1.48.1 Description:

A type describing the date from which each of the party may be allowed to terminate the trade.

### 1.48.2 Contents:

**partyReference** (exactly one occurrence; of the type PartyReference) Reference to a party defined elsewhere in this document which may be allowed to terminate the trade.

**startingDate** (exactly one occurrence; of the type StartingDate) Specifies the date from which the early termination clause can be exercised.

### 1.48.3 Used by:

- Complex type: ReturnSwap

### 1.48.4 Derived Types:

### 1.48.5 Figure:

### 1.48.6 Schema Fragment:

## 1.49 ReturnSwapLeg

### 1.49.1 Description:

The abstract base class for all types of Return Swap Leg.

### 1.49.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type Leg)

- A supertype of leg. All swap legs extend this type.

**payerPartyReference** (exactly one occurrence; of the type PartyOrAccountReference) A reference to the party responsible for making the payments defined by this structure.

**receiverPartyReference** (exactly one occurrence; of the type PartyOrAccountReference) A reference to the party that receives the payments corresponding to this structure.

**paymentFrequency** (zero or one occurrence; of the type Interval) DEPRECATED This element will be removed in the next FpML major version. Frequency at which this leg pays.

## 1.50 ReturnSwapLegUnderlyer

### 1.50.1 Description:

A base class for all return leg types with an underlyer.

### 1.50.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type ReturnSwapLeg)

- The abstract base class for all types of Return Swap Leg.

**effectiveDate** (exactly one occurrence; of the type AdjustableOrRelativeDate) Specifies the effective date of this leg of the swap. When defined in relation to a date specified somewhere else in the document (through the relativeDate component), this element will typically point to the effective date of the other leg of the swap.

**terminationDate** (exactly one occurrence; of the type AdjustableOrRelativeDate) Specifies the termination date of this leg of the swap. When defined in relation to a date specified somewhere else in the document (through the relativeDate component), this element will typically point to the termination date of the other leg of the swap.

**underlyer** (exactly one occurrence; of the type Underlyer) Specifies the underlying component of the leg, which can be either one or many and consists in either equity, index or convertible bond component, or a combination of these.

### 1.50.3 Used by:

- Complex type: ReturnLeg

### 1.50.4 Derived Types:

- Complex type: ReturnLeg

### 1.50.5 Figure:

## 1.51 ReturnSwapNotional

### 1.51.1 Description:

Specifies the notional of return type swap. When used in the equity leg, the definition will typically combine the actual amount (using the notional component defined by the FpML industry group) and the determination method. When used in the interest leg, the definition will typically point to the definition of the equity leg.

### 1.51.2 Contents:

Either

**amountRelativeTo** (exactly one occurrence; of the type AmountReference) Reference to an amount defined elsewhere in this document.

Or

**determinationMethod** (exactly one occurrence; of the type DeterminationMethod) Specifies the method according to which an amount or a date is determined.

Or

**notionalAmount** (exactly one occurrence; of the type Money) The notional amount.

### 1.51.3 Used by:

- Complex type: DeprecatedEquityLeg
- Complex type: InterestLeg
- Complex type: ReturnLeg

### 1.51.4 Derived Types:

### 1.51.5 Figure:

### 1.51.6 Schema Fragment:

</xsd:complexType>
```

## 1.52 ReturnSwapPaymentDates

### 1.52.1 Description:

A type describing the return payment dates of the swap.

### 1.52.2 Contents:

**paymentDatesInterim** (zero or one occurrence; of the type AdjustableOrRelativeDates) Element named "equityPaymentDatesInterim" in versions prior to FpML 4.2 Second Working Draft. Specifies the interim payment dates of the swap. When defined in relation to a date specified somewhere else in the document (through the relativeDates component), this element will typically refer to the valuation dates and add a lag corresponding to the settlement cycle of the underlying.

**paymentDateFinal** (exactly one occurrence; of the type AdjustableOrRelativeDate) Element named "equityPaymentDateFinal" in versions prior to FpML 4.2 Second Working Draft. Specifies the final payment date of the swap. When defined in relation to a date specified somewhere else in the document (through the relativeDate component), this element will typically refer to the final valuation date and add a lag corresponding to the settlement cycle of the underlying.

### 1.52.3 Used by:

- Complex type: ReturnLegValuation

### 1.52.4 Derived Types:

### 1.52.5 Figure:

### 1.52.6 Schema Fragment:

  <xsd:attribute name="id" type="xsd:ID"/>
</xsd:complexType>
```

## 1.53 StartingDate

### 1.53.1 Description:

A type specifying the date from which the early termination clause can be exercised.

### 1.53.2 Contents:

Either

**dateRelativeTo** (exactly one occurrence; of the type DateReference) Reference to a date defined elsewhere in the document

Or

**adjustableDate** (exactly one occurrence; of the type AdjustableDate) Date from which early termination clause can be exercised

### 1.53.3 Used by:

- Complex type: DeprecatedVarianceAmount
- Complex type: ReturnSwapEarlyTermination

### 1.53.4 Derived Types:

### 1.53.5 Figure:

### 1.53.6 Schema Fragment:

        stub.
      </xsd:documentation>
    </xsd:annotation>
    <xsd:sequence>
      <xsd:element name="initialStub" type="Stub"/>
      <xsd:element name="finalStub" type="Stub" minOccurs="0"/>
    </xsd:sequence>
    <xsd:element name="finalStub" type="Stub"/>
  </xsd:choice>
</xsd:complexType>
```

## 1.55 Variance

### 1.55.1 Description:

A type describing the variance amount of a variance swap

### 1.55.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type CalculationFromObservation)

- Abstract base class for all calculation from observed values

**varianceAmount** (exactly one occurrence; of the type Money) Variance amount, which is a cash multiplier.  
Either

**volatilityStrikePrice** (exactly one occurrence; of the type NonNegativeDecimal)

Or

**varianceStrikePrice** (exactly one occurrence; of the type NonNegativeDecimal)

**varianceCap** (zero or one occurrence; of the type xsd:boolean) If present and true, then variance cap is applicable.

**unadjustedVarianceCap** (zero or one occurrence; of the type PositiveDecimal) For use when varianceCap is applicable. Contains the scaling factor of the Variance Cap that can differ on a trade-by-trade basis in the European market. For example, a Variance Cap of  $2.5^2 \times$  Variance Strike Price has an unadjustedVarianceCap of 2.5.

**boundedVariance** (zero or one occurrence; of the type BoundedVariance) Conditions which bound variance. The contract specifies one or more boundary levels. These levels are expressed as prices for confirmation purposes Underlyer price must be equal to or higher than Lower Barrier is known as Up Conditional Swap Underlyer price must be equal to or lower than Upper Barrier is known as Down Conditional Swap Underlyer price must be equal to or higher than Lower Barrier and must be equal to or lower than Upper Barrier is known as Barrier Conditional Swap.

**exchangeTradedContractNearest** (zero or one occurrence; of the type ExchangeTradedContract) Specification of the exchange traded contract nearest.

**vegaNotionalAmount** (zero or one occurrence; of the type xsd:decimal) Vega Notional represents the approximate gain/loss at maturity for a 1% difference between RVol (realised vol) and KVol (strike vol). It does not necessarily represent the Vega Risk of the trade.

### 1.55.3 Used by:

- Complex type: VarianceAmount

### 1.55.4 Derived Types:

## ***2 Global Elements***

## **2.1 interestLeg**

### **2.1.1 Description:**

The fixed income amounts of the return type swap.

### **2.1.2 Contents:**

Element interestLeg is defined by the complex type InterestLeg

### **2.1.3 Used by:**

### **2.1.4 Substituted by:**

### **2.1.5 Figure:**

### **2.1.6 Schema Fragment:**

```
<xsd:element name="interestLeg" type="InterestLeg" substitutionGroup="returnSwapLeg">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      The fixed income amounts of the return type swap.
    </xsd:documentation>
  </xsd:annotation>
</xsd:element>
```

## **2.2 returnLeg**

### **2.2.1 Description:**

Return amounts of the return type swap.

### **2.2.2 Contents:**

Element returnLeg is defined by the complex type ReturnLeg

### **2.2.3 Used by:**

### **2.2.4 Substituted by:**

### **2.2.5 Figure:**

### **2.2.6 Schema Fragment:**

```
<xsd:element name="returnLeg" type="ReturnLeg" substitutionGroup="returnSwapLeg">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      Return amounts of the return type swap.
    </xsd:documentation>
  </xsd:annotation>
</xsd:element>
```

## 2.3 returnSwap

### 2.3.1 Description:

Specifies the structure of a return type swap. It can represent equity swaps, total return swaps, variance swaps.

### 2.3.2 Contents:

Element returnSwap is defined by the complex type ReturnSwap

### 2.3.3 Used by:

### 2.3.4 Substituted by:

### 2.3.5 Figure:

### 2.3.6 Schema Fragment:

```
<xsd:element name="returnSwap" type="ReturnSwap" substitutionGroup="product">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      Specifies the structure of a return type swap. It can represent
      equity swaps, total return swaps, variance swaps.
    </xsd:documentation>
  </xsd:annotation>
</xsd:element>
```

## 2.4 returnSwapLeg

### 2.4.1 Description:

An placeholder for the actual Return Swap Leg definition.

### 2.4.2 Contents:

Element returnSwapLeg is defined by the complex type ReturnSwapLeg

### 2.4.3 Used by:

- Complex type: ReturnSwapBase

### 2.4.4 Substituted by:

- Element: equityLeg
- Element: interestLeg
- Element: returnLeg
- Element: varianceLeg

### 2.4.5 Figure:

### 2.4.6 Schema Fragment:

```
<xsd:element name="returnSwapLeg" type="ReturnSwapLeg" abstract="true">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      An placeholder for the actual Return Swap Leg definition.
    </xsd:documentation>
  </xsd:annotation>
</xsd:element>
```

## 2.5 varianceLeg

### 2.5.1 Description:

DEPRECATED This element will be removed in the next FpML major version. Return Swap model should not be used for Variance Swaps, use the Variance Swap Product. The variance leg of the return swap.

### 2.5.2 Contents:

Element varianceLeg is defined by the complex type DeprecatedVarianceLeg

### 2.5.3 Used by:

### 2.5.4 Substituted by:

### 2.5.5 Figure:

### 2.5.6 Schema Fragment:

```
<xsd:element name="varianceLeg" type="DeprecatedVarianceLeg" substitutionGroup="returnSwapLeg"
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      DEPRECATED This element will be removed in the next FpML major
      version. Return Swap model should not be used for Variance Swaps,

      swap.
    </xsd:documentation>
  </xsd:annotation>
</xsd:element>
```

## **3 Groups**

## 3.1 Feature.model

### 3.1.1 Description:

A group containing Swap and Derivative features

### 3.1.2 Contents:

**feature** (zero or one occurrence; of the type OptionFeatures) Asian, Barrier, Knock and Pass Through features

**fxFeature** (zero or one occurrence; of the type FxFeature) Quanto, Composite, or Cross Currency FX features

### 3.1.3 Used by:

- Complex type: EquityDerivativeBase

### 3.1.4 Figure:

### 3.1.5 Schema Fragment:

```
<xsd:group name="Feature.model">
  <xsd:annotation>

# ***1 Global Complex Types***

## 1.1 CutName

### 1.1.1 Description:

Allows for an expiryDateTime cut to be described by name.

### 1.1.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type xsd:normalizedString)

•

### 1.1.3 Used by:

- Complex type: ExpiryDateTime

### 1.1.4 Derived Types:

### 1.1.5 Figure:

### 1.1.6 Schema Fragment:

```
<xsd:complexType name="CutName">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      Allows for an expiryDateTime cut to be described by name.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:simpleContent>
    <xsd:extension base="xsd:normalizedString">
      <xsd:attribute name="cutNameScheme" type="xsd:anyURI" default="http://www.fpml.org/coding
    </xsd:extension>
  </xsd:simpleContent>
</xsd:complexType>
```

## 1.2 ExchangeRate

### 1.2.1 Description:

A type that is used for describing the exchange rate for a particular transaction.

### 1.2.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type FxRate)

- A type describing the rate of a currency conversion: pair of currency, quotation mode and exchange rate.

**spotRate** (zero or one occurrence; of the type xsd:decimal) An optional element used for FX forwards and certain types of FX OTC options. For deals consumated in the FX Forwards Market, this represents the current market rate for a particular currency pair. For barrier and digital/binary options, it can be useful to include the spot rate at the time the option was executed to make it easier to know whether the option needs to move "up" or "down" to be triggered.

**forwardPoints** (zero or one occurrence; of the type xsd:decimal) An optional element used for deals consumated in the FX Forwards market. Forward points represent the interest rate differential between the two currencies traded and are quoted as a premium or a discount. Forward points are added to, or subtracted from, the spot rate to create the rate of the forward trade.

**sideRates** (zero or one occurrence; of the type SideRates) An optional element that allow for definition of rates against base currency for non-base currency FX contracts.

### 1.2.3 Used by:

- Complex type: FxLeg

### 1.2.4 Derived Types:

### 1.2.5 Figure:

### 1.2.6 Schema Fragment:

## 1.3 ExpiryDateTime

### 1.3.1 Description:

A type that describes the date and time in a location of the option expiry. In the case of American options this is the latest possible expiry date and time.

### 1.3.2 Contents:

**expiryDate** (exactly one occurrence; of the type `xsd:date`) Represents a standard expiry date as defined for an FX OTC option.

**expiryTime** (exactly one occurrence; of the type `BusinessCenterTime`)

**cutName** (zero or one occurrence; of the type `CutName`)

### 1.3.3 Used by:

- Complex type: `FxAverageRateOption`
- Complex type: `FxDigitalOption`
- Complex type: `FxOptionLeg`

### 1.3.4 Derived Types:

### 1.3.5 Figure:

### 1.3.6 Schema Fragment:

```
<xsd:complexType name="ExpiryDateTime">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">

    </xsd:element>
    <xsd:element name="expiryTime" type="BusinessCenterTime"/>
    <xsd:element name="cutName" type="CutName" minOccurs="0"/>
  </xsd:sequence>
</xsd:complexType>
```

## 1.4 FxAmericanTrigger

### 1.4.1 Description:

A type that defines a particular type of payout in an FX OTC exotic option. An American trigger occurs if the trigger criteria are met at any time from the initiation to the maturity of the option.

### 1.4.2 Contents:

**touchCondition** (exactly one occurrence; of the type TouchConditionEnum) The binary condition that applies to an American-style trigger. There can only be two domain values for this element: "touch" or "no touch".

**quotedCurrencyPair** (exactly one occurrence; of the type QuotedCurrencyPair) Defines the two currencies for an FX trade and the quotation relationship between the two currencies.

**triggerRate** (exactly one occurrence; of the type xsd:decimal) The market rate is observed relative to the trigger rate, and if it is found to be on the predefined side of (above or below) the trigger rate, a trigger event is deemed to have occurred.

**informationSource** (one or more occurrences; of the type InformationSource) The information source where a published or displayed market rate will be obtained, e.g. Telerate Page 3750.

**observationStartDate** (zero or one occurrence; of the type xsd:date) The start of the period over which observations are made to determine whether a trigger has occurred.

**observationEndDate** (zero or one occurrence; of the type xsd:date) The end of the period over which observations are made to determine whether a trigger event has occurred.

### 1.4.3 Used by:

- Complex type: FxDigitalOption

### 1.4.4 Derived Types:

### 1.4.5 Figure:

### 1.4.6 Schema Fragment:

```
<xsd:complexType name="FxAmericanTrigger">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">

      determine whether a trigger event has occurred.
    </xsd:documentation>
  </xsd:annotation>
</xsd:element>
</xsd:sequence>
</xsd:complexType>
```

## 1.5 FxAverageRateObservationDate

### 1.5.1 Description:

A type that, for average rate options, is used to describe each specific observation date, as opposed to a parametric frequency of rate observations.

### 1.5.2 Contents:

**observationDate** (exactly one occurrence; of the type xsd:date) A specific date for which an observation against a particular rate will be made and will be used for subsequent computations.

**averageRateWeightingFactor** (exactly one occurrence; of the type xsd:decimal) An optional factor that can be used for weighting certain observation dates. Typically, firms will weight each date with a factor of 1 if there are standard, unweighted adjustments.

### 1.5.3 Used by:

- Complex type: FxAverageRateOption

### 1.5.4 Derived Types:

### 1.5.5 Figure:

### 1.5.6 Schema Fragment:

```
<xsd:complexType name="FxAverageRateObservationDate">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A type that, for average rate options, is used to describe each
      specific observation date, as opposed to a parametric frequency

      </xsd:annotation>
    </xsd:element>
  </xsd:sequence>
</xsd:complexType>
```

## 1.6 FxAverageRateObservationSchedule

### 1.6.1 Description:

A type that describes average rate options rate observations. This is used to describe a parametric frequency of rate observations against a particular rate. Typical frequencies might include daily, every Friday, etc.

### 1.6.2 Contents:

**observationStartDate** (exactly one occurrence; of the type xsd:date) The start of the period over which observations are made to determine whether a trigger has occurred.

**observationEndDate** (exactly one occurrence; of the type xsd:date) The end of the period over which observations are made to determine whether a trigger event has occurred.

**calculationPeriodFrequency** (exactly one occurrence; of the type CalculationPeriodFrequency) The frequency at which calculation period end dates occur with the regular part of the calculation period schedule and their roll date convention.

### 1.6.3 Used by:

- Complex type: FxAverageRateOption

### 1.6.4 Derived Types:

### 1.6.5 Figure:

### 1.6.6 Schema Fragment:

    </xsd:element>
  </xsd:sequence>
</xsd:complexType>
```

## 1.7 FxAverageRateOption

### 1.7.1 Description:

A type that is used for an option whose payout is based on the average of the price of the underlying over a specific period of time. The payout is the difference between the predetermined, fixed strike price and the average of spot rates observed and is used for hedging against prevailing spot rates over a given time period.

### 1.7.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type Product)

- The base type which all FpML products extend.

**buyerPartyReference** (exactly one occurrence; of the type PartyOrTradeSideReference) A reference to the party that buys this instrument, ie. pays for this instrument and receives the rights defined by it. See 2000 ISDA definitions Article 11.1 (b). In the case of FRAs this the fixed rate payer.

**sellerPartyReference** (exactly one occurrence; of the type PartyOrTradeSideReference) A reference to the party that sells ("writes") this instrument, i.e. that grants the rights defined by this instrument and in return receives a payment for it. See 2000 ISDA definitions Article 11.1 (a). In the case of FRAs this is the floating rate payer.

**expiryDateTime** (exactly one occurrence; of the type ExpiryDateTime) The date and time in a location of the option expiry. In the case of american options this is the latest possible expiry date and time.

**exerciseStyle** (exactly one occurrence; of the type ExerciseStyleEnum) The manner in which the option can be exercised.

**fxOptionPremium** (zero or more occurrences; of the type FxOptionPremium) Premium amount or premium installment amount for an option.

**valueDate** (exactly one occurrence; of the type xsd:date) The date on which both currencies traded will settle.

**putCurrencyAmount** (exactly one occurrence; of the type Money) The currency amount that the option gives the right to sell.

**callCurrencyAmount** (exactly one occurrence; of the type Money) The currency amount that the option gives the right to buy.

**fxStrikePrice** (exactly one occurrence; of the type FxStrikePrice) TBA

**spotRate** (zero or one occurrence; of the type xsd:decimal) An optional element used for FX forwards and certain types of FX OTC options. For deals consumated in the FX Forwards Market, this represents the current market rate for a particular currency pair. For barrier and digital/binary options, it can be useful to include the spot rate at the time the option was executed to make it easier to know whether the option needs to move "up" or "down" to be triggered.

**payoutCurrency** (exactly one occurrence; of the type Currency) The ISO code of the currency in which a payout (if any) is to be made when a trigger is hit on a digital or barrier option.

**averageRateQuoteBasis** (exactly one occurrence; of the type StrikeQuoteBasisEnum) The method by which the average rate that is being observed is quoted.

**precision** (zero or one occurrence; of the type xsd:nonNegativeInteger) Specifies the rounding precision in terms of a number of decimal places. Note how a percentage rate rounding of 5 decimal places is expressed as a rounding precision of 7 in the FpML document since the percentage is expressed as a decimal, e.g. 9.876543% (or 0.09876543) being rounded to the nearest 5 decimal places is 9.87654% (or 0.0987654).

**payoutFormula** (zero or one occurrence; of the type xsd:string) The description of the mathematical computation for how the payout is computed.

**primaryRateSource** (exactly one occurrence; of the type InformationSource) The primary source for where the rate observation will occur. Will typically be either a page or a reference bank published rate.

**secondaryRateSource** (zero or one occurrence; of the type InformationSource) An alternative, or secondary, source for where the rate observation will occur. Will typically be either a page or a reference bank published rate.

**fixingTime** (exactly one occurrence; of the type BusinessCenterTime) The time at which the spot currency exchange rate will be observed. It is specified as a time in a specific business center, e.g. 11:00am London time.

Either

**averageRateObservationSchedule** (exactly one occurrence; of the type FxAverageRateObservationSchedule) Parametric schedule of rate observations.

Or

**averageRateObservationDate** (one or more occurrences; of the type FxAverageRateObservationDate) One or more specific rate observation dates.

**observedRates** (zero or more occurrences; of the type ObservedRates) Describes prior rate observations within average rate options. Periodically, an average rate option agreement will be struck whereby some rates have already been observed in the past but will become part of computation of the average rate of the option. This structure provides for these previously observed rates to be included in the description of the trade.

## 1.8 FxBarrier

### 1.8.1 Description:

A type that is used within the FX barrier option definition to define one or more barrier levels that determine whether the option will be knocked-in or knocked-out.

### 1.8.2 Contents:

**fxBarrierType** (zero or one occurrence; of the type FxBarrierTypeEnum) This specifies whether the option becomes effective ("knock-in") or is annulled ("knock-out") when the respective trigger event occurs.

**quotedCurrencyPair** (exactly one occurrence; of the type QuotedCurrencyPair) Defines the two currencies for an FX trade and the quotation relationship between the two currencies.

**triggerRate** (exactly one occurrence; of the type xsd:decimal) The market rate is observed relative to the trigger rate, and if it is found to be on the predefined side of (above or below) the trigger rate, a trigger event is deemed to have occurred.

**informationSource** (one or more occurrences; of the type InformationSource) The information source where a published or displayed market rate will be obtained, e.g. Telerate Page 3750.

**observationStartDate** (zero or one occurrence; of the type xsd:date) The start of the period over which observations are made to determine whether a trigger has occurred.

**observationEndDate** (zero or one occurrence; of the type xsd:date) The end of the period over which observations are made to determine whether a trigger event has occurred.

### 1.8.3 Used by:

## 1.9 FxBarrierOption

### 1.9.1 Description:

A type that describes an option with a put/call component, but also one or more associated barrier rates. If the market rate moves to reach a barrier rate a trigger event occurs. The trigger event may for example be necessary to enable the option, or may annul the option contract. [Since the barriers reduce the probability of exercise, the premium for an option with barriers is likely to be cheaper than one without].

### 1.9.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type FxOptionLeg)

- A type that is used for describing a standard FX OTC option (European or American) which may be a complete trade in its own right or part of a trade strategy.

**spotRate** (zero or one occurrence; of the type xsd:decimal) An optional element used for FX forwards and certain types of FX OTC options. For deals consumated in the FX Forwards Market, this represents the current market rate for a particular currency pair. For barrier and digital/binary options, it can be useful to include the spot rate at the time the option was executed to make it easier to know whether the option needs to move "up" or "down" to be triggered.

**fxBarrier** (one or more occurrences; of the type FxBarrier) Information about a barrier rate in a Barrier Option - specifying the exact criteria for a trigger event to occur.

**triggerPayout** (zero or one occurrence; of the type FxOptionPayout) The amount of currency which becomes payable if and when a trigger event occurs.

## 1.10 FxDigitalOption

### 1.10.1 Description:

A type that describes an option without a put/call component (and so no associated exercise), but with one or more trigger rates) Examples are "one-touch", "no-touch", and "double-no-touch" options. For a specified period the market rate is observed relative to the trigger rates, and on a trigger event a fixed payout may become due to the buyer of the option, or alternatively the option contract may be annulled.

### 1.10.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type Product)

- The base type which all FpML products extend.

**buyerPartyReference** (exactly one occurrence; of the type PartyOrTradeSideReference) A reference to the party that buys this instrument, ie. pays for this instrument and receives the rights defined by it. See 2000 ISDA definitions Article 11.1 (b). In the case of FRAs this the fixed rate payer.

**sellerPartyReference** (exactly one occurrence; of the type PartyOrTradeSideReference) A reference to the party that sells ("writes") this instrument, i.e. that grants the rights defined by this instrument and in return receives a payment for it. See 2000 ISDA definitions Article 11.1 (a). In the case of FRAs this is the floating rate payer.

**expiryDateTime** (exactly one occurrence; of the type ExpiryDateTime) The date and time in a location of the option expiry. In the case of american options this is the latest possible expiry date and time.

**fxOptionPremium** (zero or more occurrences; of the type FxOptionPremium) Premium amount or premium installment amount for an option.

**valueDate** (exactly one occurrence; of the type xsd:date) The date on which both currencies traded will settle.

**quotedCurrencyPair** (exactly one occurrence; of the type QuotedCurrencyPair) Defines the two currencies for an FX trade and the quotation relationship between the two currencies.

**spotRate** (zero or one occurrence; of the type xsd:decimal) An optional element used for FX forwards and certain types of FX OTC options. For deals consumated in the FX Forwards Market, this represents the current market rate for a particular currency pair. For barrier and digital/binary options, it can be useful to include the spot rate at the time the option was executed to make it easier to know whether the option needs to move "up" or "down" to be triggered.

Either

**fxEuropeanTrigger** (one or more occurrences; of the type FxEuropeanTrigger) A European trigger occurs if the trigger criteria are met, but these are valid (and an observation is made) only at the maturity of the option.

Or

**fxAmericanTrigger** (one or more occurrences; of the type FxAmericanTrigger) An American trigger occurs if the trigger criteria are met at any time from the initiation to the maturity of the option.

**triggerPayout** (exactly one occurrence; of the type FxOptionPayout) The amount of currency which becomes payable if and when a trigger event occurs.

## 1.11 FxEuropeanTrigger

### 1.11.1 Description:

A type that defines a particular type of payout in an FX OTC exotic option. A European trigger occurs if the trigger criteria are met, but these are valid (and an observation is made) only at the maturity of the option.

### 1.11.2 Contents:

**triggerCondition** (exactly one occurrence; of the type TriggerConditionEnum) The condition that applies to a European-style trigger. It determines where the rate at expiry date and time at must be relative to the triggerRate for the option to be exercisable. The allowed values are "Above" and "Below".

**quotedCurrencyPair** (exactly one occurrence; of the type QuotedCurrencyPair) Defines the two currencies for an FX trade and the quotation relationship between the two currencies.

**triggerRate** (exactly one occurrence; of the type xsd:decimal) The market rate is observed relative to the trigger rate, and if it is found to be on the predefined side of (above or below) the trigger rate, a trigger event is deemed to have occurred.

**informationSource** (one or more occurrences; of the type InformationSource) The information source where a published or displayed market rate will be obtained, e.g. Telerate Page 3750.

## 1.12 FxLeg

### 1.12.1 Description:

A type that represents a single exchange of one currency for another. This is used for representing FX spot, forward, and swap transactions.

### 1.12.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type Product)

- The base type which all FpML products extend.

**exchangedCurrency1** (exactly one occurrence; of the type Payment) This is the first of the two currency flows that define a single leg of a standard foreign exchange transaction.

**exchangedCurrency2** (exactly one occurrence; of the type Payment) This is the second of the two currency flows that define a single leg of a standard foreign exchange transaction.

Either

**valueDate** (exactly one occurrence; of the type xsd:date) The date on which both currencies traded will settle.

**exchangeRate** (exactly one occurrence; of the type ExchangeRate) The rate of exchange between the two currencies.

**nonDeliverableForward** (zero or one occurrence; of the type FxCashSettlement) Used to describe a particular type of FX forward transaction that is settled in a single currency.

**confirmationSenderPartyReference** (zero or one occurrence; of the type PartyReference) A reference to the party that is sending the current document as a confirmation of the trade.

### 1.12.3 Used by:

- Element: fxSingleLeg

## 1.13 FxOptionLeg

### 1.13.1 Description:

A type that is used for describing a standard FX OTC option (European or American) which may be a complete trade in its own right or part of a trade strategy.

### 1.13.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type Product)

- The base type which all FpML products extend.

**buyerPartyReference** (exactly one occurrence; of the type PartyOrTradeSideReference) A reference to the party that buys this instrument, ie. pays for this instrument and receives the rights defined by it. See 2000 ISDA definitions Article 11.1 (b). In the case of FRAs this the fixed rate payer.

**sellerPartyReference** (exactly one occurrence; of the type PartyOrTradeSideReference) A reference to the party that sells ("writes") this instrument, i.e. that grants the rights defined by this instrument and in return receives a payment for it. See 2000 ISDA definitions Article 11.1 (a). In the case of FRAs this is the floating rate payer.

**expiryDateTime** (exactly one occurrence; of the type ExpiryDateTime) The date and time in a location of the option expiry. In the case of american options this is the latest possible expiry date and time.

**exerciseStyle** (exactly one occurrence; of the type ExerciseStyleEnum) The manner in which the option can be exercised.

**fxOptionPremium** (zero or more occurrences; of the type FxOptionPremium) Premium amount or premium installment amount for an option.

**valueDate** (exactly one occurrence; of the type xsd:date) The date on which both currencies traded will settle.

**cashSettlementTerms** (zero or one occurrence; of the type FxCashSettlement) This optional element is only used if an option has been specified at execution time to be settled into a single cash payment. This would be used for a non-deliverable option.

**putCurrencyAmount** (exactly one occurrence; of the type Money) The currency amount that the option gives the right to sell.

**callCurrencyAmount** (exactly one occurrence; of the type Money) The currency amount that the option gives the right to buy.

**fxStrikePrice** (exactly one occurrence; of the type FxStrikePrice) TBA

**quotedAs** (zero or one occurrence; of the type QuotedAs) Describes how the option was quoted.

## 1.14 FxOptionPayout

### 1.14.1 Description:

A type that contains full details of a predefined fixed payout which may occur (or not) in a Barrier Option or Digital Option when a trigger event occurs (or not).

### 1.14.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type Money)

- A type defining a currency amount.

**payoutStyle** (exactly one occurrence; of the type PayoutEnum) The trigger event and payout may be asynchronous. A payout may become due on the trigger event, or the payout may (by agreement at initiation) be deferred (for example) to the maturity date.

**settlementInformation** (zero or one occurrence; of the type SettlementInformation) The information required to settle a currency payment that results from a trade.

### 1.14.3 Used by:

- Complex type: FxBarrierOption
- Complex type: FxDigitalOption

### 1.14.4 Derived Types:

### 1.14.5 Figure:

  </xsd:complexContent>
</xsd:complexType>
```

## 1.15 FxOptionPremium

### 1.15.1 Description:

A type that specifies the premium exchanged for a single option trade or option strategy.

### 1.15.2 Contents:

**payerPartyReference** (exactly one occurrence; of the type PartyOrAccountReference) A reference to the party responsible for making the payments defined by this structure.

**receiverPartyReference** (exactly one occurrence; of the type PartyOrAccountReference) A reference to the party that receives the payments corresponding to this structure.

**premiumAmount** (exactly one occurrence; of the type Money) The specific currency and amount of the option premium.

**premiumSettlementDate** (exactly one occurrence; of the type xsd:date) The agreed-upon date when the option premium will be settled.

**settlementInformation** (zero or one occurrence; of the type SettlementInformation) The information required to settle a currency payment that results from a trade.

**premiumQuote** (zero or one occurrence; of the type PremiumQuote) This is the option premium as quoted. It is expected to be consistent with the premiumAmount and is for information only.

### 1.15.3 Used by:

- Complex type: FxAverageRateOption
- Complex type: FxDigitalOption
- Complex type: FxOptionLeg

```

## 1.16 FxStrikePrice

### 1.16.1 Description:

A type that describes the rate of exchange at which the option has been struck.

### 1.16.2 Contents:

**rate** (exactly one occurrence; of the type xsd:decimal) The rate of exchange between the two currencies of the leg of a deal. Must be specified with a quote basis.

**strikeQuoteBasis** (exactly one occurrence; of the type StrikeQuoteBasisEnum) The method by which the strike rate is quoted.

### 1.16.3 Used by:

- Complex type: FxAverageRateOption
- Complex type: FxOptionLeg

### 1.16.4 Derived Types:

### 1.16.5 Figure:

### 1.16.6 Schema Fragment:

    </xsd:element>
  </xsd:sequence>
</xsd:complexType>
```

## 1.17 FxSwap

### 1.17.1 Description:

A type that describes an FX swap. This is similar to FpML\_FXLeg, but contains multiple legs for a particular trade.

### 1.17.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type Product)

- The base type which all FpML products extend.

**fxSingleLeg** (one or more occurrences; of the type FxLeg) A single-legged FX transaction definition (e.g., spot or forward).

### 1.17.3 Used by:

- Element: fxSwap

### 1.17.4 Derived Types:

### 1.17.5 Figure:

### 1.17.6 Schema Fragment:

```
<xsd:complexType name="FxSwap">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">

      but contains multiple legs for a particular trade.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:complexContent>
    <xsd:extension base="Product">
      <xsd:sequence>
        <xsd:element ref="fxSingleLeg" maxOccurs="unbounded" />
      </xsd:sequence>
    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

## 1.18 ObservedRates

### 1.18.1 Description:

A type that describes prior rate observations within average rate options. Periodically, an average rate option agreement will be struck whereby some rates have already been observed in the past but will become part of computation of the average rate of the option. This structure provides for these previously observed rates to be included in the description of the trade.

### 1.18.2 Contents:

**observationDate** (exactly one occurrence; of the type xsd:date) A specific date for which an observation against a particular rate will be made and will be used for subsequent computations.

**observedRate** (exactly one occurrence; of the type xsd:decimal) The actual observed rate before any required rate treatment is applied, e.g. before converting a rate quoted on a discount basis to an equivalent yield. An observed rate of 5% would be represented as 0.05.

### 1.18.3 Used by:

- Complex type: FxAverageRateOption

### 1.18.4 Derived Types:

### 1.18.5 Figure:

### 1.18.6 Schema Fragment:

        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
  </xsd:sequence>
</xsd:complexType>
```

## 1.19 PremiumQuote

### 1.19.1 Description:

A type that describes the option premium as quoted.

### 1.19.2 Contents:

**premiumValue** (exactly one occurrence; of the type xsd:decimal) The value of the premium quote. In general this will be either a percentage or an explicit amount.

**premiumQuoteBasis** (exactly one occurrence; of the type PremiumQuoteBasisEnum) The method by which the option premium was quoted.

### 1.19.3 Used by:

- Complex type: FxOptionPremium

### 1.19.4 Derived Types:

### 1.19.5 Figure:

### 1.19.6 Schema Fragment:

      </xsd:annotation>
    </xsd:element>
  </xsd:sequence>
</xsd:complexType>
```

## 1.20 QuotedAs

### 1.20.1 Description:

A type that describes how the option was quoted.

### 1.20.2 Contents:

**optionOnCurrency** (exactly one occurrence; of the type Currency) Either the callCurrencyAmount or the putCurrencyAmount defined elsewhere in the document. The currency reference denotes the option currency as the option was quoted (as opposed to the face currency).

**faceOnCurrency** (exactly one occurrence; of the type Currency) Either the callCurrencyAmount or the putCurrencyAmount defined elsewhere in the document. The currency reference denotes the face currency as the option was quoted (as opposed to the option currency).

**quotedTenor** (zero or one occurrence; of the type Interval) Code denoting the tenor of the option leg.

### 1.20.3 Used by:

- Complex type: FxOptionLeg

### 1.20.4 Derived Types:

### 1.20.5 Figure:

### 1.20.6 Schema Fragment:

```
<xsd:complexType name="QuotedAs">

```

## 1.21 SideRate

### 1.21.1 Description:

A type that is used for describing a particular rate against base currency. Exists within SideRates.

### 1.21.2 Contents:

**currency** (exactly one occurrence; of the type Currency) The currency in which an amount is denominated.

**sideRateBasis** (exactly one occurrence; of the type SideRateBasisEnum) The method by which the exchange rate against base currency is quoted.

**rate** (exactly one occurrence; of the type xsd:decimal) The rate of exchange between the two currencies of the leg of a deal. Must be specified with a quote basis.

**spotRate** (zero or one occurrence; of the type xsd:decimal) An optional element used for FX forwards and certain types of FX OTC options. For deals consumated in the FX Forwards Market, this represents the current market rate for a particular currency pair. For barrier and digital/binary options, it can be useful to include the spot rate at the time the option was executed to make it easier to know whether the option needs to move "up" or "down" to be triggered.

**forwardPoints** (zero or one occurrence; of the type xsd:decimal) An optional element used for deals consumated in the FX Forwards market. Forward points represent the interest rate differential between the two currencies traded and are quoted as a premium or a discount. Forward points are added to, or subtracted from, the spot rate to create the rate of the forward trade.

### 1.21.3 Used by:

- Complex type: SideRates

## 1.22 SideRates

### 1.22.1 Description:

A type that is used for including rates against base currency for non-base currency FX contracts.

### 1.22.2 Contents:

**baseCurrency** (exactly one occurrence; of the type Currency) The currency that is used as the basis for the side rates when calculating a cross rate.

**currency1SideRate** (zero or one occurrence; of the type SideRate) The exchange rate for the first currency of the trade against base currency.

**currency2SideRate** (zero or one occurrence; of the type SideRate) The exchange rate for the second currency of the trade against base currency.

### 1.22.3 Used by:

- Complex type: ExchangeRate

### 1.22.4 Derived Types:

### 1.22.5 Figure:

### 1.22.6 Schema Fragment:

```

## 1.23 TermDeposit

### 1.23.1 Description:

A class defining the content model for a term deposit product.

### 1.23.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type Product)

- The base type which all FpML products extend.

**initialPayerReference** (exactly one occurrence; of the type PartyReference) A pointer style reference to a party identifier defined elsewhere in the document. The party referenced is the payer of the initial principal of the deposit on the start date.

**initialReceiverReference** (exactly one occurrence; of the type PartyReference) A pointer style reference to a party identifier defined elsewhere in the document. The party is the receiver of the initial principal of the deposit on the start date.

**startDate** (exactly one occurrence; of the type xsd:date) The averaging period start date.

**maturityDate** (exactly one occurrence; of the type xsd:date) The end date of the calculation period. This date should already be adjusted for any applicable business day convention.

**dayCountFraction** (exactly one occurrence; of the type DayCountFraction) The day count fraction.

**principal** (exactly one occurrence; of the type Money) The principal amount of the trade.

**fixedRate** (exactly one occurrence; of the type xsd:decimal) The calculation period fixed rate. A per annum rate, expressed as a decimal. A fixed rate of 5% would be represented as 0.05.

**interest** (zero or one occurrence; of the type Money) The total interest of at maturity of the trade.

**payment** (zero or more occurrences; of the type Payment) A known payment between two parties.

## ***2 Global Elements***

## 2.1 fxAverageRateOption

### 2.1.1 Description:

A component describing an FX Average Rate Option product.

### 2.1.2 Contents:

Element fxAverageRateOption is defined by the complex type FxAverageRateOption

### 2.1.3 Used by:

### 2.1.4 Substituted by:

### 2.1.5 Figure:

### 2.1.6 Schema Fragment:

```
<xsd:element name="fxAverageRateOption" type="FxAverageRateOption" substitutionGroup="product">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A component describing an FX Average Rate Option product.
    </xsd:documentation>
  </xsd:annotation>
</xsd:element>
```

## 2.2 fxBarrierOption

### 2.2.1 Description:

A component describing a FX Barrier Option product.

### 2.2.2 Contents:

Element fxBarrierOption is defined by the complex type FxBarrierOption

### 2.2.3 Used by:

### 2.2.4 Substituted by:

### 2.2.5 Figure:

### 2.2.6 Schema Fragment:

```

# ***1 Global Complex Types***

## 1.1 BondReference

### 1.1.1 Description:

A type including a reference to a bond to support the representation of an asset swap or Condition Precedent Bond.

### 1.1.2 Contents:

**bond** (exactly one occurrence; of the type Bond) Defines the underlying asset when it is a bond.

**conditionPrecedentBond** (exactly one occurrence; of the type xsd:boolean) To indicate whether the Condition Precedent Bond is applicable. The swap contract is only valid if the bond is issued and if there is any dispute over the terms of fixed stream then the bond terms would be used.

**discrepancyClause** (zero or one occurrence; of the type xsd:boolean) To indicate whether the Discrepancy Clause is applicable.

### 1.1.3 Used by:

- Complex type: SwapAdditionalTerms

### 1.1.4 Derived Types:

### 1.1.5 Figure:

## 1.2 BulletPayment

### 1.2.1 Description:

A product to represent a single cashflow.

### 1.2.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type Product)

- The base type which all FpML products extend.

**payment** (exactly one occurrence; of the type Payment) A known payment between two parties.

### 1.2.3 Used by:

- Element: bulletPayment

### 1.2.4 Derived Types:

### 1.2.5 Figure:

### 1.2.6 Schema Fragment:

```
<xsd:complexType name="BulletPayment">

        </xsd:element>
      </xsd:sequence>
    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

## 1.3 Calculation

### 1.3.1 Description:

A type defining the parameters used in the calculation of fixed or floating calculation period amounts.

### 1.3.2 Contents:

Either

**notionalSchedule** (exactly one occurrence; of the type Notional) The notional amount or notional amount schedule.

Or

**fxLinkedNotionalSchedule** (exactly one occurrence; of the type FxLinkedNotionalSchedule) A notional amount schedule where each notional that applied to a calculation period is calculated with reference to a notional amount or notional amount schedule in a different currency by means of a spot currency exchange rate which is normally observed at the beginning of each period.

Either

**fixedRateSchedule** (exactly one occurrence; of the type Schedule) The fixed rate or fixed rate schedule expressed as explicit fixed rates and dates. In the case of a schedule, the step dates may be subject to adjustment in accordance with any adjustments specified in calculationPeriodDatesAdjustments.

Or

**rateCalculation** (exactly one occurrence; of the type Rate) The base element for the floating rate calculation definitions.

**dayCountFraction** (exactly one occurrence; of the type DayCountFraction) The day count fraction.

**discounting** (zero or one occurrence; of the type Discounting) The parameters specifying any discounting conventions that may apply. This element must only be included if discounting applies.

**compoundingMethod** (zero or one occurrence; of the type CompoundingMethodEnum) If more than one calculation period contributes to a single payment amount this element specifies whether compounding is applicable, and if so, what compounding method is to be used. This element must only be included when more than one calculation period contributes to a single payment amount.

### 1.3.3 Used by:

- Complex type: CalculationPeriodAmount

## 1.4 CalculationPeriod

### 1.4.1 Description:

A type defining the parameters used in the calculation of a fixed or floating rate calculation period amount. This type forms part of cashflows representation of a swap stream.

### 1.4.2 Contents:

**unadjustedStartDate** (zero or one occurrence; of the type xsd:date)

**unadjustedEndDate** (zero or one occurrence; of the type xsd:date)

**adjustedStartDate** (zero or one occurrence; of the type xsd:date) The calculation period start date, adjusted according to any relevant business day convention.

**adjustedEndDate** (zero or one occurrence; of the type xsd:date) The calculation period end date, adjusted according to any relevant business day convention.

**calculationPeriodNumberOfDays** (zero or one occurrence; of the type xsd:positiveInteger) The number of days from the adjusted effective / start date to the adjusted termination / end date calculated in accordance with the applicable day count fraction.

Either

**notionalAmount** (exactly one occurrence; of the type xsd:decimal) The amount that a cashflow will accrue interest on.

Or

**fxLinkedNotionalAmount** (exactly one occurrence; of the type FxLinkedNotionalAmount) The amount that a cashflow will accrue interest on. This is the calculated amount of the fx linked - ie the other currency notional amount multiplied by the appropriate fx spot rate.

Either

**floatingRateDefinition** (exactly one occurrence; of the type FloatingRateDefinition) The floating rate reset information for the calculation period.

Or

**fixedRate** (exactly one occurrence; of the type xsd:decimal) The calculation period fixed rate. A per annum rate, expressed as a decimal. A fixed rate of 5% would be represented as 0.05.

**dayCountYearFraction** (zero or one occurrence; of the type xsd:decimal) The year fraction value of the calculation period, result of applying the ISDA rules for day count fraction defined in the ISDA Annex.

**forecastAmount** (zero or one occurrence; of the type Money) The amount representing the forecast of the accrued value of the calculation period. An intermediate value used to generate the forecastPaymentAmount in the PaymentCalculationPeriod.

**forecastRate** (zero or one occurrence; of the type xsd:decimal) A value representing the forecast rate used to calculate the forecast future value of the accrual period. This is a calculated rate determined based on averaging the rates in the rateObservation elements, and incorporates all of the rate treatment and averaging rules. A value of 1% should be represented as 0.01

## 1.5 CalculationPeriodAmount

### 1.5.1 Description:

A type defining the parameters used in the calculation of fixed or floating rate calculation period amounts or for specifying a known calculation period amount or known amount schedule.

### 1.5.2 Contents:

Either

**calculation** (exactly one occurrence; of the type Calculation) The parameters used in the calculation of fixed or floating rate calculation period amounts.

Or

**knownAmountSchedule** (exactly one occurrence; of the type AmountSchedule) The known calculation period amount or a known amount schedule expressed as explicit known amounts and dates. In the case of a schedule, the step dates may be subject to adjustment in accordance with any adjustments specified in calculationPeriodDatesAdjustments.

### 1.5.3 Used by:

- Complex type: InterestRateStream

### 1.5.4 Derived Types:

### 1.5.5 Figure:

### 1.5.6 Schema Fragment:

## 1.6 CalculationPeriodDates

### 1.6.1 Description:

A type defining the parameters used to generate the calculation period dates schedule, including the specification of any initial or final stub calculation periods. A calculation period schedule consists of an optional initial stub calculation period, one or more regular calculation periods and an optional final stub calculation period. In the absence of any initial or final stub calculation periods, the regular part of the calculation period schedule is assumed to be between the effective date and the termination date. No implicit stubs are allowed, i.e. stubs must be explicitly specified using an appropriate combination of firstPeriodStartDate, firstRegularPeriodStartDate and lastRegularPeriodEndDate.

### 1.6.2 Contents:

Either

**effectiveDate** (exactly one occurrence; of the type AdjustableDate) The first day of the term of the trade. This day may be subject to adjustment in accordance with a business day convention.

Or

**relativeEffectiveDate** (exactly one occurrence; of the type AdjustedRelativeDateOffset) Defines the effective date.

Either

**terminationDate** (exactly one occurrence; of the type AdjustableDate) The last day of the term of the trade. This day may be subject to adjustment in accordance with a business day convention.

Or

**relativeTerminationDate** (exactly one occurrence; of the type RelativeDateOffset) The term/maturity of the swap, express as a tenor (typically in years).

**calculationPeriodDatesAdjustments** (exactly one occurrence; of the type BusinessDayAdjustments) The business day convention to apply to each calculation period end date if it would otherwise fall on a day that is not a business day in the specified financial business centers.

**firstPeriodStartDate** (zero or one occurrence; of the type AdjustableDate) The start date of the calculation period if the date falls before the effective date. It must only be specified if it is not equal to the effective date. This date may be subject to adjustment in accordance with a business day convention.

**firstRegularPeriodStartDate** (zero or one occurrence; of the type xsd:date) The start date of the regular part of the calculation period schedule. It must only be specified if there is an initial stub calculation period. This day may be subject to adjustment in accordance with any adjustments specified in calculationPeriodDatesAdjustments.

**firstCompoundingPeriodEndDate** (zero or one occurrence; of the type xsd:date) The end date of the initial compounding period when compounding is applicable. It must only be specified when the compoundingMethod element is present and not equal to a value of None. This date may be subject to adjustment in accordance with any adjustments specified in calculationPeriodDatesAdjustments.

**lastRegularPeriodEndDate** (zero or one occurrence; of the type xsd:date) The end date of the regular part of the calculation period schedule. It must only be specified if there is a final stub calculation period. This day may be subject to adjustment in accordance with any adjustments specified in calculationPeriodDatesAdjustments.

**stubPeriodType** (zero or one occurrence; of the type StubPeriodTypeEnum) Method to allocate any irregular period remaining after regular periods have been allocated between the effective and termination date.

**calculationPeriodFrequency** (exactly one occurrence; of the type CalculationPeriodFrequency) The frequency at which calculation period end dates occur with the regular part of the calculation period schedule and their roll date convention.

### 1.6.3 Used by:

## 1.8 CancelableProvision

### 1.8.1 Description:

A type defining the right of a party to cancel a swap transaction on the specified exercise dates. The provision is for 'walkaway' cancellation (i.e. the fair value of the swap is not paid). A fee payable on exercise can be specified.

### 1.8.2 Contents:

**buyerPartyReference** (exactly one occurrence; of the type PartyOrTradeSideReference) A reference to the party that buys this instrument, ie. pays for this instrument and receives the rights defined by it. See 2000 ISDA definitions Article 11.1 (b). In the case of FRAs this the fixed rate payer.

**sellerPartyReference** (exactly one occurrence; of the type PartyOrTradeSideReference) A reference to the party that sells ("writes") this instrument, i.e. that grants the rights defined by this instrument and in return receives a payment for it. See 2000 ISDA definitions Article 11.1 (a). In the case of FRAs this is the floating rate payer.

**exercise** (exactly one occurrence; of the type Exercise) An placeholder for the actual option exercise definitions.

**exerciseNotice** (zero or one occurrence; of the type ExerciseNotice) Definition of the party to whom notice of exercise should be given.

**followUpConfirmation** (exactly one occurrence; of the type xsd:boolean) A flag to indicate whether follow-up confirmation of exercise (written or electronic) is required following telephonic notice by the buyer to the seller or seller's agent.

**cancelableProvisionAdjustedDates** (zero or one occurrence; of the type CancelableProvisionAdjustedDates) The adjusted dates associated with a cancelable provision. These dates have been adjusted for any applicable business day convention.

**finalCalculationPeriodDateAdjustment** (zero or more occurrences; of the type FinalCalculationPeriodDateAdjustment)

**initialFee** (zero or one occurrence; of the type SimplePayment) An initial fee for the cancelable option.

### 1.8.3 Used by:

## 1.11 CapFloor

### 1.11.1 Description:

A type defining an interest rate cap, floor, or cap/floor strategy (e.g. collar) product.

### 1.11.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type Product)

- The base type which all FpML products extend.

**capFloorStream** (exactly one occurrence; of the type InterestRateStream)

**premium** (zero or more occurrences; of the type Payment) The option premium amount payable by buyer to seller on the specified payment date.

**additionalPayment** (zero or more occurrences; of the type Payment) Additional payments between the principal parties.

**earlyTerminationProvision** (zero or one occurrence; of the type EarlyTerminationProvision) Parameters specifying provisions relating to the optional and mandatory early termination of a CapFloor transaction.

### 1.11.3 Used by:

- Element: capFloor

### 1.11.4 Derived Types:

## 1.12 Cashflows

### 1.12.1 Description:

A type defining the cashflow representation of a swap trade.

### 1.12.2 Contents:

**cashflowsMatchParameters** (exactly one occurrence; of the type `xsd:boolean`) A true/false flag to indicate whether the cashflows match the parametric definition of the stream, i.e. whether the cashflows could be regenerated from the parameters without loss of information.

**principalExchange** (zero or more occurrences; of the type `PrincipalExchange`) The initial, intermediate and final principal exchange amounts. Typically required on cross currency interest rate swaps where actual exchanges of principal occur. A list of principal exchange elements may be ordered in the document by ascending adjusted principal exchange date. An FpML document containing an unordered principal exchange list is still regarded as a conformant document.

**paymentCalculationPeriod** (zero or more occurrences; of the type `PaymentCalculationPeriod`) The adjusted payment date and associated calculation period parameters required to calculate the actual or projected payment amount. A list of payment calculation period elements may be ordered in the document by ascending adjusted payment date. An FpML document containing an unordered list of payment calculation periods is still regarded as a conformant document.

### 1.12.3 Used by:

- Complex type: `InterestRateStream`

## 1.13 CashPriceMethod

### 1.13.1 Description:

A type defining the parameters necessary for each of the ISDA cash price methods for cash settlement.

### 1.13.2 Contents:

**cashSettlementReferenceBanks** (zero or one occurrence; of the type CashSettlementReferenceBanks) A container for a set of reference institutions. These reference institutions may be called upon to provide rate quotations as part of the method to determine the applicable cash settlement amount. If institutions are not specified, it is assumed that reference institutions will be agreed between the parties on the exercise date, or in the case of swap transaction to which mandatory early termination is applicable, the cash settlement valuation date.

**cashSettlementCurrency** (exactly one occurrence; of the type Currency) The currency in which the cash settlement amount will be calculated and settled.

**quotationRateType** (exactly one occurrence; of the type QuotationRateTypeEnum) Which rate quote is to be observed, either Bid, Mid, Offer or Exercising Party Pays. The meaning of Exercising Party Pays is defined in the 2000 ISDA Definitions, Section 17.2. Certain Definitions Relating to Cash Settlement, paragraph (j)

### 1.13.3 Used by:

## 1.14 CashSettlement

### 1.14.1 Description:

A type to define the cash settlement terms for a product where cash settlement is applicable.

### 1.14.2 Contents:

**cashSettlementValuationTime** (zero or one occurrence; of the type BusinessCenterTime) The time of the cash settlement valuation date when the cash settlement amount will be determined according to the cash settlement method if the parties have not otherwise been able to agree the cash settlement amount.

**cashSettlementValuationDate** (zero or one occurrence; of the type RelativeDateOffset) The date on which the cash settlement amount will be determined according to the cash settlement method if the parties have not otherwise been able to agree the cash settlement amount.

**cashSettlementPaymentDate** (zero or one occurrence; of the type CashSettlementPaymentDate) The date on which the cash settlement amount will be paid, subject to adjustment in accordance with any applicable business day convention. This component would not be present for a mandatory early termination provision where the cash settlement payment date is the mandatory early termination date.

Either

**cashPriceMethod** (exactly one occurrence; of the type CashPriceMethod) An ISDA defined cash settlement method used for the determination of the applicable cash settlement amount. The method is defined in the 2000 ISDA Definitions, Section 17.3. Cash Settlement Methods, paragraph (a).

Or

**cashPriceAlternateMethod** (exactly one occurrence; of the type CashPriceMethod) An ISDA defined cash settlement method used for the determination of the applicable cash settlement amount. The method is defined in the 2000 ISDA Definitions, Section 17.3. Cash Settlement Methods, paragraph (b).

Or

**parYieldCurveAdjustedMethod** (exactly one occurrence; of the type YieldCurveMethod) An ISDA defined cash settlement method used for the determination of the applicable cash settlement amount. The method is defined in the 2000 ISDA Definitions, Section 17.3. Cash Settlement Methods, paragraph (c).

Or

**zeroCouponYieldAdjustedMethod** (exactly one occurrence; of the type YieldCurveMethod) An ISDA defined cash settlement method used for the determination of the applicable cash settlement amount. The method is defined in the 2000 ISDA Definitions, Section 17.3. Cash Settlement Methods, paragraph (d).

Or

**parYieldCurveUnadjustedMethod** (exactly one occurrence; of the type YieldCurveMethod) An ISDA defined cash settlement method used for the determination of the applicable cash settlement amount. The method is defined in the 2000 ISDA Definitions, Section 17.3. Cash Settlement Methods, paragraph (e).

## 1.15 CashSettlementPaymentDate

### 1.15.1 Description:

A type defining the cash settlement payment date(s) as either a set of explicit dates, together with applicable adjustments, or as a date relative to some other (anchor) date, or as any date in a range of contiguous business days.

### 1.15.2 Contents:

Either

**adjustableDates** (exactly one occurrence; of the type AdjustableDates) A series of dates that shall be subject to adjustment if they would otherwise fall on a day that is not a business day in the specified business centers, together with the convention for adjusting the date.

Or

**relativeDate** (exactly one occurrence; of the type RelativeDateOffset) A date specified as some offset to another date (the anchor date).

Or

**businessDateRange** (exactly one occurrence; of the type BusinessDateRange) A range of contiguous business days.

### 1.15.3 Used by:

- Complex type: CashSettlement

### 1.15.4 Derived Types:

      </xsd:annotation>
    </xsd:element>
  </xsd:choice>
  <xsd:attribute name="id" type="xsd:ID"/>
</xsd:complexType>
```

## 1.16 DateRelativeToPaymentDates

### 1.16.1 Description:

A type to provide the ability to point to multiple payment nodes in the document through the unbounded paymentDatesReference.

### 1.16.2 Contents:

**paymentDatesReference** (one or more occurrences; of the type PaymentDatesReference) A set of href pointers to payment dates defined somewhere else in the document.

### 1.16.3 Used by:

- Complex type: FxFixingDate

### 1.16.4 Derived Types:

### 1.16.5 Figure:

### 1.16.6 Schema Fragment:

```
<xsd:complexType name="DateRelativeToPaymentDates">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A type to provide the ability to point to multiple payment nodes

          else in the document.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
  </xsd:sequence>
</xsd:complexType>
```

## 1.17 Discounting

### 1.17.1 Description:

A type defining discounting information. The 2000 ISDA definitions, section 8.4. discounting (related to the calculation of a discounted fixed amount or floating amount) apply. This type must only be included if discounting applies.

### 1.17.2 Contents:

**discountingType** (exactly one occurrence; of the type DiscountingTypeEnum) The discounting method that is applicable.

**discountRate** (zero or one occurrence; of the type xsd:decimal) A discount rate, expressed as a decimal, to be used in the calculation of a discounted amount. A discount amount of 5% would be represented as 0.05.

**discountRateDayCountFraction** (zero or one occurrence; of the type DayCountFraction) A discount day count fraction to be used in the calculation of a discounted amount.

### 1.17.3 Used by:

- Complex type: Calculation

### 1.17.4 Derived Types:

### 1.17.5 Figure:

### 1.17.6 Schema Fragment:

## 1.18 EarlyTerminationEvent

### 1.18.1 Description:

A type to define the adjusted dates associated with an early termination provision.

### 1.18.2 Contents:

**adjustedExerciseDate** (exactly one occurrence; of the type xsd:date) The date on which option exercise takes place. This date should already be adjusted for any applicable business day convention.

**adjustedEarlyTerminationDate** (exactly one occurrence; of the type xsd:date) The early termination date that is applicable if an early termination provision is exercised. This date should already be adjusted for any applicable business day convention.

**adjustedCashSettlementValuationDate** (exactly one occurrence; of the type xsd:date) The date by which the cash settlement amount must be agreed. This date should already be adjusted for any applicable business day convention.

**adjustedCashSettlementPaymentDate** (exactly one occurrence; of the type xsd:date) The date on which the cash settlement amount is paid. This date should already be adjusted for any applicable business day convention.

**adjustedExerciseFeePaymentDate** (zero or one occurrence; of the type xsd:date) The date on which the exercise fee amount is paid. This date should already be adjusted for any applicable business day convention.

### 1.18.3 Used by:

- Complex type: OptionalEarlyTerminationAdjustedDates

  </xsd:choice>
  <xsd:attribute name="id" type="xsd:ID"/>
</xsd:complexType>
```

## 1.20 ExerciseEvent

### 1.20.1 Description:

A type defining the adjusted dates associated with a particular exercise event.

### 1.20.2 Contents:

**adjustedExerciseDate** (exactly one occurrence; of the type xsd:date) The date on which option exercise takes place. This date should already be adjusted for any applicable business day convention.

**adjustedRelevantSwapEffectiveDate** (exactly one occurrence; of the type xsd:date) The effective date of the underlying swap associated with a given exercise date. This date should already be adjusted for any applicable business day convention.

**adjustedCashSettlementValuationDate** (zero or one occurrence; of the type xsd:date) The date by which the cash settlement amount must be agreed. This date should already be adjusted for any applicable business day convention.

**adjustedCashSettlementPaymentDate** (zero or one occurrence; of the type xsd:date) The date on which the cash settlement amount is paid. This date should already be adjusted for any applicable business day convention.

**adjustedExerciseFeePaymentDate** (zero or one occurrence; of the type xsd:date) The date on which the exercise fee amount is paid. This date should already be adjusted for any applicable business day convention.

### 1.20.3 Used by:

- Complex type: SwaptionAdjustedDates

### 1.20.4 Derived Types:

### 1.20.5 Figure:

### 1.20.6 Schema Fragment:

## 1.21 ExercisePeriod

### 1.21.1 Description:

This defines the time interval to the start of the exercise period, i.e. the earliest exercise date, and the frequency of subsequent exercise dates (if any).

### 1.21.2 Contents:

**earliestExerciseDateTenor** (exactly one occurrence; of the type Interval) The time interval to the first (and possibly only) exercise date in the exercise period.

**exerciseFrequency** (zero or one occurrence; of the type Interval) The frequency of subsequent exercise dates in the exercise period following the earliest exercise date. An interval of 1 day should be used to indicate an American style exercise period.

### 1.21.3 Used by:

### 1.21.4 Derived Types:

### 1.21.5 Figure:

### 1.21.6 Schema Fragment:

```
<xsd:complexType name="ExercisePeriod">

    </xsd:element>
  </xsd:sequence>
  <xsd:attribute name="id" type="xsd:ID"/>
</xsd:complexType>
```

## 1.22 ExtendibleProvision

### 1.22.1 Description:

A type defining an option to extend an existing swap transaction on the specified exercise dates for a term ending on the specified new termination date.

### 1.22.2 Contents:

**buyerPartyReference** (exactly one occurrence; of the type PartyOrTradeSideReference) A reference to the party that buys this instrument, ie. pays for this instrument and receives the rights defined by it. See 2000 ISDA definitions Article 11.1 (b). In the case of FRAs this the fixed rate payer.

**sellerPartyReference** (exactly one occurrence; of the type PartyOrTradeSideReference) A reference to the party that sells ("writes") this instrument, i.e. that grants the rights defined by this instrument and in return receives a payment for it. See 2000 ISDA definitions Article 11.1 (a). In the case of FRAs this is the floating rate payer.

**exercise** (exactly one occurrence; of the type Exercise) An placeholder for the actual option exercise definitions.

**exerciseNotice** (zero or one occurrence; of the type ExerciseNotice) Definition of the party to whom notice of exercise should be given.

**followUpConfirmation** (exactly one occurrence; of the type xsd:boolean) A flag to indicate whether follow-up confirmation of exercise (written or electronic) is required following telephonic notice by the buyer to the seller or seller's agent.

**extendibleProvisionAdjustedDates** (zero or one occurrence; of the type ExtendibleProvisionAdjustedDates) The adjusted dates associated with an extendible provision. These dates have been adjusted for any applicable business day convention.

### 1.22.3 Used by:

- Complex type: Swap

### 1.22.4 Derived Types:

### 1.22.5 Figure:

### 1.22.6 Schema Fragment:

          exercise date.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
  </xsd:sequence>
</xsd:complexType>
```

## 1.24 ExtensionEvent

### 1.24.1 Description:

A type to define the adjusted dates associated with an individual extension event.

### 1.24.2 Contents:

**adjustedExerciseDate** (exactly one occurrence; of the type xsd:date) The date on which option exercise takes place. This date should already be adjusted for any applicable business day convention.

**adjustedExtendedTerminationDate** (exactly one occurrence; of the type xsd:date) The termination date if an extendible provision is exercised. This date should already be adjusted for any applicable business day convention.

### 1.24.3 Used by:

- Complex type: ExtendibleProvisionAdjustedDates

### 1.24.4 Derived Types:

### 1.24.5 Figure:

    </xsd:element>
  </xsd:sequence>
  <xsd:attribute name="id" type="xsd:ID"/>
</xsd:complexType>
```

## 1.25 FallbackReferencePrice

### 1.25.1 Description:

The method, prioritized by the order it is listed in this element, to get a replacement rate for the disrupted settlement rate option.

### 1.25.2 Contents:

**valuationPostponement** (zero or one occurrence; of the type ValuationPostponement) Specifies how long to wait to get a quote from a settlement rate option upon a price source disruption

**fallbackSettlementRateOption** (zero or more occurrences; of the type SettlementRateOption) This settlement rate option will be used in its place.

**fallbackSurveyValuationPostponement** (zero or one occurrence; of the type Empty) Request rate quotes from the market.

**calculationAgentDetermination** (zero or one occurrence; of the type CalculationAgent) The calculation agent will decide the rate.

### 1.25.3 Used by:

- Complex type: PriceSourceDisruption

## 1.27 FloatingRateDefinition

### 1.27.1 Description:

A type defining parameters associated with a floating rate reset. This type forms part of the cashflows representation of a stream.

### 1.27.2 Contents:

**calculatedRate** (zero or one occurrence; of the type xsd:decimal) The final calculated rate for a calculation period after any required averaging of rates A calculated rate of 5% would be represented as 0.05.

**rateObservation** (zero or more occurrences; of the type RateObservation) The details of a particular rate observation, including the fixing date and observed rate. A list of rate observation elements may be ordered in the document by ascending adjusted fixing date. An FpML document containing an unordered list of rate observations is still regarded as a conformant document.

**floatingRateMultiplier** (zero or one occurrence; of the type xsd:decimal) A rate multiplier to apply to the floating rate. The multiplier can be a positive or negative decimal. This element should only be included if the multiplier is not equal to 1 (one).

**spread** (zero or one occurrence; of the type xsd:decimal) The ISDA Spread, if any, which applies for the calculation period. The spread is a per annum rate, expressed as a decimal. For purposes of determining a calculation period amount, if positive the spread will be added to the floating rate and if negative the spread will be subtracted from the floating rate. A positive 10 basis point (0.1%) spread would be represented as 0.001.

**capRate** (zero or more occurrences; of the type Strike) The cap rate, if any, which applies to the floating rate for the calculation period. The cap rate (strike) is only required where the floating rate on a swap stream is capped at a certain strike level. The cap rate is assumed to be exclusive of any spread and is a per annum rate, expressed as a decimal. A cap rate of 5% would be represented as 0.05.

**floorRate** (zero or more occurrences; of the type Strike) The floor rate, if any, which applies to the floating rate for the calculation period. The floor rate (strike) is only required where the floating rate on a swap stream is floored at a certain strike level. The floor rate is assumed to be exclusive of any spread and is a per annum rate, expressed as a decimal. The floor rate of 5% would be represented as 0.05.

## 1.28 Fra

### 1.28.1 Description:

A type defining a Forward Rate Agreement (FRA) product.

### 1.28.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type Product)

- The base type which all FpML products extend.

**buyerPartyReference** (exactly one occurrence; of the type PartyOrTradeSideReference) A reference to the party that buys this instrument, ie. pays for this instrument and receives the rights defined by it. See 2000 ISDA definitions Article 11.1 (b). In the case of FRAs this the fixed rate payer.

**sellerPartyReference** (exactly one occurrence; of the type PartyOrTradeSideReference) A reference to the party that sells ("writes") this instrument, i.e. that grants the rights defined by this instrument and in return receives a payment for it. See 2000 ISDA definitions Article 11.1 (a). In the case of FRAs this is the floating rate payer.

**adjustedEffectiveDate** (exactly one occurrence; of the type RequiredIdentifierDate) The start date of the calculation period. This date should already be adjusted for any applicable business day convention. This is also the date when the observed rate is applied, the reset date.

**adjustedTerminationDate** (exactly one occurrence; of the type xsd:date) The end date of the calculation period. This date should already be adjusted for any applicable business day convention.

**paymentDate** (exactly one occurrence; of the type AdjustableDate) The payment date. This date is subject to adjustment in accordance with any applicable business day convention.

**fixingDateOffset** (exactly one occurrence; of the type RelativeDateOffset) Specifies the fixing date relative to the reset date in terms of a business days offset and an associated set of financial business centers. Normally these offset calculation rules will be those specified in the ISDA definition for the relevant floating rate index (ISDA's Floating Rate Option). However, non-standard offset calculation rules may apply for a trade if mutually agreed by the principal parties to the transaction. The href attribute on the dateRelativeTo element should reference the id attribute on the adjustedEffectiveDate element.

**dayCountFraction** (exactly one occurrence; of the type DayCountFraction) The day count fraction.

**calculationPeriodNumberOfDays** (exactly one occurrence; of the type xsd:positiveInteger) The number of days from the adjusted effective date to the adjusted termination date calculated in accordance with the applicable day count fraction.

**notional** (exactly one occurrence; of the type Money) The notional amount.

**fixedRate** (exactly one occurrence; of the type xsd:decimal) The calculation period fixed rate. A per annum rate, expressed as a decimal. A fixed rate of 5% would be represented as 0.05.

**floatingRateIndex** (exactly one occurrence; of the type FloatingRateIndex)

**indexTenor** (one or more occurrences; of the type Interval) The ISDA Designated Maturity, i.e. the tenor of the floating rate.

**fraDiscounting** (exactly one occurrence; of the type FraDiscountingEnum) Specifies whether discounting applies and, if so, what type.

## 1.29 FxFixingDate

### 1.29.1 Description:

A type that is extending the Offset structure for providing the ability to specify an FX fixing date as an offset to dates specified somewhere else in the document.

### 1.29.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type Offset)

- A type defining an offset used in calculating a new date relative to a reference date. Currently, the only offsets defined are expected to be expressed as either calendar or business day offsets.

**businessDayConvention** (exactly one occurrence; of the type BusinessDayConventionEnum) The convention for adjusting a date if it would otherwise fall on a day that is not a business day.

Either

**businessCentersReference** (exactly one occurrence; of the type BusinessCentersReference) A pointer style reference to a set of financial business centers defined elsewhere in the document. This set of business centers is used to determine whether a particular day is a business day or not.

Or

**businessCenters** (exactly one occurrence; of the type BusinessCenters)

**dateRelativeToPaymentDates** (exactly one occurrence; of the type DateRelativeToPaymentDates) The payment date references on which settlements in non-deliverable currency are due and will then have to be converted according to the terms specified through the other parts of the nonDeliverableSettlement structure.

### 1.29.3 Used by:

- Complex type: NonDeliverableSettlement

### 1.29.4 Derived Types:

### 1.29.5 Figure:

### 1.29.6 Schema Fragment:

      </xsd:sequence>
    </xsd:extension>
  </xsd:complexContent>
```

</xsd:complexType>

## 1.30 FxLinkedNotionalAmount

### 1.30.1 Description:

A type to describe the cashflow representation for fx linked notionals.

### 1.30.2 Contents:

**resetDate** (zero or one occurrence; of the type xsd:date)

**adjustedFxSpotFixingDate** (zero or one occurrence; of the type xsd:date) The date on which the fx spot rate is observed. This date should already be adjusted for any applicable business day convention.

**observedFxSpotRate** (zero or one occurrence; of the type xsd:decimal) The actual observed fx spot rate.

**notionalAmount** (zero or one occurrence; of the type xsd:decimal) The calculation period notional amount.

### 1.30.3 Used by:

- Complex type: CalculationPeriod

### 1.30.4 Derived Types:

### 1.30.5 Figure:

### 1.30.6 Schema Fragment:

    </xsd:element>
  </xsd:sequence>
</xsd:complexType>
```

## 1.31 FxLinkedNotionalSchedule

### 1.31.1 Description:

A type to describe a notional schedule where each notional that applies to a calculation period is calculated with reference to a notional amount or notional amount schedule in a different currency by means of a spot currency exchange rate which is normally observed at the beginning of each period.

### 1.31.2 Contents:

**constantNotionalScheduleReference** (exactly one occurrence; of the type `ScheduleReference`) A pointer style reference to the associated constant notional schedule defined elsewhere in the document which contains the currency amounts which will be converted into the varying notional currency amounts using the spot currency exchange rate.

**initialValue** (zero or one occurrence; of the type `xsd:decimal`) The initial currency amount for the varying notional.

**varyingNotionalCurrency** (exactly one occurrence; of the type `Currency`) The currency of the varying notional amount, i.e. the notional amount being determined periodically based on observation of a spot currency exchange rate.

**varyingNotionalFixingDates** (exactly one occurrence; of the type `RelativeDateOffset`) The dates on which spot currency exchange rates are observed for purposes of determining the varying notional currency amount that will apply to a calculation period.

**fxSpotRateSource** (exactly one occurrence; of the type `FxSpotRateSource`) The information source and time at which the spot currency exchange rate will be observed.

**varyingNotionalInterimExchangePaymentDates** (exactly one occurrence; of the type `RelativeDateOffset`) The dates on which interim exchanges of notional are paid. Interim exchanges will arise as a result of changes in the spot currency exchange amount or changes in the constant notional schedule (e.g. amortization).

### 1.31.3 Used by:

## 1.32 InflationRateCalculation

### 1.32.1 Description:

A type defining the components specifying an Inflation Rate Calculation

### 1.32.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type FloatingRateCalculation)

- A type defining the floating rate and definitions relating to the calculation of floating rate amounts.

**inflationLag** (exactly one occurrence; of the type Offset) an offsetting period from the payment date which determines the reference period for which the inflation index is onserved.

**indexSource** (exactly one occurrence; of the type RateSourcePage) The reference source such as Reuters or Bloomberg.

**mainPublication** (zero or one occurrence; of the type MainPublication) The current main publication source such as relevant web site or a government body.

**interpolationMethod** (exactly one occurrence; of the type InterpolationMethod) The method used when calculating the Inflation Index Level from multiple points - the most common is Linear.

**initialIndexLevel** (zero or one occurrence; of the type xsd:decimal) initial known index level for the first calculation period.

### 1.32.3 Used by:

## 1.33 InterestRateStream

### 1.33.1 Description:

A type defining the components specifying an interest rate stream, including both a parametric and cashflow representation for the stream of payments.

### 1.33.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type Leg)

- A supertype of leg. All swap legs extend this type.

**payerPartyReference** (exactly one occurrence; of the type PartyOrAccountReference) A reference to the party responsible for making the payments defined by this structure.

**receiverPartyReference** (exactly one occurrence; of the type PartyOrAccountReference) A reference to the party that receives the payments corresponding to this structure.

**calculationPeriodDates** (exactly one occurrence; of the type CalculationPeriodDates) The calculation periods dates schedule.

**paymentDates** (exactly one occurrence; of the type PaymentDates) The payment dates schedule.

**resetDates** (zero or one occurrence; of the type ResetDates) The reset dates schedule. The reset dates schedule only applies for a floating rate stream.

**calculationPeriodAmount** (exactly one occurrence; of the type CalculationPeriodAmount) The calculation period amount parameters.

**stubCalculationPeriodAmount** (zero or one occurrence; of the type StubCalculationPeriodAmount) The stub calculation period amount parameters. This element must only be included if there is an initial or final stub calculation period. Even then, it must only be included if either the stub references a different floating rate tenor to the regular calculation periods, or if the stub is calculated as a linear interpolation of two different floating rate tenors, or if a specific stub rate or stub amount has been negotiated.

**principalExchanges** (zero or one occurrence; of the type PrincipalExchanges) The true/false flags indicating whether initial, intermediate or final exchanges of principal should occur.

**cashflows** (zero or one occurrence; of the type Cashflows) The cashflows representation of the swap stream.

**settlementProvision** (zero or one occurrence; of the type SettlementProvision) A provision that allows the specification of settlement terms, occurring when the settlement currency is different to the notional currency of the trade.

**formula** (zero or one occurrence; of the type Formula) An interest rate derivative formula.

### 1.33.3 Used by:

## 1.35 MandatoryEarlyTermination

### 1.35.1 Description:

A type to define an early termination provision for which exercise is mandatory.

### 1.35.2 Contents:

**mandatoryEarlyTerminationDate** (exactly one occurrence; of the type AdjustableDate) The early termination date associated with a mandatory early termination of a swap.

**calculationAgent** (exactly one occurrence; of the type CalculationAgent) The ISDA Calculation Agent responsible for performing duties associated with an optional early termination.

**cashSettlement** (exactly one occurrence; of the type CashSettlement) If specified, this means that cash settlement is applicable to the transaction and defines the parameters associated with the cash settlement procedure. If not specified, then physical settlement is applicable.

**mandatoryEarlyTerminationAdjustedDates** (zero or one occurrence; of the type MandatoryEarlyTerminationAdjustedDates) The adjusted dates associated with a mandatory early termination provision. These dates have been adjusted for any applicable business day convention.

### 1.35.3 Used by:

### 1.35.4 Derived Types:

### 1.35.5 Figure:

### 1.35.6 Schema Fragment:

## 1.37 NonDeliverableSettlement

### 1.37.1 Description:

A type defining the parameters used when the reference currency of the swapStream is non-deliverable.

### 1.37.2 Contents:

**referenceCurrency** (exactly one occurrence; of the type Currency) The currency in which the swap stream is denominated in.

**fxFixingDate** (exactly one occurrence; of the type FxFixingDate) The fixing date(s) on which the currency rate will be determined for the purpose of specifying the amount in deliverable currency.

**settlementRateOption** (exactly one occurrence; of the type SettlementRateOption) The rate source for the conversion to the settlement currency. This source is specified through a scheme that reflects the terms of the Annex A to the 1998 FX and Currency Option Definitions.

**priceSourceDisruption** (zero or one occurrence; of the type PriceSourceDisruption) A type defining the parameters to get a new quote when a settlement rate option is disrupted.

### 1.37.3 Used by:

- Complex type: SettlementProvision

### 1.37.4 Derived Types:

### 1.37.5 Figure:

```

## 1.38 Notional

### 1.38.1 Description:

An type defining the notional amount or notional amount schedule associated with a swap stream. The notional schedule will be captured explicitly, specifying the dates that the notional changes and the outstanding notional amount that applies from that date. A parametric representation of the rules defining the notional step schedule can optionally be included.

### 1.38.2 Contents:

**notionalStepSchedule** (exactly one occurrence; of the type AmountSchedule) The notional amount or notional amount schedule expressed as explicit outstanding notional amounts and dates. In the case of a schedule, the step dates may be subject to adjustment in accordance with any adjustments specified in calculationPeriodDatesAdjustments.

**notionalStepParameters** (zero or one occurrence; of the type NotionalStepRule) A parametric representation of the notional step schedule, i.e. parameters used to generate the notional schedule.

### 1.38.3 Used by:

- Complex type: Calculation

### 1.38.4 Derived Types:

### 1.38.5 Figure:

### 1.38.6 Schema Fragment:

```
<xsd:complexType name="Notional">

</xsd:complexType>
```

## 1.39 NotionalStepRule

### 1.39.1 Description:

A type defining a parametric representation of the notional step schedule, i.e. parameters used to generate the notional balance on each step date. The step change in notional can be expressed in terms of either a fixed amount or as a percentage of either the initial notional or previous notional amount. This parametric representation is intended to cover the more common amortizing/accreting.

### 1.39.2 Contents:

**calculationPeriodDatesReference** (exactly one occurrence; of the type CalculationPeriodDatesReference) A pointer style reference to the associated calculation period dates component defined elsewhere in the document.

**stepFrequency** (exactly one occurrence; of the type Interval) The frequency at which the step changes occur. This frequency must be a multiple of the stream calculation period frequency.

**firstNotionalStepDate** (exactly one occurrence; of the type xsd:date) Effective date of the first change in notional (i.e. a calculation period start date).

**lastNotionalStepDate** (exactly one occurrence; of the type xsd:date) Effective date of the last change in notional (i.e. a calculation period start date).

Either

**notionalStepAmount** (exactly one occurrence; of the type xsd:decimal) The explicit amount that the notional changes on each step date. This can be a positive or negative amount.

### 1.39.3 Used by:

## 1.40 OptionalEarlyTermination

### 1.40.1 Description:

A type defining an early termination provision where either or both parties have the right to exercise.

### 1.40.2 Contents:

**singlePartyOption** (zero or one occurrence; of the type SinglePartyOption) If optional early termination is not available to both parties then this component specifies the buyer and seller of the option.

**exercise** (exactly one occurrence; of the type Exercise) An placeholder for the actual option exercise definitions.

**exerciseNotice** (zero or more occurrences; of the type ExerciseNotice) Definition of the party to whom notice of exercise should be given.

**followUpConfirmation** (zero or one occurrence; of the type xsd:boolean) A flag to indicate whether follow-up confirmation of exercise (written or electronic) is required following telephonic notice by the buyer to the seller or seller's agent.

**calculationAgent** (exactly one occurrence; of the type CalculationAgent) The ISDA Calculation Agent responsible for performing duties associated with an optional early termination.

**cashSettlement** (exactly one occurrence; of the type CashSettlement) If specified, this means that cash settlement is applicable to the transaction and defines the parameters associated with the cash settlement procedure. If not specified, then physical settlement is applicable.

**optionalEarlyTerminationAdjustedDates** (zero or one occurrence; of the type OptionalEarlyTerminationAdjustedDates) An early termination provision to terminate the trade at fair value where one or both parties have the right to decide on termination.

### 1.40.3 Used by:

## 1.42 PaymentCalculationPeriod

### 1.42.1 Description:

A type defining the adjusted payment date and associated calculation period parameters required to calculate the actual or projected payment amount. This type forms part of the cashflow representation of a swap stream.

### 1.42.2 Contents:

**unadjustedPaymentDate** (zero or one occurrence; of the type xsd:date)

**adjustedPaymentDate** (zero or one occurrence; of the type xsd:date) The adjusted payment date. This date should already be adjusted for any applicable business day convention. This component is not intended for use in trade confirmation but may be specified to allow the fee structure to also serve as a cashflow type component (all dates the Cashflows type are adjusted payment dates).

Either

**calculationPeriod** (one or more occurrences; of the type CalculationPeriod) The parameters used in the calculation of a fixed or floating rate calculation period amount. A list of calculation period elements may be ordered in the document by ascending start date. An FpML document which contains an unordered list of calculation periods is still regarded as a conformant document.

Or

**fixedPaymentAmount** (exactly one occurrence; of the type xsd:decimal) A known fixed payment amount.

**discountFactor** (zero or one occurrence; of the type xsd:decimal) A decimal value representing the discount factor used to calculate the present value of cash flow.

**forecastPaymentAmount** (zero or one occurrence; of the type Money) A monetary amount representing the forecast of the future value of the payment.

**presentValueAmount** (zero or one occurrence; of the type Money) A monetary amount representing the present value of the forecast payment.

### 1.42.3 Used by:

    </xsd:annotation>
</xsd:attribute>
</xsd:complexType>

```

## 1.43 PaymentDates

### 1.43.1 Description:

A type defining parameters used to generate the payment dates schedule, including the specification of early or delayed payments. Payment dates are determined relative to the calculation period dates or the reset dates.

### 1.43.2 Contents:

Either

**calculationPeriodDatesReference** (exactly one occurrence; of the type CalculationPeriodDatesReference) A pointer style reference to the associated calculation period dates component defined elsewhere in the document.

Or

**resetDatesReference** (exactly one occurrence; of the type ResetDatesReference) A pointer style reference to the associated reset dates component defined elsewhere in the document.

**paymentFrequency** (exactly one occurrence; of the type Interval) The frequency at which regular payment dates occur. If the payment frequency is equal to the frequency defined in the calculation period dates component then one calculation period contributes to each payment amount. If the payment frequency is less frequent than the frequency defined in the calculation period dates component then more than one calculation period will contribute to the payment amount. A payment frequency more frequent than the calculation period frequency or one that is not a multiple of the calculation period frequency is invalid.

**firstPaymentDate** (zero or one occurrence; of the type xsd:date) The first unadjusted payment date. This day may be subject to adjustment in accordance with any business day convention specified in paymentDatesAdjustments. This element must only be included if there is an initial stub. This date will normally correspond to an unadjusted calculation period start or end date. This is true even if early or delayed payment is specified to be applicable since the actual first payment date will be the specified number of days before or after the applicable adjusted calculation period start or end date with the resulting payment date then being adjusted in accordance with any business day convention specified in paymentDatesAdjustments.

**lastRegularPaymentDate** (zero or one occurrence; of the type xsd:date) The last regular unadjusted payment date. This day may be subject to adjustment in accordance with any business day convention specified in paymentDatesAdjustments. This element must only be included if there is a final stub. All calculation periods after this date contribute to the final payment. The final payment is made relative to the final set of calculation periods or the final reset date as the case may be. This date will normally correspond to an unadjusted calculation period start or end date. This is true even if early or delayed payment is specified to be applicable since the actual last regular payment date will be the specified number of days before or after the applicable adjusted calculation period start or end date with the resulting payment date then being adjusted in accordance with any business day convention specified in paymentDatesAdjustments.

**payRelativeTo** (exactly one occurrence; of the type PayRelativeToEnum) Specifies whether the payments occur relative to each adjusted calculation period start date, adjusted calculation period end date or each reset date. The reset date is applicable in the case of certain euro (former French Franc) floating rate indices. Calculation period start date means relative to the start of the first calculation period contributing to a given payment. Similarly, calculation period end date means the end of the last calculation period contributing to a given payment.

**paymentDaysOffset** (zero or one occurrence; of the type Offset) If early payment or delayed payment is required, specifies the number of days offset that the payment occurs relative to what would otherwise be the unadjusted payment date. The offset can be specified in terms of either calendar or business days. Even in the case of a calendar days offset, the resulting payment date, adjusted for the specified calendar days offset, will still be adjusted in accordance with the specified payment dates adjustments. This element should only be included if early or delayed payment is applicable, i.e. if the periodMultiplier element value is not equal to zero. An early payment would be indicated by a negative periodMultiplier element value and a delayed payment (or payment lag) would be indicated by a positive periodMultiplier element value.

**paymentDatesAdjustments** (exactly one occurrence; of the type BusinessDayAdjustments) The business day convention to apply to each payment date if it would otherwise fall on a day that is not a business day in the specified financial business centers.

## 1.46 PrincipalExchange

### 1.46.1 Description:

A type defining a principal exchange amount and adjusted exchange date. The type forms part of the cashflow representation of a swap stream.

### 1.46.2 Contents:

**unadjustedPrincipalExchangeDate** (zero or one occurrence; of the type xsd:date)

**adjustedPrincipalExchangeDate** (zero or one occurrence; of the type xsd:date) The principal exchange date. This date should already be adjusted for any applicable business day convention.

**principalExchangeAmount** (zero or one occurrence; of the type xsd:decimal) The principal exchange amount. This amount should be positive if the stream payer is paying the exchange amount and signed negative if they are receiving it.

**discountFactor** (zero or one occurrence; of the type xsd:decimal) The value representing the discount factor used to calculate the present value of the principal exchange amount.

**presentValuePrincipalExchangeAmount** (zero or one occurrence; of the type Money) The amount representing the present value of the principal exchange.

### 1.46.3 Used by:

- Complex type: Cashflows

  </xsd:complexContent>
</xsd:complexType>
```

## 1.48 ResetDates

### 1.48.1 Description:

A type defining the parameters used to generate the reset dates schedule and associated fixing dates. The reset dates are determined relative to the calculation periods schedules dates.

### 1.48.2 Contents:

**calculationPeriodDatesReference** (exactly one occurrence; of the type CalculationPeriodDatesReference) A pointer style reference to the associated calculation period dates component defined elsewhere in the document.

**resetRelativeTo** (zero or one occurrence; of the type ResetRelativeToEnum) Specifies whether the reset dates are determined with respect to each adjusted calculation period start date or adjusted calculation period end date. If the reset frequency is specified as daily this element must not be included.

**initialFixingDate** (zero or one occurrence; of the type RelativeDateOffset)

**fixingDates** (exactly one occurrence; of the type RelativeDateOffset) Specifies the fixing date relative to the reset date in terms of a business days offset and an associated set of financial business centers. Normally these offset calculation rules will be those specified in the ISDA definition for the relevant floating rate index (ISDA's Floating Rate Option). However, non-standard offset calculation rules may apply for a trade if mutually agreed by the principal parties to the transaction. The href attribute on the dateRelativeTo element should reference the id attribute on the resetDates element.

**rateCutOffDaysOffset** (zero or one occurrence; of the type Offset) Specifies the number of business days before the period end date when the rate cut-off date is assumed to apply. The financial business centers associated with determining the rate cut-off date are those specified in the reset dates adjustments. The rate cut-off number of days must be a negative integer (a value of zero would imply no rate cut off applies in which case the rateCutOffDaysOffset element should not be included). The relevant rate for each reset date in the period from, and including, a rate cut-off date to, but excluding, the next applicable period end date (or, in the case of the last calculation period, the termination date) will (solely for purposes of calculating the floating amount payable on the next applicable payment date) be deemed to be the relevant rate in effect on that rate cut-off date. For example, if rate cut-off days for a daily averaging deal is -2 business days, then the refix rate applied on (period end date - 2 days) will also be applied as the reset on (period end date - 1 day), i.e. the actual number of reset dates remains the same but from the rate cut-off date until the period end date, the same refix rate is applied. Note that in the case of several calculation periods contributing to a single payment, the rate cut-off is assumed only to apply to the final calculation period contributing to that payment. The day type associated with the offset must imply a business days offset.

**resetFrequency** (exactly one occurrence; of the type ResetFrequency) The frequency at which reset dates occur. In the case of a weekly reset frequency, also specifies the day of the week that the reset occurs. If the reset frequency is greater than the calculation period frequency then this implies that more than one reset date is established for each calculation period and some form of rate averaging is applicable.

**resetDatesAdjustments** (exactly one occurrence; of the type BusinessDayAdjustments) The business day convention to apply to each reset date if it would otherwise fall on a day that is not a business day in the specified financial business centers.

### 1.48.3 Used by:

## 1.50 SettlementProvision

### 1.50.1 Description:

A type defining the specification of settlement terms, occurring when the settlement currency is different to the notional currency of the trade.

### 1.50.2 Contents:

**settlementCurrency** (exactly one occurrence; of the type Currency) The currency that stream settles in (to support swaps that settle in a currency different from the notional currency).

**nonDeliverableSettlement** (zero or one occurrence; of the type NonDeliverableSettlement) The specification of the non-deliverable settlement provision.

### 1.50.3 Used by:

- Complex type: InterestRateStream

### 1.50.4 Derived Types:

### 1.50.5 Figure:

  </xsd:simpleContent>
</xsd:complexType>
```

## 1.52 SinglePartyOption

### 1.52.1 Description:

A type describing the buyer and seller of an option.

### 1.52.2 Contents:

**buyerPartyReference** (exactly one occurrence; of the type PartyOrTradeSideReference) A reference to the party that buys this instrument, ie. pays for this instrument and receives the rights defined by it. See 2000 ISDA definitions Article 11.1 (b). In the case of FRAs this the fixed rate payer.

**sellerPartyReference** (exactly one occurrence; of the type PartyOrTradeSideReference) A reference to the party that sells ("writes") this instrument, i.e. that grants the rights defined by this instrument and in return receives a payment for it. See 2000 ISDA definitions Article 11.1 (a). In the case of FRAs this is the floating rate payer.

### 1.52.3 Used by:

- Complex type: OptionalEarlyTermination

### 1.52.4 Derived Types:

### 1.52.5 Figure:

### 1.52.6 Schema Fragment:

```
<xsd:complexType name="SinglePartyOption">
  <xsd:annotation>

    <xsd:group ref="BuyerSeller.model"/>
  </xsd:sequence>
</xsd:complexType>
```

## 1.53 StubCalculationPeriodAmount

### 1.53.1 Description:

A type defining how the initial or final stub calculation period amounts is calculated. For example, the rate to be applied to the initial or final stub calculation period may be the linear interpolation of two different tenors for the floating rate index specified in the calculation period amount component, e.g. A two month stub period may use the linear interpolation of a one month and three month floating rate. The different rate tenors would be specified in this component. Note that a maximum of two rate tenors can be specified. If a stub period uses a single index tenor and this is the same as that specified in the calculation period amount component then the initial stub or final stub component, as the case may be, must not be included.

### 1.53.2 Contents:

**calculationPeriodDatesReference** (exactly one occurrence; of the type CalculationPeriodDatesReference) A pointer style reference to the associated calculation period dates component defined elsewhere in the document.

Either

**finalStub** (exactly one occurrence; of the type StubValue) Specifies how the final stub amount is calculated. A single floating rate tenor different to that used for the regular part of the calculation periods schedule may be specified, or two floating tenors may be specified. If two floating rate tenors are specified then Linear Interpolation (in accordance with the 2000 ISDA Definitions, Section 8.3. Interpolation) is assumed to apply. Alternatively, an actual known stub rate or stub amount may be specified.

### 1.53.3 Used by:

- Complex type: InterestRateStream

### 1.53.4 Derived Types:

### 1.53.5 Figure:

### 1.53.6 Schema Fragment:

## 1.54 Swap

### 1.54.1 Description:

A type defining swap streams and additional payments between the principal parties involved in the swap.

### 1.54.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type Product)

- The base type which all FpML products extend.

**swapStream** (one or more occurrences; of the type InterestRateStream) The swap streams.

**earlyTerminationProvision** (zero or one occurrence; of the type EarlyTerminationProvision) Parameters specifying provisions relating to the optional and mandatory early termination of a swap transaction.

**cancelableProvision** (zero or one occurrence; of the type CancelableProvision) A provision that allows the specification of an embedded option within a swap giving the buyer of the option the right to terminate the swap, in whole or in part, on the early termination date.

**extendibleProvision** (zero or one occurrence; of the type ExtendibleProvision) A provision that allows the specification of an embedded option with a swap giving the buyer of the option the right to extend the swap, in whole or in part, to the extended termination date.

**additionalPayment** (zero or more occurrences; of the type Payment) Additional payments between the principal parties.

**additionalTerms** (zero or one occurrence; of the type SwapAdditionalTerms) Contains any additional terms to the swap contract.

### 1.54.3 Used by:

```

## 1.56 Swaption

### 1.56.1 Description:

A type to define an option on a swap.

### 1.56.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type Product)

- The base type which all FpML products extend.

**buyerPartyReference** (exactly one occurrence; of the type PartyOrTradeSideReference) A reference to the party that buys this instrument, ie. pays for this instrument and receives the rights defined by it. See 2000 ISDA definitions Article 11.1 (b). In the case of FRAs this the fixed rate payer.

**sellerPartyReference** (exactly one occurrence; of the type PartyOrTradeSideReference) A reference to the party that sells ("writes") this instrument, i.e. that grants the rights defined by this instrument and in return receives a payment for it. See 2000 ISDA definitions Article 11.1 (a). In the case of FRAs this is the floating rate payer.

**premium** (zero or more occurrences; of the type Payment) The option premium amount payable by buyer to seller on the specified payment date.

**exercise** (exactly one occurrence; of the type Exercise) An placeholder for the actual option exercise definitions.

**exerciseProcedure** (zero or one occurrence; of the type ExerciseProcedure) A set of parameters defining procedures associated with the exercise.

**calculationAgent** (zero or one occurrence; of the type CalculationAgent) The ISDA Calculation Agent responsible for performing duties associated with an optional early termination.

**cashSettlement** (zero or one occurrence; of the type CashSettlement) If specified, this means that cash settlement is applicable to the transaction and defines the parameters associated with the cash settlement procedure. If not specified, then physical settlement is applicable.

**swaptionStraddle** (exactly one occurrence; of the type xsd:boolean) Whether the option is a swaption or a swaption straddle.

**swaptionAdjustedDates** (zero or one occurrence; of the type SwaptionAdjustedDates) The adjusted dates associated with swaption exercise. These dates have been adjusted for any applicable business day convention.

**swap** (exactly one occurrence; of the type Swap) A swap product definition.

### 1.56.3 Used by:

- Element: swaption

### 1.56.4 Derived Types:

### 1.56.5 Figure:

### 1.56.6 Schema Fragment:

</xsd:complexType>

```

## 1.57 SwaptionAdjustedDates

### 1.57.1 Description:

A type describing the adjusted dates associated with swaption exercise and settlement.

### 1.57.2 Contents:

**exerciseEvent** (one or more occurrences; of the type ExerciseEvent) The adjusted dates associated with an individual swaption exercise date.

### 1.57.3 Used by:

- Complex type: Swaption

### 1.57.4 Derived Types:

### 1.57.5 Figure:

### 1.57.6 Schema Fragment:

```
<xsd:complexType name="SwaptionAdjustedDates">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A type describing the adjusted dates associated with swaption
      exercise and settlement.
    </xsd:documentation>
  </xsd:annotation>

    <xsd:element name="exerciseEvent" type="ExerciseEvent" maxOccurs="unbounded">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          The adjusted dates associated with an individual swaption
          exercise date.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
  </xsd:sequence>
</xsd:complexType>
```

## 1.58 ValuationPostponement

### 1.58.1 Description:

Specifies how long to wait to get a quote from a settlement rate option upon a price source disruption.

### 1.58.2 Contents:

**maximumDaysOfPostponement** (exactly one occurrence; of the type `xsd:positiveInteger`) The maximum number of days to wait for a quote from the disrupted settlement rate option before proceeding to the next method.

### 1.58.3 Used by:

- Complex type: `FallbackReferencePrice`

### 1.58.4 Derived Types:

### 1.58.5 Figure:

### 1.58.6 Schema Fragment:

```
<xsd:complexType name="ValuationPostponement">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      Specifies how long to wait to get a quote from a settlement rate
      option upon a price source disruption.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:sequence>
    <xsd:element name="maximumDaysOfPostponement" type="xsd:positiveInteger">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          The maximum number of days to wait for a quote from the
          disrupted settlement rate option before proceeding to the next
          method.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
  </xsd:sequence>
</xsd:complexType>
```

## 1.59 YieldCurveMethod

### 1.59.1 Description:

A type defining the parameters required for each of the ISDA defined yield curve methods for cash settlement.

### 1.59.2 Contents:

### 1.59.3 Used by:

- Complex type: CashSettlement

### 1.59.4 Derived Types:

### 1.59.5 Figure:

### 1.59.6 Schema Fragment:

```
<xsd:complexType name="YieldCurveMethod">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A type defining the parameters required for each of the ISDA
      defined yield curve methods for cash settlement.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:sequence>
    <xsd:sequence>
      <xsd:element name="settlementRateSource" type="SettlementRateSource" minOccurs="0">
        <xsd:annotation>
          <xsd:documentation xml:lang="en">
            The method for obtaining a settlement rate. This may be
            from some information source (e.g. Reuters) or from a set
            of reference banks.
          </xsd:documentation>
        </xsd:annotation>
      </xsd:element>
      <xsd:element name="quotationRateType" type="QuotationRateTypeEnum">
        <xsd:annotation>
          <xsd:documentation xml:lang="en">
            Which rate quote is to be observed, either Bid, Mid, Offer
            or Exercising Party Pays. The meaning of Exercising Party
            Pays is defined in the 2000 ISDA Definitions, Section 17.2.
            Certain Definitions Relating to Cash Settlement, paragraph
            (j)
          </xsd:documentation>
        </xsd:annotation>
      </xsd:element>
    </xsd:sequence>
  </xsd:sequence>
</xsd:complexType>
```

## ***2 Global Elements***

## **2.1 bulletPayment**

### **2.1.1 Description:**

A product to represent a single known payment.

### **2.1.2 Contents:**

Element bulletPayment is defined by the complex type BulletPayment

### **2.1.3 Used by:**

### **2.1.4 Substituted by:**

### **2.1.5 Figure:**

### **2.1.6 Schema Fragment:**

```
<xsd:element name="bulletPayment" type="BulletPayment" substitutionGroup="product">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A product to represent a single known payment.
    </xsd:documentation>
  </xsd:annotation>
</xsd:element>
```

## **2.2 capFloor**

### **2.2.1 Description:**

A cap, floor or cap floor structures product definition.

### **2.2.2 Contents:**

Element capFloor is defined by the complex type CapFloor

### **2.2.3 Used by:**

### **2.2.4 Substituted by:**

### **2.2.5 Figure:**

### **2.2.6 Schema Fragment:**

```
<xsd:element name="capFloor" type="CapFloor" substitutionGroup="product">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A cap, floor or cap floor structures product definition.
    </xsd:documentation>
  </xsd:annotation>
</xsd:element>
```

## 2.3 floatingRateCalculation

### 2.3.1 Description:

A floating rate calculation definition.

### 2.3.2 Contents:

Element floatingRateCalculation is defined by the complex type FloatingRateCalculation

### 2.3.3 Used by:

### 2.3.4 Substituted by:

### 2.3.5 Figure:

### 2.3.6 Schema Fragment:

```
<xsd:element name="floatingRateCalculation" type="FloatingRateCalculation" substitutionGroup="r">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A floating rate calculation definition.
    </xsd:documentation>
  </xsd:annotation>
</xsd:element>
```

## **2.4 fra**

### **2.4.1 Description:**

A forward rate agreement product definition.

### **2.4.2 Contents:**

Element fra is defined by the complex type Fra

### **2.4.3 Used by:**

### **2.4.4 Substituted by:**

### **2.4.5 Figure:**

### **2.4.6 Schema Fragment:**

```
<xsd:element name="fra" type="Fra" substitutionGroup="product">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A forward rate agreement product definition.
    </xsd:documentation>
  </xsd:annotation>
</xsd:element>
```

## 2.5 inflationRateCalculation

### 2.5.1 Description:

An inflation rate calculation definition.

### 2.5.2 Contents:

Element inflationRateCalculation is defined by the complex type InflationRateCalculation

### 2.5.3 Used by:

### 2.5.4 Substituted by:

### 2.5.5 Figure:

### 2.5.6 Schema Fragment:

```
<xsd:element name="inflationRateCalculation" type="InflationRateCalculation" substitutionGroup="InflationRateCalculation" base="InflationRateCalculation" >
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      An inflation rate calculation definition.
    </xsd:documentation>
  </xsd:annotation>
</xsd:element>
```

## 2.6 rateCalculation

### 2.6.1 Description:

The base element for the floating rate calculation definitions.

### 2.6.2 Contents:

Element rateCalculation is defined by the complex type Rate

### 2.6.3 Used by:

- Complex type: Calculation

### 2.6.4 Substituted by:

- Element: floatingRateCalculation
- Element: inflationRateCalculation

### 2.6.5 Figure:

### 2.6.6 Schema Fragment:

```
<xsd:element name="rateCalculation" type="Rate" abstract="true">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      The base element for the floating rate calculation definitions.
    </xsd:documentation>
  </xsd:annotation>
</xsd:element>
```

## 2.7 swap

### 2.7.1 Description:

A swap product definition.

### 2.7.2 Contents:

Element swap is defined by the complex type Swap

### 2.7.3 Used by:

- Complex type: Swaption

### 2.7.4 Substituted by:

### 2.7.5 Figure:

### 2.7.6 Schema Fragment:

```
<xsd:element name="swap" type="Swap" substitutionGroup="product">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A swap product definition.
    </xsd:documentation>
  </xsd:annotation>
</xsd:element>
```

## **2.8 swaption**

### **2.8.1 Description:**

A swaption product definition.

### **2.8.2 Contents:**

Element swaption is defined by the complex type Swaption

### **2.8.3 Used by:**

### **2.8.4 Substituted by:**

### **2.8.5 Figure:**

### **2.8.6 Schema Fragment:**

```
<xsd:element name="swaption" type="Swaption" substitutionGroup="product">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A swaption product definition.
    </xsd:documentation>
  </xsd:annotation>
</xsd:element>
```

## **3 Groups**

## 3.1 MandatoryEarlyTermination.model

### 3.1.1 Description:

### 3.1.2 Contents:

Either

**mandatoryEarlyTermination** (exactly one occurrence; of the type MandatoryEarlyTermination) A mandatory early termination provision to terminate the swap at fair value.

### 3.1.3 Used by:

- Complex type: EarlyTerminationProvision

### 3.1.4 Figure:

### 3.1.5 Schema Fragment:

```
<xsd:group name="MandatoryEarlyTermination.model">

    <xsd:element name="mandatoryEarlyTermination" type="MandatoryEarlyTermination">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          A mandatory early termination provision to terminate the swap
          at fair value.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
    <xsd:sequence>
      <xsd:element name="mandatoryEarlyTerminationDateTenor" type="Interval">
        <xsd:annotation>
          <xsd:documentation xml:lang="en">
            Period after trade date of the mandatory early termination
            date.
          </xsd:documentation>
        </xsd:annotation>
      </xsd:element>
      <xsd:element name="mandatoryEarlyTermination" type="MandatoryEarlyTermination" minOccurs="1">
        <xsd:annotation>
          <xsd:documentation xml:lang="en">
            A mandatory early termination provision to terminate the
            swap at fair value.
          </xsd:documentation>
        </xsd:annotation>
      </xsd:element>
    </xsd:sequence>
  </xsd:choice>
</xsd:group>
```

## 3.2 OptionalEarlyTermination.model

### 3.2.1 Description:

### 3.2.2 Contents:

Either

**optionalEarlyTermination** (exactly one occurrence; of the type OptionalEarlyTermination) An option for either or both parties to terminate the swap at fair value.

### 3.2.3 Used by:

- Complex type: EarlyTerminationProvision

### 3.2.4 Figure:

### 3.2.5 Schema Fragment:

```
<xsd:group name="OptionalEarlyTermination.model">

    <xsd:element name="rateCutOffDaysOffset" type="Offset" minOccurs="0">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          Specifies the number of business days before the period end
          date when the rate cut-off date is assumed to apply. The
          financial business centers associated with determining the
          rate cut-off date are those specified in the reset dates

```

adjustments. The rate cut-off number of days must be a negative integer (a value of zero would imply no rate cut off applies in which case the rateCutOffDaysOffset element should not be included). The relevant rate for each reset date in the period from, and including, a rate cut-off date to, but excluding, the next applicable period end date (or, in the case of the last calculation period, the termination date) will (solely for purposes of calculating the floating amount payable on the next applicable payment date) be deemed to be the relevant rate in effect on that rate cut-off date. For example, if rate cut-off days for a daily averaging deal is -2 business days, then the refix rate applied on (period end date - 2 days) will also be applied as the reset on (period end date - 1 day), i.e. the actual number of reset dates remains the same but from the rate cut-off date until the period end date, the same refix rate is applied. Note that in the case of several calculation periods contributing to a single payment, the rate cut-off is assumed only to apply to the final calculation period contributing to that payment. The day type associated with the offset must imply a business days offset.

# ***1 Global Complex Types***

## 1.1 DealIdentifier

### 1.1.1 Description:

The reference to an agreement entered into between the borrower, the lenders, the agent, and other financial parties that describes the terms and conditions of the loan being made to the borrower and the obligations and requirements for the borrower, its related entities (if any), and the lenders. List of Ids should include at least CUSIP (if exists) and system Id of the system that generates the notice.

### 1.1.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type Product)

- The base type which all FpML products extend.

**dealName** (zero or one occurrence; of the type xsd:string) Usually defined as Legal Borrower Name + Credit Agreement Date (mm/yyyy)

**creditAgreementDate** (zero or one occurrence; of the type xsd:date) The credit agreement date is the closing date (the date where the agreement has been signed) for the loans in the credit agreement. Funding of the facilities occurs on (or sometimes a little after) the Credit Agreement date.

### 1.1.3 Used by:

- Complex type: LoanContract

### 1.1.4 Derived Types:

### 1.1.5 Figure:

### 1.1.6 Schema Fragment:

```
<xsd:complexType name="DealIdentifier">

</xsd:complexType>
```

## 1.2 DrawdownNotice

### 1.2.1 Description:

The notification from the agent bank to lender that loan contract is requested by the borrower. A loan contract notice will be created by the agent bank for each of the lenders

### 1.2.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type LoanContractNotice)

- Template for all loan contract notices.

**drawdownEventType** (exactly one occurrence; of the type DrawdownEventTypeEnum)

**drawdownPayment** (exactly one occurrence; of the type DrawdownPayment)

**party** (one or more occurrences; of the type Party)

### 1.2.3 Used by:

### 1.2.4 Derived Types:

### 1.2.5 Figure:

### 1.2.6 Schema Fragment:

  </xsd:complexContent>
</xsd:complexType>
```

## 1.3 DrawdownPayment

### 1.3.1 Description:

Lender portion of the drawdown payment

### 1.3.2 Contents:

**paymentDate** (exactly one occurrence; of the type xsd:date) The date on which the principal payment is made by the lender to the agent bank. Usually defaults to the effective date of the loan contract.

**shareLoanContractAmount** (exactly one occurrence; of the type Money)

### 1.3.3 Used by:

- Complex type: DrawdownNotice

### 1.3.4 Derived Types:

### 1.3.5 Figure:

### 1.3.6 Schema Fragment:

```
<xsd:complexType name="DrawdownPayment">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      Lender portion of the drawdown payment
    </xsd:documentation>
  </xsd:annotation>
  <xsd:sequence>
    <xsd:element name="paymentDate" type="xsd:date">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          The date on which the principal payment is made by the lender
          to the agent bank. Usually defaults to the effective date of
          the loan contract.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
    <xsd:element name="shareLoanContractAmount" type="Money" />
  </xsd:sequence>
</xsd:complexType>
```

## 1.4 FacilityCommitmentPosition

### 1.4.1 Description:

Represents current and prior facility commitment amount on both global and lender position levels

### 1.4.2 Contents:

**currentAmount** (exactly one occurrence; of the type ParticipationAmount)

**priorAmount** (exactly one occurrence; of the type ParticipationAmount)

**loanContractPosition** (zero or more occurrences; of the type LoanContractPosition)

### 1.4.3 Used by:

### 1.4.4 Derived Types:

### 1.4.5 Figure:

### 1.4.6 Schema Fragment:

```
<xsd:complexType name="FacilityCommitmentPosition">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      Represents current and prior facility commitment amount on both
      global and lender position levels
    </xsd:documentation>
  </xsd:annotation>
  <xsd:sequence>
    <xsd:element name="currentAmount" type="ParticipationAmount"/>
    <xsd:element name="priorAmount" type="ParticipationAmount"/>
    <xsd:element name="loanContractPosition" type="LoanContractPosition" minOccurs="0" maxOccurs="unbounded"/>
  </xsd:sequence>
</xsd:complexType>
```

## 1.5 FacilityIdentifier

### 1.5.1 Description:

The reference to a single credit limit within a loan deal. Also known as tranche. List of Ids should include at least CUSIP (if exists) and system Id of the system that generates the notice.

### 1.5.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type Product)

- The base type which all FpML products extend.

**facilityName** (zero or one occurrence; of the type xsd:string) Usually defined as Legal Borrower Name + Credit Agreement Date (mm/yyyy)

**currency** (zero or one occurrence; of the type Currency) Facility denomination currency.

**originalCommitmentAmount** (zero or one occurrence; of the type xsd:decimal) Original global commitment amount of the facility.

### 1.5.3 Used by:

- Complex type: LoanContract

### 1.5.4 Derived Types:

### 1.5.5 Figure:

### 1.5.6 Schema Fragment:

```
<xsd:complexType name="FacilityIdentifier">
  <xsd:annotation>

        </xsd:element>
      </xsd:sequence>
    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

## 1.6 FacilityNotice

### 1.6.1 Description:

Template for all facility notices.

### 1.6.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type NotificationMessage)

- A type defining the basic content for a message sent to inform another system that some 'business event' has occurred. Notifications are not expected to be replied to.

**noticeDate** (exactly one occurrence; of the type xsd:date)

**agentBankPartyReference** (zero or one occurrence; of the type PartyReference)

**borrowerPartyReference** (zero or one occurrence; of the type PartyReference)

**lenderPartyReference** (zero or one occurrence; of the type PartyReference)

**dealIdentifier** (exactly one occurrence; of the type DealIdentifier)

**facilityIdentifier** (exactly one occurrence; of the type FacilityIdentifier)

**facilityCommitmentPosition** (zero or one occurrence; of the type FacilityCommitmentPosition)

**comments** (zero or one occurrence; of the type xsd:string) Manually-entered field which will be used by human users only.

### 1.6.3 Used by:

- Complex type: OneOffFeeNotice
- Complex type: OnGoingFeeNotice
- Complex type: RepaymentConfirmationNotice
- Complex type: RepaymentNotice

### 1.6.4 Derived Types:

- Complex type: OneOffFeeNotice
- Complex type: OnGoingFeeNotice
- Complex type: RepaymentConfirmationNotice
- Complex type: RepaymentNotice

### 1.6.5 Figure:

### 1.6.6 Schema Fragment:

```
<xsd:complexType name="FacilityNotice" abstract="true">

        <xsd:group ref="FacilityNoticeDetails.model"/>
      </xsd:sequence>
    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

## 1.7 FacilityRepayment

### 1.7.1 Description:

Lender share of the borrower re-payment

### 1.7.2 Contents:

**refusalAllowed** (zero or one occurrence; of the type xsd:boolean) Defines whether the lender has an option to accept or deny the payment

**adjustsCommitment** (zero or one occurrence; of the type xsd:boolean) Defines whether repayment comes with commitment adjustments

**breakageCost** (zero or one occurrence; of the type BreakageCostEnum) When breakage cost is applicable, defines who is calculating it.

**repaymentDate** (exactly one occurrence; of the type xsd:date) Date on which principal repayment was paid to the lender by the agent bank>

**amount** (exactly one occurrence; of the type ParticipationAmount) Global and share amount

### 1.7.3 Used by:

- Complex type: Repayment

### 1.7.4 Derived Types:

### 1.7.5 Figure:

### 1.7.6 Schema Fragment:

```
<xsd:complexType name="FacilityRepayment">

## 1.8 FeeAccrualPeriod

### 1.8.1 Description:

The period for accrual fee calculation where fee rate and underlying position amount (commitment, utilization or unutilized) is constant

### 1.8.2 Contents:

**startDate** (exactly one occurrence; of the type xsd:date) Date on which this period begins.

**endDate** (exactly one occurrence; of the type xsd:date) Date on which this period ends.

**accrualAmount** (zero or one occurrence; of the type ParticipationAmount) >Global and lender share accrued fee amount.

### 1.8.3 Used by:

- Complex type: FeeAccrualSchedule

### 1.8.4 Derived Types:

### 1.8.5 Figure:

### 1.8.6 Schema Fragment:

      </xsd:annotation>
    </xsd:element>
  </xsd:sequence>
</xsd:complexType>
```

## 1.9 FeeAccrualSchedule

### 1.9.1 Description:

The details of the underlying elements that effects the calculation of the accrual of the particular fee.

### 1.9.2 Contents:

Either

**lenderCommitmentPeriod** (one or more occurrences; of the type LenderPositionPeriod) The minimal period where both lender and global commitment amounts remain constant.

Or

**lenderUtilizationPeriod** (one or more occurrences; of the type LenderPositionPeriod) The minimal period where both lender and global utilization amounts remain constant..

Or

**lenderUnutilizedPeriod** (one or more occurrences; of the type LenderPositionPeriod) The minimal period where both lender and global unutilized amounts remain constant.

**feeRatePeriod** (one or more occurrences; of the type RatePeriod) The minimal period where the fee rate remains constant.

**feeAccrualPeriod** (one or more occurrences; of the type FeeAccrualPeriod) The minimal period where all the factors effecting the fee accrual are constant.

### 1.9.3 Used by:

- Complex type: OnGoingFeeNotice

### 1.9.4 Derived Types:

### 1.9.5 Figure:

### 1.9.6 Schema Fragment:

</xsd:complexType>
```

## 1.11 InterestAccrualPeriod

### 1.11.1 Description:

A period with constant interest rate within which the lender maintains certain position

### 1.11.2 Contents:

**startDate** (exactly one occurrence; of the type xsd:date) Date on which this period begins.

**endDate** (exactly one occurrence; of the type xsd:date) Date on which this period ends.

**shareLoanContractAmount** (exactly one occurrence; of the type Money) Lender share of a loan contract.

**shareInterestAccrualAmount** (exactly one occurrence; of the type Money) Accrued Interest over the period

**sharePikAccrualAmount** (zero or one occurrence; of the type Money) Accrued PIK over the period

### 1.11.3 Used by:

- Complex type: InterestAccrualSchedule

### 1.11.4 Derived Types:

  </xsd:complexContent>
</xsd:complexType>
```

## 1.15 InterestRatePeriod

### 1.15.1 Description:

Interest rate information per rate period

### 1.15.2 Contents:

**rateFixingDate** (exactly one occurrence; of the type xsd:date) Date on which the underlying interest rate is fixed. Should default to effective date of the loan contract in the case of PRIME underlying.

**startDate** (exactly one occurrence; of the type xsd:date) Date on which this period begins.

**endDate** (exactly one occurrence; of the type xsd:date) Date on which this period ends.

**floatingRateIndex** (exactly one occurrence; of the type FloatingRateIndex)

**indexTenor** (zero or one occurrence; of the type Interval) The ISDA Designated Maturity, i.e. the tenor of the floating rate.

**interestRate** (zero or one occurrence; of the type xsd:decimal)

**margin** (zero or one occurrence; of the type xsd:decimal)

**miaCost** (zero or one occurrence; of the type Money) Mandatory Liquid Asset Cost, charged by the FSA, applicable for UK funded loan contracts only.

**allInRate** (zero or one occurrence; of the type xsd:decimal) (Interest Rate + Margin + Mandatory Liquid Asset Cost) = All In Rate.

**interestDayBasis** (zero or one occurrence; of the type DayCountFraction) The day count basis for the interest period.

**tenor** (zero or one occurrence; of the type Interval) The number of business days in the interest rate period

### 1.15.3 Used by:

- Complex type: InterestAccrualSchedule
- Complex type: LoanContract

## 1.16 LenderLoanContractPeriod

### 1.16.1 Description:

A period within which the lender maintains certain loan contract position

### 1.16.2 Contents:

**startDate** (exactly one occurrence; of the type xsd:date) Date on which this period begins.

**endDate** (exactly one occurrence; of the type xsd:date) Date on which this period ends.

**shareCommitmentAmount** (zero or one occurrence; of the type Money) Current lender share.

**shareLoanContractAmount** (exactly one occurrence; of the type Money) Lender share of a loan contract. This is based on the share of the overall commitment that the lender is assigned.

### 1.16.3 Used by:

- Complex type: InterestAccrualSchedule

### 1.16.4 Derived Types:

### 1.16.5 Figure:

### 1.16.6 Schema Fragment:

```
<xsd:complexType name="LenderLoanContractPeriod">

## 1.18 LoanContract

### 1.18.1 Description:

A basic structure describing an outstanding loan agreement between borrower and lenders made within a facility under a deal. Examples: loan contract, letter of credit, bank acceptance

### 1.18.2 Contents:

**loanContractIdentifier** (exactly one occurrence; of the type LoanContractIdentifier)

**dealIdentifier** (exactly one occurrence; of the type DealIdentifier)

**facilityIdentifier** (exactly one occurrence; of the type FacilityIdentifier) Set of fields identifying instrument.

**borrowerPartyReference** (exactly one occurrence; of the type PartyReference) There could be multiple borrowers against a loan contract however the agents have been trying to promote the concept of an administrative borrower. Hence, only one being shown in the field list.

**amount** (exactly one occurrence; of the type Money) An amount associated with the loan contract with loan contract currency.

**effectiveDate** (exactly one occurrence; of the type xsd:date) Effective date of the loan contract. This is the date on which the funds are passed to the borrower.

**conditionsPrecedentMet** (zero or one occurrence; of the type xsd:boolean) The flag defining whether conditions precedent defined in the credit agreement is met and borrower can start drawing against deal facilities.

**conditionsPrecedentComment** (zero or one occurrence; of the type xsd:string) A free text field defining the reasons why conditions precedent has not been met.

**fxTerms** (zero or one occurrence; of the type FxTerms) Defines FX exchange rate when loan contract and facility currencies are different.>

**currentInterestRatePeriod** (zero or one occurrence; of the type InterestRatePeriod) The current interest period defining interest rate on the contract>

**interestPaymentTenor** (zero or one occurrence; of the type Interval) The frequency in which interest payments made, as defined in the credit agreement.>

**nextInterestPaymentDate** (zero or one occurrence; of the type xsd:date) Next interest payment is due on this date.>

### 1.18.3 Used by:

- Complex type: LoanContractNotice

## 1.19 LoanContractIdentifier

### 1.19.1 Description:

A basic set of fields to identify the loan contract

### 1.19.2 Contents:

**identifier** (one or more occurrences; of the type ContractIdentifier)

**originalAmount** (zero or one occurrence; of the type Money) Original amount associated with the loan contract in loan contract currency.

**maturityDate** (zero or one occurrence; of the type xsd:date) Maturity date of the loan contract. In the case of an ABR loan this field should be set to the maturity date of the facility.>

### 1.19.3 Used by:

- Complex type: LoanContract
- Complex type: LoanContractNotice
- Complex type: LoanContractPosition
- Complex type: LoanContractRepayment
- Complex type: OneOffFeeNotice

### 1.19.4 Derived Types:

### 1.19.5 Figure:

### 1.19.6 Schema Fragment:

</xsd:complexType>
```

## 1.20 LoanContractNotice

### 1.20.1 Description:

Template for all loan contract notices.

### 1.20.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type NotificationMessage)

- A type defining the basic content for a message sent to inform another system that some 'business event' has occurred. Notifications are not expected to be replied to.

**noticeDate** (exactly one occurrence; of the type xsd:date)

**agentBankPartyReference** (zero or one occurrence; of the type PartyReference)

**borrowerPartyReference** (zero or one occurrence; of the type PartyReference)

**lenderPartyReference** (zero or one occurrence; of the type PartyReference)

**dealIdentifier** (exactly one occurrence; of the type DealIdentifier)

**facilityIdentifier** (exactly one occurrence; of the type FacilityIdentifier)

**facilityCommitmentPosition** (zero or one occurrence; of the type FacilityCommitmentPosition)

**comments** (zero or one occurrence; of the type xsd:string) Manually-entered field which will be used by human users only.

Either

**loanContract** (exactly one occurrence; of the type LoanContract)

Or

**loanContractIdentifier** (exactly one occurrence; of the type LoanContractIdentifier)

### 1.20.3 Used by:

- Complex type: DrawdownNotice
- Complex type: InterestPaymentNotice

### 1.20.4 Derived Types:

- Complex type: DrawdownNotice
- Complex type: InterestPaymentNotice

### 1.20.5 Figure:

### 1.20.6 Schema Fragment:

```
<xsd:complexType name="LoanContractNotice" abstract="true">

          <xsd:element name="loanContractIdentifier" type="LoanContractIdentifier"/>
        </xsd:choice>
      </xsd:sequence>
    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

## 1.21 LoanContractPosition

### 1.21.1 Description:

Represents outstanding loan amounts on both global and lender position levels

### 1.21.2 Contents:

**loanContractIdentifier** (exactly one occurrence; of the type LoanContractIdentifier)

**currentAmount** (exactly one occurrence; of the type ParticipationAmount)

**priorAmount** (exactly one occurrence; of the type ParticipationAmount)

### 1.21.3 Used by:

- Complex type: FacilityCommitmentPosition

### 1.21.4 Derived Types:

### 1.21.5 Figure:

### 1.21.6 Schema Fragment:

    <xsd:element name="loanContractIdentifier" type="LoanContractIdentifier"/>
    <xsd:element name="currentAmount" type="ParticipationAmount"/>
    <xsd:element name="priorAmount" type="ParticipationAmount"/>
  </xsd:sequence>
</xsd:complexType>
```

## 1.22 LoanContractRepayment

### 1.22.1 Description:

The amount of principal repayment associated with a single loan contract

### 1.22.2 Contents:

**loanContractIdentifier** (exactly one occurrence; of the type LoanContractIdentifier)

**amount** (exactly one occurrence; of the type ParticipationAmount) The amount of the repayment associated with this loan contract.

**interestPaidWithRepayment** (exactly one occurrence; of the type InterestPaidWithRepaymentEnum) Defines the option of paying interest on repayment date.

### 1.22.3 Used by:

- Complex type: Repayment

### 1.22.4 Derived Types:

### 1.22.5 Figure:

### 1.22.6 Schema Fragment:

    <xsd:element name="loanContractIdentifier" type="LoanContractIdentifier"/>
    <xsd:element name="amount" type="ParticipationAmount">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          The amount of the repayment associated with this loan
          contract.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
    <xsd:element name="interestPaidWithRepayment" type="InterestPaidWithRepaymentEnum">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          Defines the option of paying interest on repayment date.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
  </xsd:sequence>
</xsd:complexType>
```

## 1.23 OneOffFeeNotice

### 1.23.1 Description:

There are cases where the borrower may be required to make a one-off fee payment. This will usually be based on a certain business event occurring. The rules as to how much is charged will be stated in the credit agreement. The only fee type covered in this section is amendment Fee: A fee charged to the borrower for an amendment being made to the originally agreed credit agreement. The fee is based on a rate (as stated in the agreement) applied to the current commitment level.

### 1.23.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type FacilityNotice)

- Template for all facility notices.

**loanContractIdentifier** (zero or one occurrence; of the type LoanContractIdentifier)

**feePayment** (exactly one occurrence; of the type OneOffFeePayment)

**party** (one or more occurrences; of the type Party)

### 1.23.3 Used by:

### 1.23.4 Derived Types:

### 1.23.5 Figure:

      </xsd:annotation>
    </xsd:element>
  </xsd:sequence>
</xsd:complexType>
```

## 1.25 OnGoingFeeNotice

### 1.25.1 Description:

The agent bank will request that the borrower makes a fee payment in accordance with the credit agreement. The borrower will make a payment to the agent bank after which the agent bank will calculate each lenders fee amounts. It is important to note that these fees are all calculated based on facility level information. The fee types are Commitment Fee, Utilization Fee, Facility Fee, Letter of Credit Fee.

### 1.25.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type FacilityNotice)

- Template for all facility notices.

**feePayment** (exactly one occurrence; of the type OnGoingFeePayment)

**feeAccrualSchedule** (exactly one occurrence; of the type FeeAccrualSchedule)

**party** (one or more occurrences; of the type Party)

### 1.25.3 Used by:

## 1.26 OnGoingFeePayment

### 1.26.1 Description:

The details of a payment made by the borrower to the agent bank related to a given onGoing facility fee.

### 1.26.2 Contents:

**feeType** (exactly one occurrence; of the type OnGoingFeeTypeEnum) Type of the fee

**startDate** (exactly one occurrence; of the type xsd:date) Date on which this period begins.

**endDate** (exactly one occurrence; of the type xsd:date) Date on which this period ends.

**feeDayBasis** (zero or one occurrence; of the type DayCountFraction) The day count basis for the fee calculation period.

**paymentDate** (exactly one occurrence; of the type xsd:date) The day on which the fee is paid by the borrower to the agent bank.

**amount** (exactly one occurrence; of the type ParticipationAmount) The fee amount paid by the borrower to the agent bank.

### 1.26.3 Used by:

- Complex type: OnGoingFeeNotice

## 1.27 ParticipationAmount

### 1.27.1 Description:

Generic type to capture global and share amounts

### 1.27.2 Contents:

**globalAmount** (zero or one occurrence; of the type Money)

**shareAmount** (exactly one occurrence; of the type Money)

### 1.27.3 Used by:

- Complex type: FacilityCommitmentPosition
- Complex type: FacilityRepayment
- Complex type: FeeAccrualPeriod
- Complex type: InterestPayment
- Complex type: LenderPositionPeriod
- Complex type: LoanContractPosition
- Complex type: LoanContractRepayment
- Complex type: OneOffFeePayment
- Complex type: OnGoingFeePayment

### 1.27.4 Derived Types:

### 1.27.5 Figure:

### 1.27.6 Schema Fragment:

```
<xsd:complexType name="ParticipationAmount">

    <xsd:element name="shareAmount" type="Money"/>
  </xsd:sequence>
</xsd:complexType>
```

## 1.28 PikPeriod

### 1.28.1 Description:

A period with a constant PIK percentage - the percentage of margin capitalized.

### 1.28.2 Contents:

**startDate** (exactly one occurrence; of the type xsd:date) Date on which this period begins.

**endDate** (exactly one occurrence; of the type xsd:date) Date on which this period ends.

**pikMarginPercent** (exactly one occurrence; of the type xsd:decimal) The percentage of marging that will be capitalized.

### 1.28.3 Used by:

- Complex type: InterestAccrualSchedule

### 1.28.4 Derived Types:

### 1.28.5 Figure:

### 1.28.6 Schema Fragment:

```
<xsd:complexType name="PikPeriod">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">

          The percentage of marging that will be capitalized.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
  </xsd:sequence>
</xsd:complexType>
```

## 1.29 RatePeriod

### 1.29.1 Description:

Rate information per rate period

### 1.29.2 Contents:

**startDate** (exactly one occurrence; of the type xsd:date) Date on which this period begins.

**endDate** (exactly one occurrence; of the type xsd:date) Date on which this period ends.

**rate** (exactly one occurrence; of the type xsd:decimal) >Rate for this period

### 1.29.3 Used by:

- Complex type: FeeAccrualSchedule

### 1.29.4 Derived Types:

### 1.29.5 Figure:

### 1.29.6 Schema Fragment:

      </xsd:annotation>
    </xsd:element>
  </xsd:sequence>
</xsd:complexType>
```

## 1.30 Repayment

### 1.30.1 Description:

Lender share of the borrower re-payment

### 1.30.2 Contents:

**facilityRepayment** (exactly one occurrence; of the type FacilityRepayment)

**loanContractRepayment** (one or more occurrences; of the type LoanContractRepayment)

### 1.30.3 Used by:

- Complex type: RepaymentNotice

### 1.30.4 Derived Types:

### 1.30.5 Figure:

### 1.30.6 Schema Fragment:

```
<xsd:complexType name="Repayment">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      Lender share of the borrower re-payment

    <xsd:element name="loanContractRepayment" type="LoanContractRepayment" maxOccurs="unbounded"/>
  </xsd:sequence>
</xsd:complexType>
```

## 1.31 RepaymentConfirmationNotice

### 1.31.1 Description:

Confirmation notice on whether the lender has accepted or rejected the borrower's request for unsheduled principal repayment

### 1.31.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type FacilityNotice)

- Template for all facility notices.

**confirmationType** (exactly one occurrence; of the type LoanRepaymentConfirmEnum) Defines whether the lender is accepting in ful, partially accepting or denying repayment

**shareRepaymentAmount** (exactly one occurrence; of the type Money) Repayment amount agreed to be accepted by the specific lender.

**party** (one or more occurrences; of the type Party)

### 1.31.3 Used by:

### 1.31.4 Derived Types:

### 1.31.5 Figure:

### 1.31.6 Schema Fragment:

```

  </xsd:complexContent>
</xsd:complexType>
```

## ***2 Groups***

## 2.1 FacilityNoticeDetails.model

### 2.1.1 Description:

### 2.1.2 Contents:

**noticeDate** (exactly one occurrence; of the type xsd:date)

**agentBankPartyReference** (zero or one occurrence; of the type PartyReference)

**borrowerPartyReference** (zero or one occurrence; of the type PartyReference)

**lenderPartyReference** (zero or one occurrence; of the type PartyReference)

**dealIdentifier** (exactly one occurrence; of the type DealIdentifier)

**facilityIdentifier** (exactly one occurrence; of the type FacilityIdentifier)

**facilityCommitmentPosition** (zero or one occurrence; of the type FacilityCommitmentPosition)

**comments** (zero or one occurrence; of the type xsd:string) Manually-entered field which will be used by human users only.

### 2.1.3 Used by:

- Complex type: FacilityNotice
- Complex type: LoanContractNotice

### 2.1.4 Figure:

### 2.1.5 Schema Fragment:

# ***1 Global Complex Types***

## 1.1 CompoundingFrequency

### 1.1.1 Description:

The frequency at which a rate is compounded.

### 1.1.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type xsd:normalizedString)

•

### 1.1.3 Used by:

- Complex type: ZeroRateCurve

### 1.1.4 Derived Types:

### 1.1.5 Figure:

### 1.1.6 Schema Fragment:

```
<xsd:complexType name="CompoundingFrequency">
  <xsd:annotation>
    <xsd:documentation source="http://www.FpML.org" xml:lang="en">
      The frequency at which a rate is compounded.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:simpleContent>
    <xsd:extension base="xsd:normalizedString">
      <xsd:attribute name="compoundingFrequencyScheme" type="xsd:anyURI" default="http://www.fpm
    </xsd:extension>
  </xsd:simpleContent>
</xsd:complexType>
```

## 1.2 CreditCurve

### 1.2.1 Description:

A generic credit curve definition.

### 1.2.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type PricingStructure)

- An abstract pricing structure base type. Used as a base for structures such as yield curves and volatility matrices..

**creditEvents** (zero or one occurrence; of the type CreditEvents) The material credit event.

**seniority** (exactly one occurrence; of the type CreditSeniority) The level of seniority of the deliverable obligation.

**secured** (exactly one occurrence; of the type xsd:boolean) Whether the deliverable obligation is secured or unsecured.

**currency** (exactly one occurrence; of the type Currency) The currency of denomination of the deliverable obligation.

**obligations** (zero or one occurrence; of the type Obligations) The underlying obligations of the reference entity on which you are buying or selling protection

**deliverableObligations** (zero or one occurrence; of the type DeliverableObligations) What sort of obligation may be delivered in the event of the credit event. ISDA 2003 Term: Obligation Category/Deliverable Obligation Category

### 1.2.3 Used by:

- Element: creditCurve

### 1.2.4 Derived Types:

### 1.2.5 Figure:

### 1.2.6 Schema Fragment:

```
<xsd:complexType name="CreditCurve">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A generic credit curve definition.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:complexContent>
    <xsd:extension base="PricingStructure">
      <xsd:sequence>
        <xsd:group ref="CreditCurveCharacteristics.model" minOccurs="0"/>
      </xsd:sequence>
    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

## 1.3 CreditCurveValuation

### 1.3.1 Description:

A set of credit curve values, which can include pricing inputs (which are typically credit spreads), default probabilities, and recovery rates.

### 1.3.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type PricingStructureValuation)

- An abstract pricing structure valuation base type. Used as a base for values of pricing structures such as yield curves and volatility matrices. Derived from the "Valuation" type.

**inputs** (zero or one occurrence; of the type QuotedAssetSet)

**defaultProbabilityCurve** (zero or one occurrence; of the type DefaultProbabilityCurve) A curve of default probabilities.

Either

**recoveryRate** (exactly one occurrence; of the type xsd:decimal) A single recovery rate, to be used for all terms.

Or

**recoveryRateCurve** (exactly one occurrence; of the type TermCurve) A curve of recovery rates, allowing different terms to have different recovery rates.

### 1.3.3 Used by:

- Element: creditCurveValuation

### 1.3.4 Derived Types:

### 1.3.5 Figure:

### 1.3.6 Schema Fragment:

```
<xsd:complexType name="CreditCurveValuation">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A set of credit curve values, which can include pricing inputs
      (which are typically credit spreads), default probabilities, and
      recovery rates.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:complexContent>
    <xsd:extension base="PricingStructureValuation">
      <xsd:sequence>
        <xsd:element name="inputs" type="QuotedAssetSet" minOccurs="0"/>
        <xsd:element name="defaultProbabilityCurve" type="DefaultProbabilityCurve" minOccurs="0">
          <xsd:annotation>
            <xsd:documentation xml:lang="en">
              A curve of default probabilities.
            </xsd:documentation>
          </xsd:annotation>
        </xsd:element>
        <xsd:group ref="RecoveryRate.model" minOccurs="0">
          <xsd:annotation>
            <xsd:documentation xml:lang="en">
              A recovery rate value or curve.
            </xsd:documentation>
          </xsd:annotation>
        </xsd:group>
      </xsd:sequence>
    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

## 1.4 DefaultProbabilityCurve

### 1.4.1 Description:

A set of default probabilities.

### 1.4.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type PricingStructureValuation)

- An abstract pricing structure valuation base type. Used as a base for values of pricing structures such as yield curves and volatility matrices. Derived from the "Valuation" type.

**baseYieldCurve** (exactly one occurrence; of the type PricingStructureReference) A reference to the yield curve values used as a basis for this credit curve valuation.

**defaultProbabilities** (zero or one occurrence; of the type TermCurve) A collection of default probabilities.

### 1.4.3 Used by:

- Complex type: CreditCurveValuation

### 1.4.4 Derived Types:

### 1.4.5 Figure:

### 1.4.6 Schema Fragment:

```
<xsd:complexType name="DefaultProbabilityCurve">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A set of default probabilities.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:complexContent>

            <xsd:documentation xml:lang="en">
              A reference to the yield curve values used as a basis for
              this credit curve valuation.
            </xsd:documentation>
          </xsd:annotation>
        </xsd:element>
        <xsd:element name="defaultProbabilities" type="TermCurve" minOccurs="0">
          <xsd:annotation>
            <xsd:documentation xml:lang="en">
              A collection of default probabilities.
            </xsd:documentation>
          </xsd:annotation>
        </xsd:element>
      </xsd:sequence>
    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

## 1.5 ForwardRateCurve

### 1.5.1 Description:

A curve used to model a set of forward interest rates. Used for forecasting interest rates as part of a pricing calculation.

### 1.5.2 Contents:

**assetReference** (zero or one occurrence; of the type AssetReference) A reference to the rate index whose forwards are modeled.

**rateCurve** (exactly one occurrence; of the type TermCurve) The curve of forward values.

### 1.5.3 Used by:

- Complex type: YieldCurveValuation

### 1.5.4 Derived Types:

### 1.5.5 Figure:

### 1.5.6 Schema Fragment:

```
<xsd:complexType name="ForwardRateCurve">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A curve used to model a set of forward interest rates. Used for
      forecasting interest rates as part of a pricing calculation.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:sequence>
    <xsd:element name="assetReference" type="AssetReference" minOccurs="0">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          A reference to the rate index whose forwards are modeled.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
    <xsd:element name="rateCurve" type="TermCurve">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          The curve of forward values.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
  </xsd:sequence>
</xsd:complexType>
```

## 1.6 FxCurve

### 1.6.1 Description:

An fx curve object., which includes pricing inputs and term structures for fx forwards.

### 1.6.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type PricingStructure)

- An abstract pricing structure base type. Used as a base for structures such as yield curves and volatility matrices..

**quotedCurrencyPair** (exactly one occurrence; of the type QuotedCurrencyPair) Defines the two currencies for an FX trade and the quotation relationship between the two currencies.

### 1.6.3 Used by:

- Element: fxCurve

### 1.6.4 Derived Types:

### 1.6.5 Figure:

### 1.6.6 Schema Fragment:

```
<xsd:complexType name="FxCurve">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      An fx curve object., which includes pricing inputs and term
      structures for fx forwards.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:complexContent>
    <xsd:extension base="PricingStructure">
      <xsd:sequence>
        <xsd:group ref="FxCurveCharacteristics.model" minOccurs="0"/>
      </xsd:sequence>
    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

## 1.7 FxCurveValuation

### 1.7.1 Description:

A valuation of an FX curve object., which includes pricing inputs and term structures for fx forwards.

### 1.7.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type PricingStructureValuation)

- An abstract pricing structure valuation base type. Used as a base for values of pricing structures such as yield curves and volatility matrices. Derived from the "Valuation" type.

**settlementCurrencyYieldCurve** (zero or one occurrence; of the type PricingStructureReference)

**forecastCurrencyYieldCurve** (zero or one occurrence; of the type PricingStructureReference)

**spotRate** (zero or one occurrence; of the type FxRateSet)

**fxForwardCurve** (zero or one occurrence; of the type TermCurve) A curve of fx forward rates

**fxForwardPointsCurve** (zero or one occurrence; of the type TermCurve) A curve of fx forward point spreads.

### 1.7.3 Used by:

- Element: fxCurveValuation

### 1.7.4 Derived Types:

### 1.7.5 Figure:

### 1.7.6 Schema Fragment:

```
<xsd:complexType name="FxCurveValuation">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A valuation of an FX curve object., which includes pricing inputs
      and term structures for fx forwards.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:complexContent>
    <xsd:extension base="PricingStructureValuation">

        <xsd:element name="forecastCurrencyYieldCurve" type="PricingStructureReference" minOccurs="0"/>
        <xsd:element name="spotRate" type="FxRateSet" minOccurs="0"/>
        <xsd:element name="fxForwardCurve" type="TermCurve" minOccurs="0">
          <xsd:annotation>
            <xsd:documentation xml:lang="en">
              A curve of fx forward rates
            </xsd:documentation>
          </xsd:annotation>
        </xsd:element>
        <xsd:element name="fxForwardPointsCurve" type="TermCurve" minOccurs="0">
          <xsd:annotation>
            <xsd:documentation xml:lang="en">
              A curve of fx forward point spreads.
            </xsd:documentation>
          </xsd:annotation>
        </xsd:element>
      </xsd:sequence>
    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

## 1.8 FxRateSet

### 1.8.1 Description:

A collection of spot FX rates used in pricing.

### 1.8.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type QuotedAssetSet)

- A collection of quoted assets.

### 1.8.3 Used by:

- Complex type: FxCurveValuation

### 1.8.4 Derived Types:

### 1.8.5 Figure:

### 1.8.6 Schema Fragment:

```
<xsd:complexType name="FxRateSet">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A collection of spot FX rates used in pricing.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:complexContent>
    <xsd:extension base="QuotedAssetSet">
      <xsd:sequence/>
    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

## 1.9 MultiDimensionalPricingData

### 1.9.1 Description:

A pricing data set that contains a series of points with coordinates. It is a sparse matrix representation of a multi-dimensional matrix.

### 1.9.2 Contents:

**measureType** (zero or one occurrence; of the type AssetMeasureType) The type of the value that is measured. This could be an NPV, a cash flow, a clean price, etc.

**quoteUnits** (zero or one occurrence; of the type PriceQuoteUnits) The optional units that the measure is expressed in. If not supplied, this is assumed to be a price/value in currency units.

**side** (zero or one occurrence; of the type QuotationSideEnum) The side (bid/mid/ask) of the measure.

**currency** (zero or one occurrence; of the type Currency) The optional currency that the measure is expressed in. If not supplied, this is defaulted from the reportingCurrency in the valuationScenarioDefinition.

**timing** (zero or one occurrence; of the type QuoteTiming) When during a day the quote is for. Typically, if this element is supplied, the QuoteLocation needs also to be supplied.

**informationSource** (zero or more occurrences; of the type InformationSource) The information source where a published or displayed market rate will be obtained, e.g. Telerate Page 3750.

**time** (zero or one occurrence; of the type xsd:dateTime) When the quote was observed or derived.

**valuationDate** (zero or one occurrence; of the type xsd:date) When the quote was computed.

**expiryTime** (zero or one occurrence; of the type xsd:dateTime) When does the quote cease to be valid.

**cashFlowType** (zero or one occurrence; of the type CashflowType) For cash flows, the type of the cash flows. Examples include: Coupon payment, Premium Fee, Settlement Fee, Brokerage Fee, etc.

**point** (one or more occurrences; of the type PricingStructurePoint)

### 1.9.3 Used by:

- Complex type: VolatilityMatrix

### 1.9.4 Derived Types:

### 1.9.5 Figure:

### 1.9.6 Schema Fragment:

```
<xsd:complexType name="MultiDimensionalPricingData">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A pricing data set that contains a series of points with
      coordinates. It is a sparse matrix representation of a
      multi-dimensional matrix.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:sequence>
    <xsd:group ref="QuotationCharacteristics.model" minOccurs="0">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          Characteristics that apply to all quotations in the pricing
          structure.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:group>
    <xsd:element name="point" type="PricingStructurePoint" maxOccurs="unbounded"/>
  </xsd:sequence>
</xsd:complexType>
```

## 1.10 ParametricAdjustment

### 1.10.1 Description:

An adjustment used to accommodate a parameter of the input trade, e.g. the strike.

### 1.10.2 Contents:

**name** (exactly one occurrence; of the type xsd:normalizedString) The name of the adjustment parameter (e.g. "Volatility Skew").

**inputUnits** (zero or one occurrence; of the type PriceQuoteUnits) The units of the input parameter, e.g. Yield.

**datapoint** (one or more occurrences; of the type ParametricAdjustmentPoint) The values of the adjustment parameter.

### 1.10.3 Used by:

- Complex type: VolatilityMatrix

### 1.10.4 Derived Types:

### 1.10.5 Figure:

### 1.10.6 Schema Fragment:

```
<xsd:complexType name="ParametricAdjustment">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      An adjustment used to accommodate a parameter of the input trade,
      e.g. the strike.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:sequence>
    <xsd:element name="name" type="xsd:normalizedString">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          The name of the adjustment parameter (e.g. "Volatility
          Skew").
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
    <xsd:element name="inputUnits" type="PriceQuoteUnits" minOccurs="0">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          The units of the input parameter, e.g. Yield.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
    <xsd:element name="datapoint" type="ParametricAdjustmentPoint" maxOccurs="unbounded">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          The values of the adjustment parameter.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
  </xsd:sequence>
</xsd:complexType>
```

## 1.11 ParametricAdjustmentPoint

### 1.11.1 Description:

A value of the adjustment point, consisting of the x value and the corresponding y value.

### 1.11.2 Contents:

**parameterValue** (exactly one occurrence; of the type xsd:decimal) The value of the independent variable (e.g. strike offset).

**adjustmentValue** (exactly one occurrence; of the type xsd:decimal) The value of the dependent variable, the actual adjustment amount.

### 1.11.3 Used by:

- Complex type: ParametricAdjustment

### 1.11.4 Derived Types:

### 1.11.5 Figure:

### 1.11.6 Schema Fragment:

```
<xsd:complexType name="ParametricAdjustmentPoint">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A value of the adjustment point, consisting of the x value and
      the corresponding y value.

  </xsd:annotation>
  <xsd:sequence>
    <xsd:element name="parameterValue" type="xsd:decimal">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          The value of the independent variable (e.g. strike offset).
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
    <xsd:element name="adjustmentValue" type="xsd:decimal">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          The value of the dependent variable, the actual adjustment
          amount.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
  </xsd:sequence>
</xsd:complexType>
```

## 1.12 PricingStructurePoint

### 1.12.1 Description:

A single valued point with a set of coordinates that define an arbitrary number of indentifying indexes (0 or more). Note that the collection of coordinates/coordinate references for a PricingStructurePoint must not define a given dimension (other than "generic") more than once. This is to avoid ambiguity.

### 1.12.2 Contents:

Either

**coordinate** (exactly one occurrence; of the type PricingDataPointCoordinate) An explicit, filled in data point coordinate. This might specify expiration, strike, etc.

Or

**coordinateReference** (exactly one occurrence; of the type PricingDataPointCoordinateReference) A reference to a pricing data point coordinate within this document.

Either

**underlyingAsset** (exactly one occurrence; of the type Asset) Define the underlying asset when it is a listed security.

Or

**underlyingAssetReference** (zero or one occurrence; of the type AssetReference) A reference to an underlying asset that defines the meaning of the value, i.e. the product that the value corresponds to. For example, this could be a caplet or simple european swaption.

**value** (zero or one occurrence; of the type xsd:decimal) The value of the the quotation.

### 1.12.3 Used by:

- Complex type: MultiDimensionalPricingData

### 1.12.4 Derived Types:

### 1.12.5 Figure:

### 1.12.6 Schema Fragment:

```
<xsd:complexType name="PricingStructurePoint">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A single valued point with a set of coordinates that define an
      arbitrary number of indentifying indexes (0 or more). Note that
      the collection of coordinates/coordinate references for a
      PricingStructurePoint must not define a given dimension (other
      than "generic") more than once. This is to avoid ambiguity.

  </xsd:annotation>
  <xsd:sequence>
    <xsd:group ref="PricingCoordinateOrReference.model" minOccurs="0" maxOccurs="unbounded"/>
    <xsd:group ref="UnderlyingAssetOrReference.model" minOccurs="0"/>
    <xsd:group ref="Quotation.model">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          A quotation for a specific point, including anny
          characteristics that may be unique to that point.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:group>
  </xsd:sequence>
  <xsd:attribute name="id" type="xsd:ID"/>
</xsd:complexType>
```

## 1.13 TermCurve

### 1.13.1 Description:

A curve consisting only of values over a term. This is a restricted form of One Dimensional Structure.

### 1.13.2 Contents:

**interpolationMethod** (zero or one occurrence; of the type InterpolationMethod)

**extrapolationPermitted** (zero or one occurrence; of the type xsd:boolean)

**point** (one or more occurrences; of the type TermPoint)

### 1.13.3 Used by:

- Complex type: DefaultProbabilityCurve
- Complex type: ForwardRateCurve
- Complex type: FxCurveValuation
- Complex type: YieldCurveValuation
- Complex type: ZeroRateCurve

### 1.13.4 Derived Types:

### 1.13.5 Figure:

### 1.13.6 Schema Fragment:

```
<xsd:complexType name="TermCurve">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A curve consisting only of values over a term. This is a
      restricted form of One Dimensional Structure.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:sequence>
    <xsd:element name="interpolationMethod" type="InterpolationMethod" minOccurs="0"/>
    <xsd:element name="extrapolationPermitted" type="xsd:boolean" minOccurs="0"/>
    <xsd:element name="point" type="TermPoint" maxOccurs="unbounded"/>
  </xsd:sequence>
</xsd:complexType>
```

## 1.14 TermPoint

### 1.14.1 Description:

A value point that can have a time dimension. Allows bid, mid, ask, and spread values to be represented.

### 1.14.2 Contents:

**term** (exactly one occurrence; of the type TimeDimension) The time dimension of the point (tenor and/or date)

**bid** (zero or one occurrence; of the type xsd:decimal) A price "bid" by a buyer for an asset, i.e. the price a buyer is willing to pay.

**mid** (zero or one occurrence; of the type xsd:decimal) A price midway between the bid and the ask price.

**ask** (zero or one occurrence; of the type xsd:decimal) A price "asked" by a seller for an asset, i.e. the price at which a seller is willing to sell.

**spreadValue** (zero or one occurrence; of the type xsd:decimal) The spread value can be used in conjunction with the "mid" value to define the bid and the ask value.

**definition** (zero or one occurrence; of the type AssetReference) An optional reference to an underlying asset that defines the meaning of the value, i.e. the product that the value corresponds to. For example, this could be a discount instrument.

### 1.14.3 Used by:

- Complex type: TermCurve

### 1.14.4 Derived Types:

### 1.14.5 Figure:

### 1.14.6 Schema Fragment:

  <xsd:attribute name="id" type="xsd:ID"/>
</xsd:complexType>
```

## 1.15 VolatilityMatrix

### 1.15.1 Description:

A matrix of volatilities with dimension 0-3.

### 1.15.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type PricingStructureValuation)

- An abstract pricing structure valuation base type. Used as a base for values of pricing structures such as yield curves and volatility matrices. Derived from the "Valuation" type.

**dataPoints** (exactly one occurrence; of the type MultiDimensionalPricingData) The raw volatility matrix data, expressed as a multi-dimensional array.

**adjustment** (zero or more occurrences; of the type ParametricAdjustment) An adjustment factor, such as for vol smile/skew.

### 1.15.3 Used by:

- Element: volatilityMatrixValuation

### 1.15.4 Derived Types:

### 1.15.5 Figure:

### 1.15.6 Schema Fragment:

```
<xsd:complexType name="VolatilityMatrix">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A matrix of volatilities with dimension 0-3.

            <xsd:documentation xml:lang="en">
              The raw volatility matrix data, expressed as a
              multi-dimensional array.
            </xsd:documentation>
          </xsd:annotation>
        </xsd:element>
        <xsd:element name="adjustment" type="ParametricAdjustment" minOccurs="0" maxOccurs="unbounded">
          <xsd:annotation>
            <xsd:documentation xml:lang="en">
              An adjustment factor, such as for vol smile/skew.
            </xsd:documentation>
          </xsd:annotation>
        </xsd:element>
      </xsd:sequence>
    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

## 1.16 VolatilityRepresentation

### 1.16.1 Description:

A representation of volatilities of an asset. This is a generic structure whose values can be supplied in a specific volatility matrix.

### 1.16.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type PricingStructure)

- An abstract pricing structure base type. Used as a base for structures such as yield curves and volatility matrices..

**asset** (exactly one occurrence; of the type AnyAssetReference) A reference to the asset whose volatility is modeled.

### 1.16.3 Used by:

- Element: volatilityRepresentation

### 1.16.4 Derived Types:

### 1.16.5 Figure:

### 1.16.6 Schema Fragment:

```
<xsd:complexType name="VolatilityRepresentation">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A representation of volatilities of an asset. This is a generic

        <xsd:element name="asset" type="AnyAssetReference">
          <xsd:annotation>
            <xsd:documentation xml:lang="en">
              A reference to the asset whose volatility is modeled.
            </xsd:documentation>
          </xsd:annotation>
        </xsd:element>
      </xsd:sequence>
    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

## 1.17 YieldCurve

### 1.17.1 Description:

A generic yield curve object, which can be valued in a variety of ways.

### 1.17.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type PricingStructure)

- An abstract pricing structure base type. Used as a base for structures such as yield curves and volatility matrices..

**algorithm** (zero or one occurrence; of the type xsd:string)

**forecastRateIndex** (zero or one occurrence; of the type ForecastRateIndex)

### 1.17.3 Used by:

- Element: yieldCurve

### 1.17.4 Derived Types:

### 1.17.5 Figure:

### 1.17.6 Schema Fragment:

```
<xsd:complexType name="YieldCurve">
  <xsd:annotation>

      </xsd:sequence>
    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

## 1.18 YieldCurveValuation

### 1.18.1 Description:

The values of a yield curve, including possibly inputs and outputs (dfs, forwards, zero rates).

### 1.18.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type PricingStructureValuation)

- An abstract pricing structure valuation base type. Used as a base for values of pricing structures such as yield curves and volatility matrices. Derived from the "Valuation" type.

**inputs** (zero or one occurrence; of the type QuotedAssetSet)

**zeroCurve** (zero or one occurrence; of the type ZeroRateCurve) A curve of zero rates.

**forwardCurve** (zero or more occurrences; of the type ForwardRateCurve) A curve of forward rates.

**discountFactorCurve** (zero or one occurrence; of the type TermCurve) A curve of discount factors.

### 1.18.3 Used by:

- Element: yieldCurveValuation

### 1.18.4 Derived Types:

### 1.18.5 Figure:

### 1.18.6 Schema Fragment:

```
<xsd:complexType name="YieldCurveValuation">

## 1.19 ZeroRateCurve

### 1.19.1 Description:

A curve used to model a set of zero-coupon interest rates.

### 1.19.2 Contents:

**compoundingFrequency** (exactly one occurrence; of the type CompoundingFrequency) The frequency at which the rates are compounded (e.g. continuously compounded).

**rateCurve** (exactly one occurrence; of the type TermCurve) The curve of zero-coupon values.

### 1.19.3 Used by:

- Complex type: YieldCurveValuation

### 1.19.4 Derived Types:

### 1.19.5 Figure:

### 1.19.6 Schema Fragment:

```
<xsd:complexType name="ZeroRateCurve">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A curve used to model a set of zero-coupon interest rates.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:sequence>
    <xsd:element name="compoundingFrequency" type="CompoundingFrequency">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          The frequency at which the rates are compounded (e.g.
          continuously compounded).
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
    <xsd:element name="rateCurve" type="TermCurve">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          The curve of zero-coupon values.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
  </xsd:sequence>
</xsd:complexType>
```

## ***2 Global Elements***

## **2.1 creditCurve**

### **2.1.1 Description:**

### **2.1.2 Contents:**

Element creditCurve is defined by the complex type CreditCurve

### **2.1.3 Used by:**

### **2.1.4 Substituted by:**

### **2.1.5 Figure:**

### **2.1.6 Schema Fragment:**

```
<xsd:element name="creditCurve" type="CreditCurve" substitutionGroup="pricingStructure"/>
```

## **2.2 creditCurveValuation**

### **2.2.1 Description:**

### **2.2.2 Contents:**

Element creditCurveValuation is defined by the complex type CreditCurveValuation

### **2.2.3 Used by:**

### **2.2.4 Substituted by:**

### **2.2.5 Figure:**

### **2.2.6 Schema Fragment:**

```
<xsd:element name="creditCurveValuation" type="CreditCurveValuation" substitutionGroup="pricing
```

## **2.3 fxCurve**

### **2.3.1 Description:**

### **2.3.2 Contents:**

Element fxCurve is defined by the complex type FxCurve

### **2.3.3 Used by:**

### **2.3.4 Substituted by:**

### **2.3.5 Figure:**

### **2.3.6 Schema Fragment:**

```
<xsd:element name="fxCurve" type="FxCurve" substitutionGroup="pricingStructure"/>
```

## 2.4 fxCurveValuation

### 2.4.1 Description:

### 2.4.2 Contents:

Element fxCurveValuation is defined by the complex type FxCurveValuation

### 2.4.3 Used by:

### 2.4.4 Substituted by:

### 2.4.5 Figure:

### 2.4.6 Schema Fragment:

```
<xsd:element name="fxCurveValuation" type="FxCurveValuation" substitutionGroup="pricingStructur
```

## **2.5 volatilityMatrixValuation**

### **2.5.1 Description:**

### **2.5.2 Contents:**

Element volatilityMatrixValuation is defined by the complex type VolatilityMatrix

### **2.5.3 Used by:**

### **2.5.4 Substituted by:**

### **2.5.5 Figure:**

### **2.5.6 Schema Fragment:**

```
<xsd:element name="volatilityMatrixValuation" type="VolatilityMatrix" substitutionGroup="prici
```

## **2.6 volatilityRepresentation**

### **2.6.1 Description:**

### **2.6.2 Contents:**

Element volatilityRepresentation is defined by the complex type VolatilityRepresentation

### **2.6.3 Used by:**

### **2.6.4 Substituted by:**

### **2.6.5 Figure:**

### **2.6.6 Schema Fragment:**

```
<xsd:element name="volatilityRepresentation" type="VolatilityRepresentation" substitutionGroup="
```

## **2.7 yieldCurve**

### **2.7.1 Description:**

### **2.7.2 Contents:**

Element yieldCurve is defined by the complex type YieldCurve

### **2.7.3 Used by:**

### **2.7.4 Substituted by:**

### **2.7.5 Figure:**

### **2.7.6 Schema Fragment:**

```
<xsd:element name="yieldCurve" type="YieldCurve" substitutionGroup="pricingStructure"/>
```

## **2.8 yieldCurveValuation**

### **2.8.1 Description:**

### **2.8.2 Contents:**

Element yieldCurveValuation is defined by the complex type YieldCurveValuation

### **2.8.3 Used by:**

### **2.8.4 Substituted by:**

### **2.8.5 Figure:**

### **2.8.6 Schema Fragment:**

```
<xsd:element name="yieldCurveValuation" type="YieldCurveValuation" substitutionGroup="pricingSt
```

### **3 Groups**

## 3.1 BidMidAsk.model

### 3.1.1 Description:

The bid, mid, or ask values relevant for a quote

### 3.1.2 Contents:

**bid** (zero or one occurrence; of the type xsd:decimal) A price "bid" by a buyer for an asset, i.e. the price a buyer is willing to pay.

**mid** (zero or one occurrence; of the type xsd:decimal) A price midway between the bid and the ask price.

**ask** (zero or one occurrence; of the type xsd:decimal) A price "asked" by a seller for an asset, i.e. the price at which a seller is willing to sell.

### 3.1.3 Used by:

- Complex type: TermPoint

### 3.1.4 Figure:

### 3.1.5 Schema Fragment:

```
<xsd:group name="BidMidAsk.model">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      The bid, mid, or ask values relevant for a quote

        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
  </xsd:sequence>
</xsd:group>
```

## 3.2 CreditCurveCharacteristics.model

### 3.2.1 Description:

The set of characteristics that describe the outputs of a credit curve.

### 3.2.2 Contents:

Either

**referenceEntity** (exactly one occurrence; of the type LegalEntity) The entity for which this is defined.

Or

**creditEntityReference** (exactly one occurrence; of the type LegalEntityReference) An XML reference a credit entity defined elsewhere in the document.

**creditEvents** (zero or one occurrence; of the type CreditEvents) The material credit event.

**seniority** (exactly one occurrence; of the type CreditSeniority) The level of seniority of the deliverable obligation.

**secured** (exactly one occurrence; of the type xsd:boolean) Whether the deliverable obligation is secured or unsecured.

**currency** (exactly one occurrence; of the type Currency) The currency of denomination of the deliverable obligation.

**obligations** (zero or one occurrence; of the type Obligations) The underlying obligations of the reference entity on which you are buying or selling protection

**deliverableObligations** (zero or one occurrence; of the type DeliverableObligations) What sort of obligation may be delivered in the event of the credit event. ISDA 2003 Term: Obligation Category/Deliverable Obligation Category

### 3.2.3 Used by:

- Complex type: CreditCurve

### 3.2.4 Figure:

### 3.2.5 Schema Fragment:

```
<xsd:group name="CreditCurveCharacteristics.model">
  <xsd:annotation>

## 3.3 FxCurveCharacteristics.model

### 3.3.1 Description:

The set of characteristics that describe the outputs of a fx curve.

### 3.3.2 Contents:

**quotedCurrencyPair** (exactly one occurrence; of the type QuotedCurrencyPair) Defines the two currencies for an FX trade and the quotation relationship between the two currencies.

### 3.3.3 Used by:

- Complex type: FxCurve

### 3.3.4 Figure:

### 3.3.5 Schema Fragment:

```
<xsd:group name="FxCurveCharacteristics.model">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      The set of characteristics that describe the outputs of a fx
      curve.

          relationship between the two currencies.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
  </xsd:sequence>
</xsd:group>
```

## 3.4 RecoveryRate.model

### 3.4.1 Description:

The model of the recovery rate (single value or curve).

### 3.4.2 Contents:

Either

**recoveryRate** (exactly one occurrence; of the type xsd:decimal) A single recovery rate, to be used for all terms.

Or

**recoveryRateCurve** (exactly one occurrence; of the type TermCurve) A curve of recovery rates, allowing different terms to have different recovery rates.

### 3.4.3 Used by:

- Complex type: CreditCurveValuation

### 3.4.4 Figure:

### 3.4.5 Schema Fragment:

```
<xsd:group name="RecoveryRate.model">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      The model of the recovery rate (single value or curve).
    </xsd:documentation>
  </xsd:annotation>
  <xsd:choice>
    <xsd:element name="recoveryRate" type="xsd:decimal">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          A single recovery rate, to be used for all terms.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
    <xsd:element name="recoveryRateCurve" type="TermCurve">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          A curve of recovery rates, allowing different terms to have
          different recovery rates.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
  </xsd:choice>
</xsd:group>
```

## 3.5 UnderlyingAssetOrReference.model

### 3.5.1 Description:

Include or reference an underlying asset definition.

### 3.5.2 Contents:

Either

**underlyingAsset** (exactly one occurrence; of the type Asset) Define the underlying asset when it is a listed security.

Or

**underlyingAssetReference** (zero or one occurrence; of the type AssetReference) A reference to an underlying asset that defines the meaning of the value, i.e. the product that the value corresponds to. For example, this could be a caplet or simple european swaption.

### 3.5.3 Used by:

- Complex type: PricingStructurePoint

### 3.5.4 Figure:

### 3.5.5 Schema Fragment:

```
<xsd:group name="UnderlyingAssetOrReference.model">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      Include or reference an underlying asset definition.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:choice>
    <xsd:element ref="underlyingAsset">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          An underlying asset that defines the meaning of the value,
          i.e. the product that the value corresponds to. For example,

</xsd:group>
```

## 3.6 YieldCurveCharacteristics.model

### 3.6.1 Description:

The set of characteristics that describe the outputs of a yield curve.

### 3.6.2 Contents:

**algorithm** (zero or one occurrence; of the type xsd:string)

**forecastRateIndex** (zero or one occurrence; of the type ForecastRateIndex)

### 3.6.3 Used by:

- Complex type: YieldCurve

### 3.6.4 Figure:

### 3.6.5 Schema Fragment:

# ***1 Global Complex Types***

## 1.1 AdditionalData

### 1.1.1 Description:

Provides extra information not represented in the model that may be useful in processing the message i.e. diagnosing the reason for failure. In case the extra information is in XML format, a CDATA section must be placed around the source message to prevent its interpretation as XML content.

### 1.1.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type xsd:string)

•

### 1.1.3 Used by:

- Complex type: Reason

### 1.1.4 Derived Types:

### 1.1.5 Figure:

### 1.1.6 Schema Fragment:

```
<xsd:complexType name="AdditionalData">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      Provides extra information not represented in the model that may
      be useful in processing the message i.e. diagnosing the reason
      for failure. In case the extra information is in XML format, a
      CDATA section must be placed around the source message to prevent
      its interpretation as XML content.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:simpleContent>
    <xsd:extension base="xsd:string">
      <xsd:attribute name="additionalDataScheme" type="xsd:anyURI" use="optional"/>
    </xsd:extension>
  </xsd:simpleContent>
</xsd:complexType>
```

## 1.2 ConversationId

### 1.2.1 Description:

The unique identifier (name) for the conversation (session), this message is within. A conversation identifier is usually assigned by the initiator of a conversation. Conversations may only be initiated and terminated. Joining conversations has the effect of initiating new conversations. Conversations cannot be split; this instead has the effect of parallel activities on the same conversation or the initiation of a new conversation. Each message belongs to only one conversation. Conversation scopes are defined in the business process definition.

### 1.2.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type xsd:normalizedString)

•

### 1.2.3 Used by:

- Complex type: MessageHeader

### 1.2.4 Derived Types:

### 1.2.5 Figure:

### 1.2.6 Schema Fragment:

```
<xsd:complexType name="ConversationId">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      The unique identifier (name) for the conversation (session), this
      message is within. A conversation identifier is usually assigned
      by the initiator of a conversation. Conversations may only be
      initiated and terminated. Joining conversations has the effect of
      initiating new conversations. Conversations cannot be split; this
      instead has the effect of parallel activities on the same
      conversation or the initiation of a new conversation. Each
      message belongs to only one conversation. Conversation scopes are
      defined in the business process definition.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:simpleContent>
    <xsd:extension base="xsd:normalizedString">
      <xsd:attribute name="conversationIdScheme" type="xsd:anyURI" use="required"/>
    </xsd:extension>
  </xsd:simpleContent>
</xsd:complexType>
```

## 1.3 Message

### 1.3.1 Description:

A type defining the basic structure of all FpML messages which is refined by its derived types.

### 1.3.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type Document)

- The abstract base type from which all FpML compliant messages and documents must be derived.

### 1.3.3 Used by:

- Complex type: NotificationMessage
- Complex type: RequestMessage
- Complex type: ResponseMessage

### 1.3.4 Derived Types:

- Complex type: NotificationMessage
- Complex type: RequestMessage
- Complex type: ResponseMessage

### 1.3.5 Figure:

### 1.3.6 Schema Fragment:

```
<xsd:complexType name="Message" abstract="true">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A type defining the basic structure of all FpML messages which is
      refined by its derived types.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:complexContent>
    <xsd:extension base="Document" />
  </xsd:complexContent>
</xsd:complexType>
```

## 1.4 MessageAddress

### 1.4.1 Description:

The data type used for identifying a message address. It includes a partyIdScheme for keeping the type backward compatible with the PartyId complex type. In the next major version, partyIdScheme attribute will be replaced by a messageAddressScheme attribute.

### 1.4.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type xsd:normalizedString)

### • 1.4.3 Used by:

### 1.4.4 Derived Types:

### 1.4.5 Figure:

### 1.4.6 Schema Fragment:

```
<xsd:complexType name="MessageAddress">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      The data type used for identifying a message address. It includes
      a partyIdScheme for keeping the type backward compatible with the
      PartyId complex type. In the next major version, partyIdScheme
      attribute will be replaced by a messageAddressScheme attribute.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:simpleContent>
    <xsd:extension base="xsd:normalizedString">
      <xsd:attribute name="partyIdScheme" type="xsd:anyURI" default="http://www.fpml.org/ext/is
    </xsd:extension>
  </xsd:simpleContent>
</xsd:complexType>
```

## 1.5 MessageHeader

### 1.5.1 Description:

A type defining the content model for a generic message header that is refined by its derived classes.

### 1.5.2 Contents:

**conversationId** (zero or one occurrence; of the type ConversationId) The unique identifier (name) for the conversation (session), this message is within. A conversation identifier is usually assigned by the initiator of a conversation. Conversations may only be initiated and terminated. Joining conversations has the effect of initiating new conversations. Conversations cannot be split; this instead has the effect of parallel activities on the same conversation or the initiation of a new conversation. Each message belongs to only one conversation. Conversation scopes are defined in the business process definition.

**messageId** (exactly one occurrence; of the type MessageId) A unique identifier (within its coding scheme) assigned to the message by its creating party.

### 1.5.3 Used by:

- Complex type: NotificationMessageHeader
- Complex type: RequestMessageHeader
- Complex type: ResponseMessageHeader

### 1.5.4 Derived Types:

- Complex type: NotificationMessageHeader
- Complex type: RequestMessageHeader
- Complex type: ResponseMessageHeader

### 1.5.5 Figure:

### 1.5.6 Schema Fragment:

```
<xsd:complexType name="MessageHeader" abstract="true">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A type defining the content model for a generic message header
      that is refined by its derived classes.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:sequence>
    <xsd:element name="conversationId" type="ConversationId" minOccurs="0">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          The unique identifier (name) for the conversation (session),
          this message is within. A conversation identifier is usually
          assigned by the initiator of a conversation. Conversations
          may only be initiated and terminated. Joining conversations
          has the effect of initiating new conversations. Conversations
          cannot be split; this instead has the effect of parallel
          activities on the same conversation or the initiation of a
          new conversation. Each message belongs to only one
          conversation. Conversation scopes are defined in the business
          process definition.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
    <xsd:element name="messageId" type="MessageId">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          A unique identifier (within its coding scheme) assigned to
          the message by its creating party.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
  </xsd:sequence>
</xsd:complexType>
```

## 1.6 MessageId

### 1.6.1 Description:

The data type use for message identifiers.

### 1.6.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type xsd:normalizedString)

•

### 1.6.3 Used by:

- Complex type: MessageHeader
- Complex type: NotificationMessageHeader
- Complex type: ResponseMessageHeader

### 1.6.4 Derived Types:

### 1.6.5 Figure:

### 1.6.6 Schema Fragment:

```
<xsd:complexType name="MessageId">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      The data type use for message identifiers.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:simpleContent>
    <xsd:extension base="xsd:normalizedString">
      <xsd:attribute name="messageIdScheme" type="xsd:anyURI" use="required"/>
    </xsd:extension>
  </xsd:simpleContent>
</xsd:complexType>
```

## 1.7 MessageRejected

### 1.7.1 Description:

A type defining the content for a standard message sent when a recipient cannot interpret or process an earlier message.

### 1.7.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type NotificationMessage)

- A type defining the basic content for a message sent to inform another system that some 'business event' has occurred. Notifications are not expected to be replied to.

**reason** (one or more occurrences; of the type Reason) An instance of the Reason type used to record the nature of any errors associated with a message.

**additionalData** (zero or one occurrence; of the type AdditionalData) Any string of additional data that may help the message processor, for example in a rejection message this might contain a code value or the text of the original request (within a CDATA section).

### 1.7.3 Used by:

### 1.7.4 Derived Types:

### 1.7.5 Figure:

### 1.7.6 Schema Fragment:

```
<xsd:complexType name="MessageRejected">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A type defining the content for a standard message sent when a
      recipient cannot interpret or process an earlier message.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:complexContent>
    <xsd:extension base="NotificationMessage">
      <xsd:sequence>
        <xsd:group ref="Exception.model"/>
      </xsd:sequence>
    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

## 1.8 NotificationMessage

### 1.8.1 Description:

A type defining the basic content for a message sent to inform another system that some 'business event' has occurred. Notifications are not expected to be replied to.

### 1.8.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type Message)

- A type defining the basic structure of all FpML messages which is refined by its derived types.

**header** (exactly one occurrence; of the type NotificationMessageHeader)

**validation** (zero or more occurrences; of the type Validation)

### 1.8.3 Used by:

- Complex type: AllocationAmended
- Complex type: AllocationCancelled
- Complex type: AllocationCreated
- Complex type: AmendmentConfirmed
- Complex type: CancelTradeCashflows
- Complex type: ContractCreated
- Complex type: ContractFullTermination
- Complex type: ContractFullTerminationCancelled
- Complex type: ContractIncreased
- Complex type: ContractIncreasedCancelled
- Complex type: ContractNovated
- Complex type: ContractNovatedCancelled
- Complex type: ContractPartialTermination
- Complex type: ContractPartialTerminationCancelled
- Complex type: ContractReferenceMessage
- Complex type: CreditEventNotification
- Complex type: FacilityNotice
- Complex type: IncreaseConfirmed
- Complex type: LoanContractNotice
- Complex type: MessageRejected
- Complex type: NovationNotificationMessage
- Complex type: PositionReport
- Complex type: TerminationConfirmed
- Complex type: TradeAffirmation
- Complex type: TradeAlleged
- Complex type: TradeAmended
- Complex type: TradeCancelled
- Complex type: TradeCashflowsAsserted
- Complex type: TradeConfirmed
- Complex type: TradeCreated
- Complex type: TradeMatched
- Complex type: TradeMismatched
- Complex type: TradeUnmatched
- Complex type: ValuationReport

### 1.8.4 Derived Types:

- Complex type: AllocationAmended
- Complex type: AllocationCancelled
- Complex type: AllocationCreated
- Complex type: AmendmentConfirmed
- Complex type: CancelTradeCashflows
- Complex type: ContractCreated
- Complex type: ContractFullTermination
- Complex type: ContractFullTerminationCancelled
- Complex type: ContractIncreased
- Complex type: ContractIncreasedCancelled
- Complex type: ContractNovated
- Complex type: ContractNovatedCancelled
- Complex type: ContractPartialTermination
- Complex type: ContractPartialTerminationCancelled
- Complex type: ContractReferenceMessage
- Complex type: CreditEventNotification
- Complex type: FacilityNotice
- Complex type: IncreaseConfirmed
- Complex type: LoanContractNotice
- Complex type: MessageRejected
- Complex type: NovationNotificationMessage
- Complex type: PositionReport
- Complex type: TerminationConfirmed
- Complex type: TradeAffirmation
- Complex type: TradeAlleged
- Complex type: TradeAmended
- Complex type: TradeCancelled
- Complex type: TradeCashflowsAsserted
- Complex type: TradeConfirmed
- Complex type: TradeCreated
- Complex type: TradeMatched
- Complex type: TradeMismatched
- Complex type: TradeUnmatched
- Complex type: ValuationReport

### 1.8.5 Figure:

      </xsd:sequence>
    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>

```

## 1.9 NotificationMessageHeader

### 1.9.1 Description:

A type that refines the generic message header to match the requirements of a NotificationMessage.

### 1.9.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type MessageHeader)

- A type defining the content model for a generic message header that is refined by its derived classes.

**inReplyTo** (zero or one occurrence; of the type MessageId) A copy of the unique message identifier (within its own coding scheme) to which this message is responding.

**sentBy** (exactly one occurrence; of the type MessageAddress) The unique identifier (within its coding scheme) for the originator of a message instance.

**sendTo** (zero or more occurrences; of the type MessageAddress) A unique identifier (within its coding scheme) indicating an intended recipient of a message.

**copyTo** (zero or more occurrences; of the type MessageAddress) A unique identifier (within the specified coding scheme) giving the details of some party to whom a copy of this message will be sent for reference.

**creationTimestamp** (exactly one occurrence; of the type xsd:dateTime) The date and time (on the source system) when this message instance was created.

**expiryTimestamp** (zero or one occurrence; of the type xsd:dateTime) The date and time (on the source system) when this message instance will be considered expired.

**partyMessageInformation** (zero or more occurrences; of the type PartyMessageInformation) Additional message information that may be provided by each involved party.

**dsig:Signature** (zero or more occurrences;

### 1.9.3 Used by:

- Complex type: NotificationMessage

### 1.9.4 Derived Types:

### 1.9.5 Figure:

### 1.9.6 Schema Fragment:

```
<xsd:complexType name="NotificationMessageHeader">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">

        <xsd:group ref="MessageHeader.model"/>
      </xsd:sequence>
    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

## 1.10 PartyMessageInformation

### 1.10.1 Description:

A type defining additional information that may be recorded against a message.

### 1.10.2 Contents:

**partyReference** (exactly one occurrence; of the type PartyReference) Identifies that party that has ownership of this information.

### 1.10.3 Used by:

### 1.10.4 Derived Types:

### 1.10.5 Figure:

### 1.10.6 Schema Fragment:

```
<xsd:complexType name="PartyMessageInformation">

          Identifies that party that has ownership of this information.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
  </xsd:sequence>
</xsd:complexType>
```

## 1.11 ProblemLocation

### 1.11.1 Description:

Provides a lexical location (i.e. a line number and character for bad XML) or an XPath location (i.e. place to identify the bad location for valid XML).

### 1.11.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type xsd:normalizedString)

### 1.11.3 Used by:

- Complex type: Reason

### 1.11.4 Derived Types:

### 1.11.5 Figure:

### 1.11.6 Schema Fragment:

## 1.12 Reason

### 1.12.1 Description:

A type defining a content model for describing the nature and possible location of a error within a previous message.

### 1.12.2 Contents:

**reasonCode** (exactly one occurrence; of the type ReasonCode) A machine interpretable error code.

**location** (zero or one occurrence; of the type ProblemLocation) A value indicating the location of the problem within the subject message.

**description** (zero or one occurrence; of the type xsd:string) Plain English text describing the associated error condition

**validationRuleId** (zero or one occurrence; of the type Validation) A reference identifying a rule within a validation scheme

**additionalData** (zero or more occurrences; of the type AdditionalData) Any string of additional data that may help the message processor, for example in a rejection message this might contain a code value or the text of any one of the messages (within a CDATA section).

### 1.12.3 Used by:

- Complex type: NovationConsentRefused
- Complex type: UnprocessedPosition

### 1.12.4 Derived Types:

### 1.12.5 Figure:

### 1.12.6 Schema Fragment:

```
<xsd:complexType name="Reason">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">

## 1.15 RequestMessageHeader

### 1.15.1 Description:

A type refining the generic message header content to make it specific to request messages.

### 1.15.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type MessageHeader)

- A type defining the content model for a generic message header that is refined by its derived classes.

**sentBy** (exactly one occurrence; of the type MessageAddress) The unique identifier (within its coding scheme) for the originator of a message instance.

**sendTo** (zero or more occurrences; of the type MessageAddress) A unique identifier (within its coding scheme) indicating an intended recipient of a message.

**copyTo** (zero or more occurrences; of the type MessageAddress) A unique identifier (within the specified coding scheme) giving the details of some party to whom a copy of this message will be sent for reference.

**creationTimestamp** (exactly one occurrence; of the type xsd:dateTime) The date and time (on the source system) when this message instance was created.

**expiryTimestamp** (zero or one occurrence; of the type xsd:dateTime) The date and time (on the source system) when this message instance will be considered expired.

**partyMessageInformation** (zero or more occurrences; of the type PartyMessageInformation) Additional message information that may be provided by each involved party.

**dsig:Signature** (zero or more occurrences;

### 1.15.3 Used by:

    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

## 1.16 RequestTradeStatus

### 1.16.1 Description:

A type defining the content model for a message allowing one party to query the status of one or many trades previously sent to another party.

### 1.16.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type RequestMessage)

- A type defining the basic content of a message that requests the receiver to perform some business operation determined by the message type and its content.

**tradeIdentifier** (one or more occurrences; of the type TradeIdentifier) An instance of a unique trade identifier.

**party** (one or more occurrences; of the type Party) A legal entity or a subdivision of a legal entity.

### 1.16.3 Used by:

### 1.16.4 Derived Types:

  <xsd:complexContent>
    <xsd:extension base="TradeErrorResponse" />
  </xsd:complexContent>
</xsd:complexType>
```

## 1.22 TradeErrorResponse

### 1.22.1 Description:

An abstract trade error response message containing a single trade or trade reference.

### 1.22.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type ResponseMessage)

- A type refining the generic message content model to make it specific to response messages.

Either

**trade** (exactly one occurrence; of the type Trade) An element that allows the full details of the trade to be used as a mechanism for identifying the trade for which the post-trade event pertains

Or

**tradeReference** (exactly one occurrence; of the type PartyTradeIdentifiers) A container since an individual trade can be referenced by two or more different partyTradeIdentifier elements - each allocated by a different party.

**party** (one or more occurrences; of the type Party) A legal entity or a subdivision of a legal entity.

### 1.22.3 Used by:

- Complex type: TradeAlreadyAffirmed
- Complex type: TradeAlreadyCancelled
- Complex type: TradeAlreadyConfirmed
- Complex type: TradeAlreadyTerminated

### 1.22.4 Derived Types:

- Complex type: TradeAlreadyAffirmed
- Complex type: TradeAlreadyCancelled
- Complex type: TradeAlreadyConfirmed
- Complex type: TradeAlreadyTerminated

### 1.22.5 Figure:

## 1.24 TradeStatus

### 1.24.1 Description:

A type defining the content model for a message normally generated in response to a RequestTradeStatus request.

### 1.24.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type ResponseMessage)

- A type refining the generic message content model to make it specific to response messages.

**tradeStatusItem** (one or more occurrences; of the type TradeStatusItem) A collection of data values describing the state of the given trade.

**party** (one or more occurrences; of the type Party) A legal entity or a subdivision of a legal entity.

### 1.24.3 Used by:

### 1.24.4 Derived Types:

### 1.24.5 Figure:

### 1.24.6 Schema Fragment:

## 1.25 TradeStatusItem

### 1.25.1 Description:

A type used in trade status enquiry messages which relates a trade identifier to its current status value.

### 1.25.2 Contents:

**tradeIdentifier** (exactly one occurrence; of the type TradeIdentifier) An instance of a unique trade identifier.

**tradeStatusValue** (exactly one occurrence; of the type TradeStatusValue) The trade status value.

### 1.25.3 Used by:

- Complex type: TradeStatus

### 1.25.4 Derived Types:

### 1.25.5 Figure:

### 1.25.6 Schema Fragment:

## ***2 Groups***

## 2.1 Exception.model

### 2.1.1 Description:

A model group which has exception elements.

### 2.1.2 Contents:

**reason** (one or more occurrences; of the type Reason) An instance of the Reason type used to record the nature of any errors associated with a message.

**additionalData** (zero or one occurrence; of the type AdditionalData) Any string of additional data that may help the message processor, for example in a rejection message this might contain a code value or the text of the original request (within a CDATA section).

### 2.1.3 Used by:

- Complex type: MessageRejected

### 2.1.4 Figure:

### 2.1.5 Schema Fragment:

```
<xsd:group name="Exception.model">

  </xsd:sequence>
</xsd:group>
```

## 2.2 MessageHeader.model

### 2.2.1 Description:

Defines the structure that contains routing and identification information, which allows processing and transfer of the message. It contains only messaging information that is applicable to all messages. If the information is not message related or is not applicable to all messages then it is not defined in the message header.

### 2.2.2 Contents:

**sentBy** (exactly one occurrence; of the type MessageAddress) The unique identifier (within its coding scheme) for the originator of a message instance.

**sendTo** (zero or more occurrences; of the type MessageAddress) A unique identifier (within its coding scheme) indicating an intended recipient of a message.

**copyTo** (zero or more occurrences; of the type MessageAddress) A unique identifier (within the specified coding scheme) giving the details of some party to whom a copy of this message will be sent for reference.

**creationTimestamp** (exactly one occurrence; of the type xsd:dateTime) The date and time (on the source system) when this message instance was created.

**expiryTimestamp** (zero or one occurrence; of the type xsd:dateTime) The date and time (on the source system) when this message instance will be considered expired.

**partyMessageInformation** (zero or more occurrences; of the type PartyMessageInformation) Additional message information that may be provided by each involved party.

**dsig:Signature** (zero or more occurrences;

### 2.2.3 Used by:

- Complex type: NotificationMessageHeader

# ***1 Global Complex Types***

## 1.1 Asian

### 1.1.1 Description:

As per ISDA 2002 Definitions

### 1.1.2 Contents:

**averagingInOut** (exactly one occurrence; of the type AveragingInOutEnum)

**strikeFactor** (zero or one occurrence; of the type xsd:decimal) The factor of strike.

**averagingPeriodIn** (zero or one occurrence; of the type AveragingPeriod) The averaging in period.

**averagingPeriodOut** (zero or one occurrence; of the type AveragingPeriod) The averaging out period.

### 1.1.3 Used by:

- Complex type: OptionFeatures

### 1.1.4 Derived Types:

### 1.1.5 Figure:

### 1.1.6 Schema Fragment:

```
<xsd:complexType name="Asian">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      As per ISDA 2002 Definitions
    </xsd:documentation>
  </xsd:annotation>
  <xsd:sequence>
    <xsd:element name="averagingInOut" type="AveragingInOutEnum"/>
    <xsd:element name="strikeFactor" type="xsd:decimal" minOccurs="0">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          The factor of strike.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
    <xsd:element name="averagingPeriodIn" type="AveragingPeriod" minOccurs="0">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          The averaging in period.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
    <xsd:element name="averagingPeriodOut" type="AveragingPeriod" minOccurs="0">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          The averaging out period.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
  </xsd:sequence>
</xsd:complexType>
```

## 1.2 AveragingPeriod

### 1.2.1 Description:

Period over which an average value is taken

### 1.2.2 Contents:

**schedule** (zero or more occurrences; of the type AveragingSchedule) A Equity Derivative schedule.

**averagingDateTimes** (zero or one occurrence; of the type DateTimeList) Averaging DateTimes

**marketDisruption** (exactly one occurrence; of the type MarketDisruption) The market disruption event as defined by ISDA 2002 Definitions

### 1.2.3 Used by:

- Complex type: Asian

### 1.2.4 Derived Types:

### 1.2.5 Figure:

### 1.2.6 Schema Fragment:

```
<xsd:complexType name="AveragingPeriod">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      Period over which an average value is taken
    </xsd:documentation>
  </xsd:annotation>
  <xsd:sequence>
    <xsd:element name="schedule" type="AveragingSchedule" minOccurs="0" maxOccurs="unbounded">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          A Equity Derivative schedule.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
    <xsd:element name="averagingDateTimes" type="DateTimeList" minOccurs="0">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          Averaging DateTimes
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
    <xsd:element name="marketDisruption" type="MarketDisruption">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          The market disruption event as defined by ISDA 2002
          Definitions
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
  </xsd:sequence>
</xsd:complexType>
```

## 1.3 AveragingSchedule

### 1.3.1 Description:

Method of generating a series of dates.

### 1.3.2 Contents:

**startDate** (exactly one occurrence; of the type xsd:date) The averaging period start date.

**endDate** (exactly one occurrence; of the type xsd:date) The averaging period end date.

**frequency** (exactly one occurrence; of the type xsd:positiveInteger) The schedule frequency.

**frequencyType** (exactly one occurrence; of the type FrequencyType) The schedule frequency type.

**weekNumber** (zero or one occurrence; of the type xsd:positiveInteger) The schedule week number.

**dayOfWeek** (zero or one occurrence; of the type WeeklyRollConventionEnum) Day of the Week.

### 1.3.3 Used by:

- Complex type: AveragingPeriod
- Complex type: TriggerEvent

### 1.3.4 Derived Types:

### 1.3.5 Figure:

### 1.3.6 Schema Fragment:

```
<xsd:complexType name="AveragingSchedule">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      Method of generating a series of dates.

```
        Day of the Week.  
    </xsd:documentation>  
  </xsd:annotation>  
</xsd:element>  
</xsd:sequence>  
</xsd:complexType>
```

## 1.4 Barrier

### 1.4.1 Description:

As per ISDA 2002 Definitions.

### 1.4.2 Contents:

**barrierCap** (zero or one occurrence; of the type TriggerEvent) A trigger level approached from beneath.

**barrierFloor** (zero or one occurrence; of the type TriggerEvent) A trigger level approached from above.

### 1.4.3 Used by:

- Complex type: OptionFeatures

### 1.4.4 Derived Types:

### 1.4.5 Figure:

### 1.4.6 Schema Fragment:

```
<xsd:complexType name="Barrier">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      As per ISDA 2002 Definitions.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:sequence>
    <xsd:element name="barrierCap" type="TriggerEvent" minOccurs="0">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          A trigger level approached from beneath.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
    <xsd:element name="barrierFloor" type="TriggerEvent" minOccurs="0">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          A trigger level approached from above.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
  </xsd:sequence>
</xsd:complexType>
```

## 1.5 CalendarSpread

### 1.5.1 Description:

A type for defining a calendar spread feature

### 1.5.2 Contents:

**expirationDateTwo** (exactly one occurrence; of the type AdjustableOrRelativeDate)

### 1.5.3 Used by:

- Complex type: StrategyFeature

### 1.5.4 Derived Types:

### 1.5.5 Figure:

### 1.5.6 Schema Fragment:

```
<xsd:complexType name="CalendarSpread">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A type for defining a calendar spread feature
    </xsd:documentation>
  </xsd:annotation>
  <xsd:sequence>
    <xsd:element name="expirationDateTwo" type="AdjustableOrRelativeDate"/>
  </xsd:sequence>
</xsd:complexType>
```

## 1.6 ClassifiedPayment

### 1.6.1 Description:

A Classified Simple Payment.

### 1.6.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type SimplePayment)

- A complex type to specified payments in a simpler fashion than the Payment type. This construct should be used from the version 4.3 onwards.

**paymentType** (zero or more occurrences; of the type PaymentType) Classification of this Payment.

### 1.6.3 Used by:

- Complex type: NettedSwapBase

### 1.6.4 Derived Types:

### 1.6.5 Figure:

### 1.6.6 Schema Fragment:

```
<xsd:complexType name="ClassifiedPayment">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A Classified Simple Payment.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:complexContent>
    <xsd:extension base="SimplePayment">
      <xsd:sequence>
        <xsd:element name="paymentType" type="PaymentType" minOccurs="0" maxOccurs="unbounded">
          <xsd:annotation>
            <xsd:documentation xml:lang="en">
              Classification of this Payment.
            </xsd:documentation>
          </xsd:annotation>
        </xsd:element>
      </xsd:sequence>
    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

## 1.7 Composite

### 1.7.1 Description:

Specifies the conditions to be applied for converting into a reference currency when the actual currency rate is not determined upfront.

### 1.7.2 Contents:

**determinationMethod** (zero or one occurrence; of the type DeterminationMethod) Specifies the method according to which an amount or a date is determined.

**relativeDate** (zero or one occurrence; of the type RelativeDateOffset) A date specified as some offset to another date (the anchor date).

**fxSpotRateSource** (zero or one occurrence; of the type FxSpotRateSource) Specifies the methodology (reference source and, optionally, fixing time) to be used for determining a currency conversion rate.

### 1.7.3 Used by:

- Complex type: FxFeature

### 1.7.4 Derived Types:

### 1.7.5 Figure:

### 1.7.6 Schema Fragment:

```
<xsd:complexType name="Composite">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      Specifies the conditions to be applied for converting into a
      reference currency when the actual currency rate is not
      determined upfront.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:sequence>
    <xsd:element name="determinationMethod" type="DeterminationMethod" minOccurs="0">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          Specifies the method according to which an amount or a date
          is determined.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
    <xsd:element name="relativeDate" type="RelativeDateOffset" minOccurs="0">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          A date specified as some offset to another date (the anchor
          date).
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
    <xsd:element name="fxSpotRateSource" type="FxSpotRateSource" minOccurs="0">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          Specifies the methodology (reference source and, optionally,

          rate.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
  </xsd:sequence>
</xsd:complexType>
```

## 1.8 CreditEventNotice

### 1.8.1 Description:

### 1.8.2 Contents:

**notifyingParty** (exactly one occurrence; of the type NotifyingParty) Pointer style references to a party identifier defined elsewhere in the document. The notifying party is the party that notifies the other party when a credit event has occurred by means of a credit event notice. If more than one party is referenced as being the notifying party then either party may notify the other of a credit event occurring. ISDA 2003 Term: Notifying Party

**businessCenter** (zero or one occurrence; of the type BusinessCenter) Inclusion of this business center element implies that Greenwich Mean Time in Section 3.3 of the 2003 ISDA Credit Derivatives Definitions is replaced by the local time of the city indicated by the businessCenter element value.

**publiclyAvailableInformation** (zero or one occurrence; of the type PubliclyAvailableInformation) A specified condition to settlement. Publicly available information means information that reasonably confirms any of the facts relevant to determining that a credit event or potential repudiation/moratorium, as applicable, has occurred. The ISDA defined list (2003) is the market standard and is considered comprehensive, and a minimum of two differing public sources must have published the relevant information, to declare a Credit Event. ISDA 2003 Term: Notice of Publicly Available Information Applicable

## 1.9 CreditEvents

### 1.9.1 Description:

### 1.9.2 Contents:

**bankruptcy** (zero or one occurrence; of the type Empty) A credit event. The reference entity has been dissolved or has become insolvent. It also covers events that may be a precursor to insolvency such as instigation of bankruptcy or insolvency proceedings. Sovereign trades are not subject to Bankruptcy as "technically" a Sovereign cannot become bankrupt. ISDA 2003 Term: Bankruptcy

**failureToPay** (zero or one occurrence; of the type FailureToPay) A credit event. This credit event triggers, after the expiration of any applicable grace period, if the reference entity fails to make due payments in an aggregate amount of not less than the payment requirement on one or more obligations (e.g. a missed coupon payment). ISDA 2003 Term: Failure to Pay

**failureToPayPrincipal** (zero or one occurrence; of the type Empty) A credit event. Corresponds to the failure by the Reference Entity to pay an expected principal amount or the payment of an actual principal amount that is less than the expected principal amount. ISDA 2003 Term: Failure to Pay Principal.

**failureToPayInterest** (zero or one occurrence; of the type Empty) A credit event. Corresponds to the failure by the Reference Entity to pay an expected interest amount or the payment of an actual interest amount that is less than the expected interest amount. ISDA 2003 Term: Failure to Pay Interest.

**obligationDefault** (zero or one occurrence; of the type Empty) A credit event. One or more of the obligations have become capable of being declared due and payable before they would otherwise have been due and payable as a result of, or on the basis of, the occurrence of a default, event of default or other similar condition or event other than failure to pay. ISDA 2003 Term: Obligation Default

**obligationAcceleration** (zero or one occurrence; of the type Empty) A credit event. One or more of the obligations have been declared due and payable before they would otherwise have been due and payable as a result of, or on the basis of, the occurrence of a default, event of default or other similar condition or event other than failure to pay (preferred by the market over Obligation Default, because more definitive and encompasses the definition of Obligation Default - this is more favorable to the Seller). Subject to the default requirement amount. ISDA 2003 Term: Obligation Acceleration

**repudiationMoratorium** (zero or one occurrence; of the type Empty) A credit event. The reference entity, or a governmental authority, either refuses to recognise or challenges the validity of one or more obligations of the reference entity, or imposes a moratorium thereby postponing payments on one or more of the obligations of the reference entity. Subject to the default requirement amount. ISDA 2003 Term: Repudiation/Moratorium

**restructuring** (zero or one occurrence; of the type Restructuring) A credit event. A restructuring is an event that materially impacts the reference entity's obligations, such as an interest rate reduction, principal reduction, deferral of interest or principal, change in priority ranking, or change in currency or composition of payment. ISDA 2003 Term: Restructuring

**distressedRatingsDowngrade** (zero or one occurrence; of the type Empty) A credit event. Results from the fact that the rating of the reference obligation is downgraded to a distressed rating level. From a usage standpoint, this credit event is typically not applicable in case of RMBS trades.

**maturityExtension** (zero or one occurrence; of the type Empty) A credit event. Results from the fact that the underlier fails to make principal payments as expected.

**writedown** (zero or one occurrence; of the type Empty) A credit event. Results from the fact that the underlier writes down its outstanding principal amount.

**defaultRequirement** (zero or one occurrence; of the type Money) In relation to certain credit events, serves as a threshold for Obligation Acceleration, Obligation Default, Repudiation/Moratorium and Restructuring. Market standard is USD 10,000,000 (JPY 1,000,000,000 for all Japanese Yen trades). This is applied on an aggregate or total basis across all Obligations of the Reference Entity. Used to prevent technical/operational errors from triggering credit events. ISDA 2003 Term: Default Requirement

**creditEventNotice** (zero or one occurrence; of the type CreditEventNotice) A specified condition to settlement. An irrevocable written or verbal notice that describes a credit event that has occurred. The notice is sent from the notifying party (either the buyer or the seller) to the counterparty. It provides information relevant to determining that a credit event has occurred. This is typically accompanied by Publicly Available Information. ISDA 2003 Term: Credit Event Notice

## 1.12 FeaturePayment

### 1.12.1 Description:

Payment made following trigger occurrence.

### 1.12.2 Contents:

**payerPartyReference** (exactly one occurrence; of the type PartyOrAccountReference) A reference to the party responsible for making the payments defined by this structure.

**receiverPartyReference** (exactly one occurrence; of the type PartyOrAccountReference) A reference to the party that receives the payments corresponding to this structure.

Either

**levelPercentage** (exactly one occurrence; of the type xsd:decimal) The trigger level percentage.

Or

**amount** (exactly one occurrence; of the type NonNegativeDecimal) The monetary quantity in currency units.

**time** (zero or one occurrence; of the type TimeTypeEnum) The feature payment time.

**currency** (zero or one occurrence; of the type Currency) The currency in which an amount is denominated.

**featurePaymentDate** (zero or one occurrence; of the type AdjustableOrRelativeDate) The feature payment date.

### 1.12.3 Used by:

## 1.14 FxFeature

### 1.14.1 Description:

A type for defining Fx Features.

### 1.14.2 Contents:

**referenceCurrency** (exactly one occurrence; of the type IdentifiedCurrency) Specifies the reference currency of the trade.

Either

**composite** (exactly one occurrence; of the type Composite) If "Composite" is specified as the Settlement Type in the relevant Transaction Supplement, an amount in the Settlement Currency, determined by the Calculation Agent as being equal to the number of Options exercised or deemed exercised, multiplied by:  $(\text{Settlement Price} - \text{Strike Price}) / (\text{Strike Price} - \text{Settlement Price}) \times \text{Multiplier}$  provided that if the above is equal to a negative amount the Option Cash Settlement Amount shall be deemed to be zero.

Or

**quanto** (exactly one occurrence; of the type Quanto) If "Quanto" is specified as the Settlement Type in the relevant Transaction Supplement, an amount, as determined by the Calculation Agent in accordance with the Section 8.2 of the Equity Definitions

Or

**crossCurrency** (exactly one occurrence; of the type Composite) If "Cross-Currency" is specified as the Settlement Type in the relevant Transaction Supplement, an amount in the Settlement Currency, determined by the Calculation Agent as being equal to the number of Options exercised or deemed exercised, multiplied by:  $(\text{Settlement Price} - \text{Strike Price}) / (\text{Strike Price} - \text{Settlement Price}) \times \text{Multiplier} \times \text{one unit of the Reference Currency}$  converted into an amount in the Settlement Currency using the rate of exchange of the Settlement Currency as quoted on the Reference Price Source on the Valuation Date, provided that if the above is equal to a negative amount the Option Cash Settlement Amount shall be deemed to be zero

            Settlement Currency, determined by the Calculation Agent as
            being equal to the number of Options exercised or deemed
            exercised, multiplied by: (Settlement Price - Strike Price)
            / (Strike Price - Settlement Price) x Multiplier x one unit
            of the Reference Currency converted into an amount in the
            Settlement Currency using the rate of exchange of the
            Settlement Currency as quoted on the Reference Price Source
            on the Valuation Date, provided that if the above is equal
            to a negative amount the Option Cash Settlement Amount
            shall be deemed to be zero
        </xsd:documentation>
    </xsd:annotation>
</xsd:element>
</xsd:choice>
</xsd:sequence>
</xsd:complexType>
```

## 1.15 GracePeriodExtension

### 1.15.1 Description:

### 1.15.2 Contents:

**gracePeriod** (zero or one occurrence; of the type Offset) The number of calendar or business days after any due date that the reference entity has to fulfil its obligations before a failure to pay credit event is deemed to have occurred. ISDA 2003 Term: Grace Period

### 1.15.3 Used by:

- Complex type: FailureToPay

### 1.15.4 Derived Types:

### 1.15.5 Figure:

### 1.15.6 Schema Fragment:

```
<xsd:complexType name="GracePeriodExtension">
  <xsd:sequence>
    <xsd:element name="gracePeriod" type="Offset" minOccurs="0">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          The number of calendar or business days after any due date
          that the reference entity has to fulfil its obligations
          before a failure to pay credit event is deemed to have
          occurred. ISDA 2003 Term: Grace Period
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
  </xsd:sequence>
</xsd:complexType>
```

## 1.16 Knock

### 1.16.1 Description:

Knock In means option to exercise comes into existence. Knock Out means option to exercise goes out of existence

### 1.16.2 Contents:

**knockIn** (zero or one occurrence; of the type TriggerEvent) The knock in.

**knockOut** (zero or one occurrence; of the type TriggerEvent) The knock out.

### 1.16.3 Used by:

- Complex type: OptionFeatures

### 1.16.4 Derived Types:

### 1.16.5 Figure:

### 1.16.6 Schema Fragment:

```
<xsd:complexType name="Knock">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      Knock In means option to exercise comes into existence. Knock Out

  </xsd:sequence>
</xsd:complexType>
```

## 1.19 OptionBase

### 1.19.1 Description:

A type for defining the common features of options

### 1.19.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type Product)

- The base type which all FpML products extend.

**buyerPartyReference** (exactly one occurrence; of the type PartyOrTradeSideReference) A reference to the party that buys this instrument, ie. pays for this instrument and receives the rights defined by it. See 2000 ISDA definitions Article 11.1 (b). In the case of FRAs this the fixed rate payer.

**sellerPartyReference** (exactly one occurrence; of the type PartyOrTradeSideReference) A reference to the party that sells ("writes") this instrument, i.e. that grants the rights defined by this instrument and in return receives a payment for it. See 2000 ISDA definitions Article 11.1 (a). In the case of FRAs this is the floating rate payer.

**optionType** (exactly one occurrence; of the type OptionTypeEnum) The type of option transaction. From a usage standpoint, put/call is the default option type, while payer/receiver indicator is used for options index credit default swaps, consistently with the industry practice. Straddle is used for the case of straddle strategy, that combine a call and a put with the same strike.

### 1.19.3 Used by:

- Complex type: OptionBaseExtended

### 1.19.4 Derived Types:

- Complex type: OptionBaseExtended

### 1.19.5 Figure:

### 1.19.6 Schema Fragment:

```
<xsd:complexType name="OptionBase" abstract="true">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A type for defining the common features of options
    </xsd:documentation>
  </xsd:annotation>
  <xsd:complexContent>
    <xsd:extension base="Product">
      <xsd:sequence>
        <xsd:group ref="BuyerSeller.model"/>
        <xsd:element name="optionType" type="OptionTypeEnum">
          <xsd:annotation>
            <xsd:documentation xml:lang="en">
              The type of option transaction. From a usage standpoint,
              put/call is the default option type, while payer/receiver
              indicator is used for options index credit default swaps,
              consistently with the industry practice. Straddle is used
              for the case of straddle strategy, that combine a call
              and a put with the same strike.
            </xsd:documentation>

        </xsd:element>
      </xsd:sequence>
    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

## 1.20 OptionBaseExtended

### 1.20.1 Description:

Base type for options starting with the 4-3 release, until we refactor the schema as part of the 5-0 release series

### 1.20.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type OptionBase)

- A type for defining the common features of options

**premium** (zero or one occurrence; of the type Premium) The option premium payable by the buyer to the seller

**exercise** (exactly one occurrence; of the type Exercise) An placeholder for the actual option exercise definitions.

**exerciseProcedure** (exactly one occurrence; of the type ExerciseProcedure) A set of parameters defining procedures associated with the exercise.

**feature** (zero or one occurrence; of the type OptionFeature) An Option feature such as quanto, asian, barrier, knock

Either

**notionalReference** (exactly one occurrence; of the type NotionalAmountReference)

Or

**notionalAmount** (exactly one occurrence; of the type Money)

**optionEntitlement** (exactly one occurrence; of the type PositiveDecimal) The number of units of underlying per option comprised in the option transaction.

**entitlementCurrency** (zero or one occurrence; of the type Currency) TODO

**numberOfOptions** (zero or one occurrence; of the type PositiveDecimal) The number of options comprised in the option transaction.

**settlementType** (exactly one occurrence; of the type SettlementTypeEnum)

**settlementDate** (zero or one occurrence; of the type AdjustableOrRelativeDate)

### 1.20.3 Used by:

- Complex type: BondOption
- Complex type: CorrelationSwapOption
- Complex type: CreditDefaultSwapOption
- Complex type: DividendSwapTransactionSupplementOption
- Complex type: VarianceSwapOption

### 1.20.4 Derived Types:

- Complex type: BondOption
- Complex type: CorrelationSwapOption
- Complex type: CreditDefaultSwapOption
- Complex type: DividendSwapTransactionSupplementOption
- Complex type: VarianceSwapOption

### 1.20.5 Figure:

### 1.20.6 Schema Fragment:

</xsd:complexContent>
</xsd:complexType>

```

## 1.21 OptionFeature

### 1.21.1 Description:

A type for defining option features.

### 1.21.2 Contents:

**fxFeature** (zero or one occurrence; of the type FxFeature) A quanto or composite FX feature.

**strategyFeature** (zero or one occurrence; of the type StrategyFeature) A simple strategy feature

**asian** (zero or one occurrence; of the type Asian) An option where and average price is taken on valuation.

**barrier** (zero or one occurrence; of the type Barrier) An option with a barrier feature.

**knock** (zero or one occurrence; of the type Knock) A knock feature.

**passThrough** (zero or one occurrence; of the type PassThrough) Pass through payments from the underlying, such as dividends.

### 1.21.3 Used by:

- Complex type: OptionBaseExtended

### 1.21.4 Derived Types:

### 1.21.5 Figure:

### 1.21.6 Schema Fragment:

  <xsd:sequence>
    <xsd:group ref="OptionBaseFeature.model"/>
    <xsd:group ref="OptionFeature.model"/>
  </xsd:sequence>
</xsd:complexType>
```

## 1.22 OptionNumericStrike

### 1.22.1 Description:

A type for defining the strike price for an option as a numeric value without currency.

### 1.22.2 Contents:

Either

**strikePrice** (exactly one occurrence; of the type xsd:decimal) The price or level at which the option has been struck.

Or

**strikePercentage** (exactly one occurrence; of the type xsd:decimal) The price or level expressed as a percentage of the forward starting spot price.

### 1.22.3 Used by:

- Complex type: OptionStrike
- Complex type: CorrelationSwapOption
- Complex type: VarianceSwapOption

### 1.22.4 Derived Types:

- Complex type: OptionStrike

### 1.22.5 Figure:

### 1.22.6 Schema Fragment:

```
<xsd:complexType name="OptionNumericStrike">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A type for defining the strike price for an option as a numeric
      value without currency.

        </xsd:annotation>
      </xsd:element>
    </xsd:choice>
  </xsd:sequence>
</xsd:complexType>
```

## 1.23 OptionStrike

### 1.23.1 Description:

A type for defining the strike price for an equity option. The strike price is either: (i) in respect of an index option transaction, the level of the relevant index specified or otherwise determined in the transaction; or (ii) in respect of a share option transaction, the price per share specified or otherwise determined in the transaction. This can be expressed either as a percentage of notional amount or as an absolute value.

### 1.23.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type OptionNumericStrike)

- A type for defining the strike price for an option as a numeric value without currency.

**currency** (zero or one occurrence; of the type Currency) The currency in which an amount is denominated.

### 1.23.3 Used by:

- Complex type: BondOptionStrike
- Complex type: DividendSwapTransactionSupplementOption
- Complex type: StrikeSpread

### 1.23.4 Derived Types:

### 1.23.5 Figure:

### 1.23.6 Schema Fragment:

        </xsd:element>
      </xsd:sequence>
    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

## 1.24 PassThrough

### 1.24.1 Description:

Type which contains pass through payments.

### 1.24.2 Contents:

**passThroughItem** (one or more occurrences; of the type PassThroughItem) One to many pass through payment items.

### 1.24.3 Used by:

- Complex type: OptionFeatures

### 1.24.4 Derived Types:

### 1.24.5 Figure:

### 1.24.6 Schema Fragment:

```
<xsd:complexType name="PassThrough">
  <xsd:annotation>

          One to many pass through payment items.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
  </xsd:sequence>
</xsd:complexType>
```

## 1.25 PassThroughItem

### 1.25.1 Description:

Type to represent a single pass through payment.

### 1.25.2 Contents:

**payerPartyReference** (exactly one occurrence; of the type PartyOrAccountReference) A reference to the party responsible for making the payments defined by this structure.

**receiverPartyReference** (exactly one occurrence; of the type PartyOrAccountReference) A reference to the party that receives the payments corresponding to this structure.

**underlyerReference** (exactly one occurrence; of the type AssetReference) Reference to the underlyer whose payments are being passed through.

**passThroughPercentage** (exactly one occurrence; of the type xsd:decimal) Percentage of payments from the underlyer which are passed through.

### 1.25.3 Used by:

- Complex type: PassThrough

### 1.25.4 Derived Types:

### 1.25.5 Figure:

### 1.25.6 Schema Fragment:

```
<xsd:complexType name="PassThroughItem">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      Type to represent a single pass through payment.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:sequence>
    <xsd:group ref="PayerReceiver.model"/>
    <xsd:element name="underlyerReference" type="AssetReference">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          Reference to the underlyer whose payments are being passed
          through.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
    <xsd:element name="passThroughPercentage" type="xsd:decimal">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          Percentage of payments from the underlyer which are passed
          through.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
  </xsd:sequence>
</xsd:complexType>
```

## 1.26 Premium

### 1.26.1 Description:

A type for defining a premium.

### 1.26.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type SimplePayment)

- A complex type to specified payments in a simpler fashion than the Payment type. This construct should be used from the version 4.3 onwards.

**premiumType** (zero or one occurrence; of the type PremiumTypeEnum) Forward start Premium type

**pricePerOption** (zero or one occurrence; of the type Money) The amount of premium to be paid expressed as a function of the number of options.

**percentageOfNotional** (zero or one occurrence; of the type xsd:decimal) The amount of premium to be paid expressed as a percentage of the notional value of the transaction. A percentage of 5% would be expressed as 0.05.

**discountFactor** (zero or one occurrence; of the type xsd:decimal) The value representing the discount factor used to calculate the present value of the cash flow.

**presentValueAmount** (zero or one occurrence; of the type Money) The amount representing the present value of the forecast payment.

### 1.26.3 Used by:

- Complex type: OptionBaseExtended

### 1.26.4 Derived Types:

### 1.26.5 Figure:

### 1.26.6 Schema Fragment:

```
<xsd:complexType name="Premium">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A type for defining a premium.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:complexContent>
    <xsd:extension base="SimplePayment">
      <xsd:sequence>
        <xsd:group ref="Premium.model" minOccurs="0"/>
        <xsd:group ref="PaymentDiscounting.model" minOccurs="0"/>
      </xsd:sequence>
    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

## 1.27 PubliclyAvailableInformation

### 1.27.1 Description:

### 1.27.2 Contents:

**standardPublicSources** (zero or one occurrence; of the type Empty) If this element is specified, indicates that ISDA defined Standard Public Sources are applicable.

**publicSource** (zero or more occurrences; of the type xsd:string) A public information source, e.g. a particular newspaper or electronic news service, that may publish relevant information used in the determination of whether or not a credit event has occurred. ISDA 2003 Term: Public Source

**specifiedNumber** (zero or one occurrence; of the type xsd:positiveInteger) The minimum number of the specified public information sources that must publish information that reasonably confirms that a credit event has occurred. The market convention is two. ISDA 2003 Term: Specified Number

### 1.27.3 Used by:

- Complex type: CreditEventNotice

### 1.27.4 Derived Types:

### 1.27.5 Figure:

### 1.27.6 Schema Fragment:

          confirms that a credit event has occurred. The market
          convention is two. ISDA 2003 Term: Specified Number
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
  </xsd:sequence>
</xsd:complexType>
```

## 1.28 Quanto

### 1.28.1 Description:

Determines the currency rate that the seller of the equity amounts will apply at each valuation date for converting the respective amounts into a currency that is different from the currency denomination of the underlying.

### 1.28.2 Contents:

**fxRate** (zero or more occurrences; of the type FxRate) Specifies a currency conversion rate.

**fxSpotRateSource** (zero or one occurrence; of the type FxSpotRateSource) Specifies the methodology (reference source and, optionally, fixing time) to be used for determining a currency conversion rate.

### 1.28.3 Used by:

- Complex type: FxFeature

### 1.28.4 Derived Types:

### 1.28.5 Figure:

### 1.28.6 Schema Fragment:

## 1.29 Restructuring

### 1.29.1 Description:

### 1.29.2 Contents:

**restructuringType** (zero or one occurrence; of the type RestructuringType) Specifies the type of restructuring that is applicable.

**multipleHolderObligation** (zero or one occurrence; of the type Empty) In relation to a restructuring credit event, unless multiple holder obligation is not specified restructurings are limited to multiple holder obligations. A multiple holder obligation means an obligation that is held by more than three holders that are not affiliates of each other and where at least two thirds of the holders must agree to the event that constitutes the restructuring credit event. ISDA 2003 Term: Multiple Holder Obligation

**multipleCreditEventNotices** (zero or one occurrence; of the type Empty) Presence of this element indicates that Section 3.9 of the 2003 Credit Derivatives Definitions shall apply. Absence of this element indicates that Section 3.9 shall not apply. NOTE: Not allowed under ISDA Credit 1999.

### 1.29.3 Used by:

- Complex type: CreditEvents

### 1.29.4 Derived Types:

### 1.29.5 Figure:

### 1.29.6 Schema Fragment:

```
<xsd:complexType name="Restructuring">
  <xsd:sequence>

## 1.30 RestructuringType

### 1.30.1 Description:

### 1.30.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type xsd:normalizedString)

•

### 1.30.3 Used by:

- Complex type: Restructuring

### 1.30.4 Derived Types:

### 1.30.5 Figure:

### 1.30.6 Schema Fragment:

```
<xsd:complexType name="RestructuringType">
  <xsd:simpleContent>
    <xsd:extension base="xsd:normalizedString">
      <xsd:attribute name="restructuringScheme" type="xsd:anyURI" default="http://www.fpml.org" />
    </xsd:extension>
  </xsd:simpleContent>
</xsd:complexType>
```

## 1.31 StrategyFeature

### 1.31.1 Description:

A type for defining equity option simple strategy features

### 1.31.2 Contents:

Either

**strikeSpread** (exactly one occurrence; of the type StrikeSpread)

Or

**calendarSpread** (exactly one occurrence; of the type CalendarSpread)

### 1.31.3 Used by:

- Complex type: EquityDerivativeBase

### 1.31.4 Derived Types:

### 1.31.5 Figure:

### 1.31.6 Schema Fragment:

```
<xsd:complexType name="StrategyFeature">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A type for defining equity option simple strategy features
    </xsd:documentation>
  </xsd:annotation>
  <xsd:choice>
    <xsd:element name="strikeSpread" type="StrikeSpread"/>
    <xsd:element name="calendarSpread" type="CalendarSpread"/>
  </xsd:choice>
</xsd:complexType>
```

## 1.32 StrikeSpread

### 1.32.1 Description:

A type for defining a strike spread feature

### 1.32.2 Contents:

**upperStrike** (exactly one occurrence; of the type OptionStrike)

**upperStrikeNumberOfOptions** (exactly one occurrence; of the type xsd:decimal)

### 1.32.3 Used by:

- Complex type: StrategyFeature

### 1.32.4 Derived Types:

### 1.32.5 Figure:

### 1.32.6 Schema Fragment:

```
<xsd:complexType name="StrikeSpread">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A type for defining a strike spread feature
    </xsd:documentation>
  </xsd:annotation>
  <xsd:sequence>
    <xsd:element name="upperStrike" type="OptionStrike"/>
    <xsd:element name="upperStrikeNumberOfOptions" type="xsd:decimal"/>
  </xsd:sequence>
</xsd:complexType>
```

## 1.33 Trigger

### 1.33.1 Description:

Trigger point at which feature is effective

### 1.33.2 Contents:

Either

**level** (exactly one occurrence; of the type xsd:decimal) The trigger level.

Or

**levelPercentage** (exactly one occurrence; of the type xsd:decimal) The trigger level percentage.

### 1.33.3 Used by:

- Complex type: TriggerEvent

### 1.33.4 Derived Types:

### 1.33.5 Figure:

### 1.33.6 Schema Fragment:

```
<xsd:complexType name="Trigger">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      Trigger point at which feature is effective
    </xsd:documentation>
  </xsd:annotation>
  <xsd:choice>
    <xsd:element name="level" type="xsd:decimal">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          The trigger level.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
    <xsd:element name="levelPercentage" type="xsd:decimal">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          The trigger level percentage.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
  </xsd:choice>
  <xsd:choice>
    <xsd:annotation>
      <xsd:documentation xml:lang="en">
        Choice between either an explicit representation of Credit
        Events, or Credit Events defined elsewhere in the document.
      </xsd:documentation>
    </xsd:annotation>

    <xsd:element name="creditEventsReference" type="CreditEventsReference"/>
  </xsd:choice>
</xsd:complexType>
```

## 1.34 TriggerEvent

### 1.34.1 Description:

Observation point for trigger

### 1.34.2 Contents:

**schedule** (zero or more occurrences; of the type AveragingSchedule) A Equity Derivative schedule.

**triggerDates** (zero or one occurrence; of the type DateList) The trigger Dates

**trigger** (exactly one occurrence; of the type Trigger) The trigger level.

**featurePayment** (zero or one occurrence; of the type FeaturePayment) The feature payment.

### 1.34.3 Used by:

- Complex type: Barrier
- Complex type: Knock

### 1.34.4 Derived Types:

### 1.34.5 Figure:

### 1.34.6 Schema Fragment:

```
<xsd:complexType name="TriggerEvent">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      Observation point for trigger
    </xsd:documentation>
  </xsd:annotation>
  <xsd:sequence>
    <xsd:element name="schedule" type="AveragingSchedule" minOccurs="0" maxOccurs="unbounded">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          A Equity Derivative schedule.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
    <xsd:element name="triggerDates" type="DateList" minOccurs="0">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">

        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
    <xsd:element name="trigger" type="Trigger">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          The trigger level.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
    <xsd:element name="featurePayment" type="FeaturePayment" minOccurs="0">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          The feature payment.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
  </xsd:sequence>
</xsd:complexType>
```

## ***2 Groups***

## 2.1 OptionBaseFeature.model

### 2.1.1 Description:

A model group containing Option Base Feature Elements

### 2.1.2 Contents:

**fxFeature** (zero or one occurrence; of the type FxFeature) A quanto or composite FX feature.

**strategyFeature** (zero or one occurrence; of the type StrategyFeature) A simple strategy feature

### 2.1.3 Used by:

- Complex type: OptionFeature

### 2.1.4 Figure:

### 2.1.5 Schema Fragment:

```
<xsd:group name="OptionBaseFeature.model">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A model group containing Option Base Feature Elements
    </xsd:documentation>
  </xsd:annotation>

    <xsd:element name="fxFeature" type="FxFeature" minOccurs="0">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          A quanto or composite FX feature.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
    <xsd:element name="strategyFeature" type="StrategyFeature" minOccurs="0">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          A simple strategy feature
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
  </xsd:sequence>
</xsd:group>
```

## 2.2 OptionDenomination.model

### 2.2.1 Description:

A model group containing the option denomination components.

### 2.2.2 Contents:

**optionEntitlement** (exactly one occurrence; of the type PositiveDecimal) The number of units of underlying per option comprised in the option transaction.

**entitlementCurrency** (zero or one occurrence; of the type Currency) TODO

**numberOfOptions** (zero or one occurrence; of the type PositiveDecimal) The number of options comprised in the option transaction.

### 2.2.3 Used by:

- Complex type: OptionBaseExtended

### 2.2.4 Figure:

### 2.2.5 Schema Fragment:

```
<xsd:group name="OptionDenomination.model">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A model group containing the option denomination components.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:sequence>
    <xsd:element name="optionEntitlement" type="PositiveDecimal">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          The number of units of underlying per option comprised in the
          option transaction.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
    <xsd:element name="entitlementCurrency" type="Currency" minOccurs="0">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          TODO
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
    <xsd:element name="numberOfOptions" type="PositiveDecimal" minOccurs="0">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">

        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
  </xsd:sequence>
</xsd:group>
```

## 2.3 OptionFeature.model

### 2.3.1 Description:

A model group containing Option Base Feature Elements

### 2.3.2 Contents:

**asian** (zero or one occurrence; of the type Asian) An option where and average price is taken on valuation.

**barrier** (zero or one occurrence; of the type Barrier) An option with a barrier feature.

**knock** (zero or one occurrence; of the type Knock) A knock feature.

**passThrough** (zero or one occurrence; of the type PassThrough) Pass through payments from the underlying, such as dividends.

### 2.3.3 Used by:

- Complex type: OptionFeature

### 2.3.4 Figure:

### 2.3.5 Schema Fragment:

```
<xsd:group name="OptionFeature.model">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A model group containing Option Base Feature Elements

      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          Pass through payments from the underlying, such as dividends.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
  </xsd:sequence>
</xsd:group>
```

## 2.4 OptionSettlement.model

### 2.4.1 Description:

A group which has Option Settlement elements

### 2.4.2 Contents:

**settlementType** (exactly one occurrence; of the type SettlementTypeEnum)

**settlementDate** (zero or one occurrence; of the type AdjustableOrRelativeDate)

Either

**settlementAmount** (exactly one occurrence; of the type Money) Settlement Amount

Or

**settlementCurrency** (exactly one occurrence; of the type Currency) Settlement Currency for use where the Settlement Amount cannot be known in advance

### 2.4.3 Used by:

- Complex type: DirectionalLegUnderlyer
- Complex type: OptionBaseExtended

### 2.4.4 Figure:

### 2.4.5 Schema Fragment:

```
<xsd:group name="OptionSettlement.model">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A group which has Option Settlement elements

# ***1 Global Complex Types***

## 1.1 AffectedTransactions

### 1.1.1 Description:

### 1.1.2 Contents:

Either

**trade** (exactly one occurrence; of the type Trade) An element that allows the full details of the trade to be used as a mechanism for identifying the trade for which the post-trade event pertains

Or

**tradeReference** (exactly one occurrence; of the type PartyTradeIdentifiers) A container since an individual trade can be referenced by two or more different partyTradeIdentifier elements - each allocated by a different party.

### 1.1.3 Used by:

- Complex type: CreditEventNoticeDocument

### 1.1.4 Derived Types:

### 1.1.5 Figure:

### 1.1.6 Schema Fragment:

```
<xsd:complexType name="AffectedTransactions">  
  <xsd:group ref="TradeOrTradeReference.model" maxOccurs="unbounded" />  
</xsd:complexType>
```

## 1.2 Novation

### 1.2.1 Description:

An event type that records the occurrence of a novation

### 1.2.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type Event)

- A type defining the basic structure of FpML business events; it is refined by its derived types.

**transferor** (exactly one occurrence; of the type PartyReference) A pointer style reference to a party identifier defined elsewhere in the document. In a three-way novation the party referenced is the Transferor (outgoing party) in the novation. The Transferor means a party which transfers by novation to a Transferee all of its rights, liabilities, duties and obligations with respect to a Remaining Party. In a four-way novation the party referenced is Transferor 1 which transfers by novation to Transferee 1 all of its rights, liabilities, duties and obligations with respect to Transferor 2. ISDA 2004 Novation Term: Transferor (three-way novation) or Transferor 1 (four-way novation).

**transferee** (exactly one occurrence; of the type PartyReference) A pointer style reference to a party identifier defined elsewhere in the document. In a three-way novation the party referenced is the Transferee (incoming party) in the novation. Transferee means a party which accepts by way of novation all rights, liabilities, duties and obligations of a Transferor with respect to a Remaining Party. In a four-way novation the party referenced is Transferee 1 which accepts by way of novation the rights, liabilities, duties and obligations of Transferor 1. ISDA 2004 Novation Term: Transferee (three-way novation) or Transferee 1 (four-way novation).

**remainingParty** (exactly one occurrence; of the type PartyReference) A pointer style reference to a party identifier defined elsewhere in the document. In a three-way novation the party referenced is the Remaining Party in the novation. Remaining Party means a party which consents to a Transferor's transfer by novation and the acceptance thereof by the Transferee of all of the Transferor's rights, liabilities, duties and obligations with respect to such Remaining Party under and with respect of the Novated Amount of a transaction. In a four-way novation the party referenced is Transferor 2 per the ISDA definition and acts in the role of a Transferor. Transferor 2 transfers by novation to Transferee 2 all of its rights, liabilities, duties and obligations with respect to Transferor 1. ISDA 2004 Novation Term: Remaining Party (three-way novation) or Transferor 2 (four-way novation).

**otherRemainingParty** (zero or one occurrence; of the type PartyReference) A pointer style reference to a party identifier defined elsewhere in the document. This element is not applicable in a three-way novation and should be omitted. In a four-way novation the party referenced is Transferee 2. Transferee 2 means a party which accepts by way of novation the rights, liabilities, duties and obligations of Transferor 2. ISDA 2004 Novation Term: Transferee 2 (four-way novation).

**novationDate** (exactly one occurrence; of the type xsd:date) Specifies the date that one party's legal obligations with regard to a trade are transferred to another party. It corresponds to the Novation Date section of the 2004 ISDA Novation Definitions, section 1.16.

**novationTradeDate** (zero or one occurrence; of the type xsd:date) Specifies the date the parties agree to assign or novate a trade. If this element is not specified, the novationTradeDate will be deemed to be the novationDate. It corresponds to the Novation Trade Date section of the 2004 ISDA Novation Definitions, section 1.17.

Either

**novatedAmount** (exactly one occurrence; of the type Money) The amount which represents the portion of the Old Transaction being novated.

Or

**novatedNumberOfOptions** (exactly one occurrence; of the type xsd:decimal) The number of options which represent the portion of the Old Transaction being novated.

**remainingTrade** (zero or one occurrence; of the type Trade) This element contains a description of the remaining portion of a partially novated trade.

**fullFirstCalculationPeriod** (zero or one occurrence; of the type xsd:boolean) This element corresponds to the applicability of the Full First Calculation Period as defined in the 2004 ISDA Novation Definitions, section 1.20.

**firstPeriodStartDate** (zero or one occurrence; of the type FirstPeriodStartDate) Element that is used to be able to make sense of the "new transaction" without requiring reference back to the "old transaction". In the case of interest rate products there are potentially 2 "first period start dates" to reference – one with respect to each party to the new transaction. For Credit Default Swaps there is just the one with respect to the party that

is the fixed rate payer.

**nonReliance** (zero or one occurrence; of the type Empty) This element corresponds to the non-Reliance section in the 2004 ISDA Novation Definitions, section 2.1 (c) (i). The element appears in the instance document when non-Reliance is applicable.

**creditDerivativesNotices** (zero or one occurrence; of the type CreditDerivativesNotices) This element should be specified if one or more of either a Credit Event Notice, Notice of Publicly Available Information, Notice of Physical Settlement or Notice of Intended Physical Settlement, as applicable, has been delivered by or to the Transferor or the Remaining Party. The type of notice or notices that have been delivered should be indicated by setting the relevant boolean element value(s) to true. The absence of the element means that no Credit Event Notice, Notice of Publicly Available Information, Notice of Physical Settlement or Notice of Intended Physical Settlement, as applicable, has been delivered by or to the Transferor or the Remaining Party.

**contractualDefinitions** (zero or more occurrences; of the type ContractualDefinitions) The definitions (such as those published by ISDA) that will define the terms of the novation transaction.

Either

**contractualSupplement** (zero or more occurrences; of the type ContractualSupplement) DEPRECATED - This element will be removed in the next major version of FpML. The element contractualTermsSupplement should be used instead. Definition: A contractual supplement (such as those published by ISDA) that will apply to the trade.

Or

**contractualTermsSupplement** (zero or more occurrences; of the type ContractualTermsSupplement) A contractual supplement (such as those published by ISDA) that will apply to the trade.

**payment** (zero or one occurrence; of the type Payment)

### 1.2.3 Used by:

### 1.2.4 Derived Types:

### 1.2.5 Figure:

### 1.2.6 Schema Fragment:

```
<xsd:complexType name="Novation">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      An event type that records the occurrence of a novation
    </xsd:documentation>
  </xsd:annotation>

    <xsd:extension base="Event">
      <xsd:sequence>
        <xsd:group ref="NovationDetails.model"/>
        <xsd:element name="payment" type="Payment" minOccurs="0"/>
      </xsd:sequence>
    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

## 1.3 NovationNotificationMessage

### 1.3.1 Description:

Abstract base class for all Novation Notification Messages.

### 1.3.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type NotificationMessage)

- A type defining the basic content for a message sent to inform another system that some 'business event' has occurred. Notifications are not expected to be replied to.

**novation** (exactly one occurrence; of the type Novation)

**party** (one or more occurrences; of the type Party)

### 1.3.3 Used by:

- Complex type: NovationAlleged
- Complex type: NovationConfirmed
- Complex type: NovationMatched
- Complex type: TradeNovated

### 1.3.4 Derived Types:

- Complex type: NovationAlleged
- Complex type: NovationConfirmed
- Complex type: NovationMatched
- Complex type: TradeNovated

### 1.3.5 Figure:

### 1.3.6 Schema Fragment:

```
<xsd:complexType name="NovationNotificationMessage" abstract="true">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      Abstract base class for all Novation Notification Messages.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:complexContent>
    <xsd:extension base="NotificationMessage">
      <xsd:sequence>
        <xsd:group ref="NovationMessage.model" />
      </xsd:sequence>
    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

## 1.4 NovationRequestMessage

### 1.4.1 Description:

Abstract base class for all Novation Request Messages.

### 1.4.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type RequestMessage)

- A type defining the basic content of a message that requests the receiver to perform some business operation determined by the message type and its content.

**novation** (exactly one occurrence; of the type Novation)

**party** (one or more occurrences; of the type Party)

### 1.4.3 Used by:

- Complex type: NovateTrade
- Complex type: NovationConsentRequest
- Complex type: RequestNovationConfirmation

### 1.4.4 Derived Types:

- Complex type: NovateTrade
- Complex type: NovationConsentRequest
- Complex type: RequestNovationConfirmation

### 1.4.5 Figure:

### 1.4.6 Schema Fragment:

```
<xsd:complexType name="NovationRequestMessage" abstract="true">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      Abstract base class for all Novation Request Messages.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:complexContent>
    <xsd:extension base="RequestMessage">
      <xsd:sequence>
        <xsd:group ref="NovationMessage.model"/>
      </xsd:sequence>
    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

## 1.5 NovationResponseMessage

### 1.5.1 Description:

Abstract base class for all Novation Response Messages.

### 1.5.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type ResponseMessage)

- A type refining the generic message content model to make it specific to response messages.

### 1.5.3 Used by:

- Complex type: NovationConsentGranted
- Complex type: NovationConsentRefused

### 1.5.4 Derived Types:

- Complex type: NovationConsentGranted
- Complex type: NovationConsentRefused

### 1.5.5 Figure:

### 1.5.6 Schema Fragment:

```
<xsd:complexType name="NovationResponseMessage" abstract="true">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      Abstract base class for all Novation Response Messages.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:complexContent>
    <xsd:extension base="ResponseMessage">
      <xsd:sequence>
        <xsd:sequence minOccurs="0">
          <xsd:group ref="NovationMessage.model"/>
        </xsd:sequence>
      </xsd:sequence>
    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

## 1.6 PartialTerminationAmount

### 1.6.1 Description:

### 1.6.2 Contents:

### 1.6.3 Used by:

### 1.6.4 Derived Types:

### 1.6.5 Figure:

### 1.6.6 Schema Fragment:

```
<xsd:complexType name="PartialTerminationAmount">
  <xsd:sequence>

            Specifies the fixed amount by which the Number of Options
            decreases due to the Partial Termination transaction.
          </xsd:documentation>
        </xsd:annotation>
      </xsd:element>
      <xsd:element name="outstandingNumberOfOptions" type="xsd:decimal">
        <xsd:annotation>
          <xsd:documentation xml:lang="en">
            Specifies the Number of Options after the Partial
            Termination.
          </xsd:documentation>
        </xsd:annotation>
      </xsd:element>
    </xsd:sequence>
  </xsd:sequence>
</xsd:complexType>
```

## 1.7 Termination

### 1.7.1 Description:

An event type that defines the content of a Termination transaction.

### 1.7.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type Event)

- A type defining the basic structure of FpML business events; it is refined by its derived types.

Either

**trade** (exactly one occurrence; of the type Trade) An element that allows the full details of the trade to be used as a mechanism for identifying the trade for which the post-trade event pertains

Or

**tradeReference** (exactly one occurrence; of the type PartyTradeIdentifiers) A container since an individual trade can be referenced by two or more different partyTradeIdentifier elements - each allocated by a different party.

**terminationTradeDate** (exactly one occurrence; of the type xsd:date) The date on which the the parties enter into the Termination transaction.

**terminationEffectiveDate** (exactly one occurrence; of the type xsd:date) The date on which the Termination becomes effective.

Either

**full** (exactly one occurrence; of the type Empty) The use of the Full element indicates that this is a Full Termination.

Or

**partial** (exactly one occurrence; of the type PartialTerminationAmount) The use of the Partial element indicates that this is a Partial Termination.

**payment** (zero or one occurrence; of the type Payment) A payment for the right to terminate the trade.

### 1.7.3 Used by:

- Complex type: RequestTerminationConfirmation
- Complex type: TerminationConfirmed
- Complex type: TradeTerminationRequest
- Complex type: TradeTerminationResponse

### 1.7.4 Derived Types:

### 1.7.5 Figure:

## 1.8 TradeAmendment

### 1.8.1 Description:

A type describing the original trade and the amended trade.

### 1.8.2 Contents:

Either

**originalTrade** (exactly one occurrence; of the type Trade) The entire original trade details.

Or

**originalTradeIdentifier** (one or more occurrences; of the type PartyTradeIdentifier) The trade id of the original trade details.

**amendedTrade** (exactly one occurrence; of the type Trade) The representation of the amended trade.

### 1.8.3 Used by:

- Complex type: AllocationAmended

### 1.8.4 Derived Types:

### 1.8.5 Figure:

### 1.8.6 Schema Fragment:

          The representation of the amended trade.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
  </xsd:sequence>
</xsd:complexType>
```

## ***2 Groups***

## 2.1 NovationDetails.model

### 2.1.1 Description:

### 2.1.2 Contents:

**transferor** (exactly one occurrence; of the type PartyReference) A pointer style reference to a party identifier defined elsewhere in the document. In a three-way novation the party referenced is the Transferor (outgoing party) in the novation. The Transferor means a party which transfers by novation to a Transferee all of its rights, liabilities, duties and obligations with respect to a Remaining Party. In a four-way novation the party referenced is Transferor 1 which transfers by novation to Transferee 1 all of its rights, liabilities, duties and obligations with respect to Transferor 2. ISDA 2004 Novation Term: Transferor (three-way novation) or Transferor 1 (four-way novation).

**transferee** (exactly one occurrence; of the type PartyReference) A pointer style reference to a party identifier defined elsewhere in the document. In a three-way novation the party referenced is the Transferee (incoming party) in the novation. Transferee means a party which accepts by way of novation all rights, liabilities, duties and obligations of a Transferor with respect to a Remaining Party. In a four-way novation the party referenced is Transferee 1 which accepts by way of novation the rights, liabilities, duties and obligations of Transferor 1. ISDA 2004 Novation Term: Transferee (three-way novation) or Transferee 1 (four-way novation).

**remainingParty** (exactly one occurrence; of the type PartyReference) A pointer style reference to a party identifier defined elsewhere in the document. In a three-way novation the party referenced is the Remaining Party in the novation. Remaining Party means a party which consents to a Transferor's transfer by novation and the acceptance thereof by the Transferee of all of the Transferor's rights, liabilities, duties and obligations with respect to such Remaining Party under and with respect of the Novated Amount of a transaction. In a four-way novation the party referenced is Transferor 2 per the ISDA definition and acts in the role of a Transferor. Transferor 2 transfers by novation to Transferee 2 all of its rights, liabilities, duties and obligations with respect to Transferor 1. ISDA 2004 Novation Term: Remaining Party (three-way novation) or Transferor 2 (four-way novation).

**otherRemainingParty** (zero or one occurrence; of the type PartyReference) A pointer style reference to a party identifier defined elsewhere in the document. This element is not applicable in a three-way novation and should be omitted. In a four-way novation the party referenced is Transferee 2. Transferee 2 means a party which accepts by way of novation the rights, liabilities, duties and obligations of Transferor 2. ISDA 2004 Novation Term: Transferee 2 (four-way novation).

**novationDate** (exactly one occurrence; of the type xsd:date) Specifies the date that one party's legal obligations with regard to a trade are transferred to another party. It corresponds to the Novation Date section of the 2004 ISDA Novation Definitions, section 1.16.

**novationTradeDate** (zero or one occurrence; of the type xsd:date) Specifies the date the parties agree to assign or novate a trade. If this element is not specified, the novationTradeDate will be deemed to be the novationDate. It corresponds to the Novation Trade Date section of the 2004 ISDA Novation Definitions, section 1.17.

Either

**novatedAmount** (exactly one occurrence; of the type Money) The amount which represents the portion of the Old Transaction being novated.

Or

**novatedNumberOfOptions** (exactly one occurrence; of the type xsd:decimal) The number of options which represent the portion of the Old Transaction being novated.

**remainingTrade** (zero or one occurrence; of the type Trade) This element contains a description of the remaining portion of a partially novated trade.

**fullFirstCalculationPeriod** (zero or one occurrence; of the type xsd:boolean) This element corresponds to the applicability of the Full First Calculation Period as defined in the 2004 ISDA Novation Definitions, section 1.20.

**firstPeriodStartDate** (zero or one occurrence; of the type FirstPeriodStartDate) Element that is used to be able to make sense of the "new transaction" without requiring reference back to the "old transaction". In the case of interest rate products there are potentially 2 "first period start dates" to reference – one with respect to each party to the new transaction. For Credit Default Swaps there is just the one with respect to the party that is the fixed rate payer.

**nonReliance** (zero or one occurrence; of the type Empty) This element corresponds to the non-Reliance section in the 2004 ISDA Novation Definitions, section 2.1 (c) (i). The element appears in the instance document when non-Reliance is applicable.

**creditDerivativesNotices** (zero or one occurrence; of the type CreditDerivativesNotices) This element should be specified if one or more of either a Credit Event Notice, Notice of Publicly Available Information, Notice of Physical Settlement or Notice of Intended Physical Settlement, as applicable, has been delivered by or to the Transferor or the Remaining Party. The type of notice or notices that have been delivered should be indicated by setting the relevant boolean element value(s) to true. The absence of the element means that no Credit Event Notice, Notice of Publicly Available Information, Notice of Physical Settlement or Notice of Intended Physical Settlement, as applicable, has been delivered by or to the Transferor or the Remaining Party.

**contractualDefinitions** (zero or more occurrences; of the type ContractualDefinitions) The definitions (such as those published by ISDA) that will define the terms of the novation transaction.

Either

**contractualSupplement** (zero or more occurrences; of the type ContractualSupplement) DEPRECATED - This element will be removed in the next major version of FpML. The element contractualTermsSupplement should be used instead. Definition: A contractual supplement (such as those published by ISDA) that will apply to the trade.

Or

**contractualTermsSupplement** (zero or more occurrences; of the type ContractualTermsSupplement) A contractual supplement (such as those published by ISDA) that will apply to the trade.

## 2.2 NovationMessage.model

### 2.2.1 Description:

### 2.2.2 Contents:

**novation** (exactly one occurrence; of the type Novation)

**party** (one or more occurrences; of the type Party)

### 2.2.3 Used by:

- Complex type: NovationNotificationMessage
- Complex type: NovationRequestMessage
- Complex type: NovationResponseMessage

### 2.2.4 Figure:

### 2.2.5 Schema Fragment:

```
<xsd:group name="NovationMessage.model">
  <xsd:sequence>
    <xsd:element name="novation" type="Novation"/>
    <xsd:element name="party" type="Party" minOccurs="3" maxOccurs="unbounded"/>
  </xsd:sequence>
</xsd:group>
```

## 2.3 TerminationDetails.model

### 2.3.1 Description:

### 2.3.2 Contents:

**terminationTradeDate** (exactly one occurrence; of the type xsd:date) The date on which the the parties enter into the Termination transaction.

**terminationEffectiveDate** (exactly one occurrence; of the type xsd:date) The date on which the Termination becomes effective.

Either

**full** (exactly one occurrence; of the type Empty) The use of the Full element indicates that this is a Full Termination.

Or

**partial** (exactly one occurrence; of the type PartialTerminationAmount) The use of the Partial element indicates that this is a Partial Termination.

### 2.3.3 Used by:

- Complex type: Termination

### 2.3.4 Figure:

### 2.3.5 Schema Fragment:

# ***1 Global Complex Types***

## 1.1 PortfolioValuationItem

### 1.1.1 Description:

A type used in valuation enquiry messages which relates a portfolio to its trades and current value.

### 1.1.2 Contents:

**portfolio** (exactly one occurrence; of the type Portfolio) Global portfolio element used as a basis for a substitution group.

**tradeValuationItem** (zero or more occurrences; of the type TradeValuationItem) Zero or more trade valuation items.

**valuationSet** (zero or one occurrence; of the type ValuationSet)

### 1.1.3 Used by:

- Complex type: RequestValuationReport
- Complex type: ValuationReport

### 1.1.4 Derived Types:

### 1.1.5 Figure:

### 1.1.6 Schema Fragment:

```
<xsd:complexType name="PortfolioValuationItem">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A type used in valuation enquiry messages which relates a
      portfolio to its trades and current value.

      </xsd:annotation>
    </xsd:element>
  </xsd:sequence>
</xsd:complexType>
```

## 1.2 PositionReport

### 1.2.1 Description:

A type defining the content model for a message allowing one party to send a report consisting of positions.

### 1.2.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type NotificationMessage)

- A type defining the basic content for a message sent to inform another system that some 'business event' has occurred. Notifications are not expected to be replied to.

**asOfDate** (zero or one occurrence; of the type IdentifiedDate) The date for which this document reports positions and valuations.

**dataSetName** (zero or one occurrence; of the type xsd:string) The name of the data set (portfolio, product type, etc.) that this report corresponds to. Used to help document the contents of the report.

**quotationCharacteristics** (zero or one occurrence; of the type QuotationCharacteristics) The default quotation characteristics for this document (e.g. currency, location). Currency must be specified; other fields may be specified.

**position** (one or more occurrences; of the type Position) The positions included in the position report.

**party** (one or more occurrences; of the type Party) The parties whose trades are included included in this position report.

### 1.2.3 Used by:

### 1.2.4 Derived Types:

### 1.2.5 Figure:

## 1.4 RequestPositionReport

### 1.4.1 Description:

A type defining the content model for a message requesting a position report .

### 1.4.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type RequestMessage)

- A type defining the basic content of a message that requests the receiver to perform some business operation determined by the message type and its content.

**asOfDate** (zero or one occurrence; with locally defined content) The date for which this request desires positions and valuations.

Either

**dataSetName** (exactly one occurrence; of the type xsd:normalizedString) The name of the data set (portfolio, product type, etc.) that this request corresponds to. Describes the desired report.

Or

**requestedPositions** (exactly one occurrence; of the type RequestedPositions) The name of the data set (portfolio, product type, etc.) that this request corresponds to. Describes the desired report.

**party** (zero or more occurrences; of the type Party)

### 1.4.3 Used by:

### 1.4.4 Derived Types:

## 1.5 RequestValuationReport

### 1.5.1 Description:

A type defining the content model for a message allowing one party a report containing valuations of one or many existing trades.

### 1.5.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type RequestMessage)

- A type defining the basic content of a message that requests the receiver to perform some business operation determined by the message type and its content.

**party** (one or more occurrences; of the type Party)

**market** (zero or one occurrence; of the type Market) This is a global element used for creating global types. It holds Market information, e.g. curves, surfaces, quotes, etc.

**portfolioValuationItem** (zero or more occurrences; of the type PortfolioValuationItem) An instance of a unique portfolio valuation.

**tradeValuationItem** (zero or more occurrences; of the type TradeValuationItem) An instance of a unique trade valuation.

### 1.5.3 Used by:

### 1.5.4 Derived Types:

### 1.5.5 Figure:

### 1.5.6 Schema Fragment:

```
<xsd:complexType name="RequestValuationReport">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A type defining the content model for a message allowing one
      party a report containing valuations of one or many existing
      trades.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:complexContent>
    <xsd:extension base="RequestMessage">
      <xsd:sequence>
        <xsd:element name="party" type="Party" maxOccurs="unbounded"/>
        <xsd:element ref="market" minOccurs="0"/>
        <xsd:element name="portfolioValuationItem" type="PortfolioValuationItem" minOccurs="0"
          <xsd:annotation>
            <xsd:documentation xml:lang="en">
              An instance of a unique portfolio valuation.
            </xsd:documentation>
          </xsd:annotation>
        </xsd:element>
        <xsd:element name="tradeValuationItem" type="TradeValuationItem" minOccurs="0" maxOccurs="unbounded"
          <xsd:annotation>
            <xsd:documentation xml:lang="en">
              An instance of a unique trade valuation.
            </xsd:documentation>
          </xsd:annotation>
        </xsd:element>
      </xsd:sequence>
    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

## 1.6 TradeValuationItem

### 1.6.1 Description:

A type used in trade valuation enquiry messages which relates a trade identifier to its current value.

### 1.6.2 Contents:

Either

**partyTradeIdentifier** (one or more occurrences; of the type PartyTradeIdentifier) One or more trade identifiers needed to uniquely identify a trade.

Or

**trade** (exactly one occurrence; of the type Trade) Fully-described trades whose values are reported.

**valuationSet** (exactly one occurrence; of the type ValuationSet)

### 1.6.3 Used by:

- Complex type: PortfolioValuationItem
- Complex type: RequestValuationReport
- Complex type: ValuationReport

### 1.6.4 Derived Types:

### 1.6.5 Figure:

### 1.6.6 Schema Fragment:

```
<xsd:complexType name="TradeValuationItem">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A type used in trade valuation enquiry messages which relates a

          <xsd:documentation xml:lang="en">
            One or more trade identifiers needed to uniquely identify a
            trade.
          </xsd:documentation>
        </xsd:annotation>
      </xsd:element>
      <xsd:element name="trade" type="Trade">
        <xsd:annotation>
          <xsd:documentation xml:lang="en">
            Fully-described trades whose values are reported.
          </xsd:documentation>
        </xsd:annotation>
      </xsd:element>
    </xsd:choice>
    <xsd:element ref="valuationSet">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          The trade valuation.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
  </xsd:sequence>
</xsd:complexType>
```

## 1.7 ValuationReport

### 1.7.1 Description:

A type defining the content model for a message normally generated in response to a RequestValuationReport request.

### 1.7.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type NotificationMessage)

- A type defining the basic content for a message sent to inform another system that some 'business event' has occurred. Notifications are not expected to be replied to.

**party** (one or more occurrences; of the type Party)

**market** (zero or one occurrence; of the type Market) This is a global element used for creating global types. It holds Market information, e.g. curves, surfaces, quotes, etc.

**portfolioValuationItem** (zero or more occurrences; of the type PortfolioValuationItem) An instance of a unique portfolio valuation.

**tradeValuationItem** (zero or more occurrences; of the type TradeValuationItem) A collection of data values describing the state of the given trade.

### 1.7.3 Used by:

### 1.7.4 Derived Types:

### 1.7.5 Figure:

### 1.7.6 Schema Fragment:

```
<xsd:complexType name="ValuationReport">
  <xsd:annotation>

```

## ***2 Global Elements***

## 2.1 portfolio

### 2.1.1 Description:

Global portfolio element used as a basis for a substitution group.

### 2.1.2 Contents:

Element portfolio is defined by the complex type Portfolio

### 2.1.3 Used by:

- Complex type: PortfolioValuationItem

### 2.1.4 Substituted by:

- Element: queryPortfolio

### 2.1.5 Figure:

### 2.1.6 Schema Fragment:

```
<xsd:element name="portfolio" type="Portfolio">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      Global portfolio element used as a basis for a substitution
      group.
    </xsd:documentation>
  </xsd:annotation>
</xsd:element>
```

## **2.2 queryPortfolio**

### **2.2.1 Description:**

Global element used to substitute for "portfolio".

### **2.2.2 Contents:**

Element queryPortfolio is defined by the complex type QueryPortfolio

### **2.2.3 Used by:**

### **2.2.4 Substituted by:**

### **2.2.5 Figure:**

### **2.2.6 Schema Fragment:**

```
<xsd:element name="queryPortfolio" type="QueryPortfolio" substitutionGroup="portfolio">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      Global element used to substitute for "portfolio".
    </xsd:documentation>
  </xsd:annotation>
</xsd:element>
```

# ***1 Global Complex Types***

## 1.1 DeprecatedEquityLeg

### 1.1.1 Description:

This type has been DEPRECATED. It will be removed in the next FpML major version. A type describing the equity leg of a return type swap.

### 1.1.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type ReturnSwapLeg)

- The abstract base class for all types of Return Swap Leg.

**effectiveDate** (exactly one occurrence; of the type AdjustableOrRelativeDate) Specifies the effective date of the equity leg of the swap. When defined in relation to a date specified somewhere else in the document (through the relativeDate component), this element will typically point to the effective date of the other leg of the swap.

**terminationDate** (exactly one occurrence; of the type AdjustableOrRelativeDate) Specifies the termination date of the equity leg of the swap. When defined in relation to a date specified somewhere else in the document (through the relativeDate component), this element will typically point to the termination date of the other leg of the swap.

**underlyer** (exactly one occurrence; of the type Underlyer) Specifies the underlying component of the return type swap, which can be either one or many and consists in either equity, index or convertible bond component, or a combination of these.

**valuation** (exactly one occurrence; of the type DeprecatedEquityLegValuation) Specifies the terms of the initial price of the return type swap and of the subsequent valuations of the equity underlyer.

**notional** (exactly one occurrence; of the type ReturnSwapNotional) Specifies the notional of a return type swap. When used in the equity leg, the definition will typically combine the actual amount (using the notional component defined by the FpML industry group) and the determination method. When used in the interest leg, the definition will typically point to the definition of the equity leg.

**equityAmount** (exactly one occurrence; of the type ReturnSwapAmount) Specifies, in relation to each Equity Payment Date, the amount to which the Equity Payment Date relates. Unless otherwise specified, this term has the meaning defined in the ISDA 2002 Equity Derivatives Definitions.

**return** (exactly one occurrence; of the type Return) Specifies the conditions under which dividend affecting the underlyer will be paid to the receiver of the equity amounts.

**notionalAdjustments** (exactly one occurrence; of the type NotionalAdjustmentEnum) Specifies the conditions that govern the adjustment to the number of units of the equity swap.

**fxFeature** (zero or one occurrence; of the type FxFeature) A quanto or composite FX feature.

## 1.2 DeprecatedEquityLegValuation

### 1.2.1 Description:

This type has been DEPRECATED. It will be removed in the next FpML major version. A type describing the initial and final valuation of the equity underlyer.

### 1.2.2 Contents:

**initialPrice** (exactly one occurrence; of the type `DeprecatedEquityLegValuationPrice`) Specifies the initial reference price of the equity underlyer. This price can be expressed either as an actual amount/currency, as a determination method, or by reference to another value specified in the swap document.

**equityNotionalReset** (exactly one occurrence; of the type `xsd:boolean`) The term "Equity Notional Reset" is assumed to have the meaning as defined in the ISDA 2002 Equity Derivatives Definitions. The reference to the ISDA definition is either "Applicable" or "Inapplicable".

**valuationPriceInterim** (zero or one occurrence; of the type `DeprecatedEquityLegValuationPrice`) Specifies the interim valuation price of the equity underlyer. This price can be expressed either as an actual amount/currency, as a determination method, or by reference to another value specified in the swap document.

**valuationPriceFinal** (exactly one occurrence; of the type `DeprecatedEquityLegValuationPrice`) Specifies the final valuation price of the equity underlyer. This price can be expressed either as an actual amount/currency, as a determination method, or by reference to another value specified in the swap document.

**equityPaymentDates** (exactly one occurrence; of the type `DeprecatedEquityPaymentDates`) Specifies the equity payment dates of the swap.

### 1.2.3 Used by:

- Complex type: `DeprecatedEquityLeg`

### 1.2.4 Derived Types:

## 1.5 EquitySwapTransactionSupplement

### 1.5.1 Description:

A type for defining Equity Swap Transaction Supplement

### 1.5.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type ReturnSwapBase)

- A type describing the components that are common for return type swaps, including short and long form equity swaps representations.

**mutualEarlyTermination** (zero or one occurrence; of the type xsd:boolean) Used for specifying whether the Mutual Early Termination Right that is detailed in the Master Confirmation will apply.

**multipleExchangeIndexAnnexFallback** (zero or one occurrence; of the type xsd:boolean) Used for specifying whether additional annex terms for trades with underlyers that are listed on multiple exchanges, as defined in the European Master Confirmation, will apply.

**localJurisdiction** (zero or one occurrence; of the type Country) Local Jurisdiction is a term used in the AEJ Master Confirmation, which is used to determine local taxes, which shall mean taxes, duties, and similar charges imposed by the taxing authority of the Local Jurisdiction If this element is not present Local Jurisdiction is Not Applicable.

### 1.5.3 Used by:

# ***1 Global Complex Types***

## 1.1 AssetOrTermPointOrPricingStructureReference

### 1.1.1 Description:

Reference to an underlying asset, term point or pricing structure (yield curve).

### 1.1.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type Reference)

- The abstract base class for all types which define intra-document pointers.

### 1.1.3 Used by:

- Complex type: PricingParameterDerivative
- Complex type: PricingParameterShift

### 1.1.4 Derived Types:

### 1.1.5 Figure:

### 1.1.6 Schema Fragment:

```
<xsd:complexType name="AssetOrTermPointOrPricingStructureReference">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      Reference to an underlying asset, term point or pricing structure
      (yield curve).
    </xsd:documentation>
  </xsd:annotation>
  <xsd:complexContent>
    <xsd:extension base="Reference">
      <xsd:attribute name="href" type="xsd:IDREF" use="required"/>
    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

## 1.2 BasicAssetValuation

### 1.2.1 Description:

A structure that holds a set of measures about an asset.

### 1.2.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type Valuation)

- A valuation of an valuable object - an asset or a pricing input. This is an abstract type, used as a base for values of pricing structures such as yield curves as well as asset values.

**quote** (one or more occurrences; of the type BasicQuotation) One or more numerical measures relating to the asset, possibly together with sensitivities of that measure to pricing inputs

### 1.2.3 Used by:

- Complex type: QuotedAssetSet

### 1.2.4 Derived Types:

### 1.2.5 Figure:

### 1.2.6 Schema Fragment:

```
<xsd:complexType name="BasicAssetValuation">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A structure that holds a set of measures about an asset.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:complexContent>
    <xsd:extension base="Valuation">
      <xsd:sequence>
        <xsd:element name="quote" type="BasicQuotation" maxOccurs="unbounded">
          <xsd:annotation>
            <xsd:documentation xml:lang="en">
              One or more numerical measures relating to the asset,
              possibly together with sensitivities of that measure to
              pricing inputs
            </xsd:documentation>
          </xsd:annotation>
        </xsd:element>
      </xsd:sequence>
    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

## 1.3 DenominatorTerm

### 1.3.1 Description:

The type defining a denominator term of the formula. Its value is (sum of weighted partials) ^ power.

### 1.3.2 Contents:

**weightedPartial** (exactly one occurrence; of the type WeightedPartialDerivative) A partial derivative multiplied by a weighting factor.

**power** (exactly one occurrence; of the type xsd:positiveInteger) The power to which this term is raised.

### 1.3.3 Used by:

- Complex type: DerivativeFormula

### 1.3.4 Derived Types:

### 1.3.5 Figure:

### 1.3.6 Schema Fragment:

```
<xsd:complexType name="DenominatorTerm">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      The type defining a denominator term of the formula. Its value is
      (sum of weighted partials) ^ power.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:sequence>
    <xsd:element name="weightedPartial" type="WeightedPartialDerivative">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          A partial derivative multiplied by a weighting factor.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
    <xsd:element name="power" type="xsd:positiveInteger">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          The power to which this term is raised.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
  </xsd:sequence>
</xsd:complexType>
```

## 1.4 DerivativeCalculationMethod

### 1.4.1 Description:

The method by which a derivative is computed.

### 1.4.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type xsd:normalizedString)

•

### 1.4.3 Used by:

- Complex type: DerivativeCalculationProcedure

### 1.4.4 Derived Types:

### 1.4.5 Figure:

### 1.4.6 Schema Fragment:

```
<xsd:complexType name="DerivativeCalculationMethod">
  <xsd:annotation>
    <xsd:documentation source="http://www.FpML.org" xml:lang="en">
      The method by which a derivative is computed.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:simpleContent>
    <xsd:extension base="xsd:normalizedString">
      <xsd:attribute name="derivativeCalculationMethodScheme" type="xsd:anyURI" default="http:" />
    </xsd:extension>
  </xsd:simpleContent>
</xsd:complexType>
```

## 1.5 DerivativeCalculationProcedure

### 1.5.1 Description:

A description of how a numerical derivative is computed.

### 1.5.2 Contents:

**method** (zero or one occurrence; of the type DerivativeCalculationMethod) The method by which a derivative is computed, e.g. analytic, numerical model, perturbation, etc.

### 1.5.3 Used by:

- Complex type: PricingParameterDerivative
- Complex type: SensitivitySetDefinition

### 1.5.4 Derived Types:

### 1.5.5 Figure:

### 1.5.6 Schema Fragment:

```
<xsd:complexType name="DerivativeCalculationProcedure">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A description of how a numerical derivative is computed.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:sequence>
    <xsd:element name="method" type="DerivativeCalculationMethod" minOccurs="0">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          The method by which a derivative is computed, e.g. analytic,
          numerical model, perturbation, etc.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
    <xsd:group ref="DerivativeCalculationParameters.model" minOccurs="0"/>
  </xsd:sequence>
</xsd:complexType>
```

## 1.6 DerivativeFormula

### 1.6.1 Description:

A formula for computing a complex derivative from partial derivatives. Its value is the sum of the terms divided by the product of the denominator terms.

### 1.6.2 Contents:

**term** (exactly one occurrence; of the type FormulaTerm) A term of the formula. Its value is the product of the its coefficient and the referenced partial derivatives.

**denominatorTerm** (exactly one occurrence; of the type DenominatorTerm) A denominator term of the formula. Its value is (sum of weighted partials) ^ power.

### 1.6.3 Used by:

### 1.6.4 Derived Types:

### 1.6.5 Figure:

### 1.6.6 Schema Fragment:

```
<xsd:complexType name="DerivativeFormula">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A formula for computing a complex derivative from partial
      derivatives. Its value is the sum of the terms divided by the
      product of the denominator terms.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:sequence>
    <xsd:element name="term" type="FormulaTerm">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          A term of the formula. Its value is the product of the its
          coefficient and the referenced partial derivatives.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
    <xsd:element name="denominatorTerm" type="DenominatorTerm">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          A denominator term of the formula. Its value is (sum of
          weighted partials) ^ power.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
  </xsd:sequence>
</xsd:complexType>
```

## 1.7 FormulaTerm

### 1.7.1 Description:

A type defining a term of the formula. Its value is the product of the its coefficient and the referenced partial derivatives.

### 1.7.2 Contents:

**coefficient** (exactly one occurrence; of the type `xsd:decimal`) The coefficient by which this term is multiplied, typically 1 or -1.

**partialDerivativeReference** (one or more occurrences; of the type `PricingParameterDerivativeReference`) A reference to the partial derivative.

### 1.7.3 Used by:

- Complex type: `DerivativeFormula`

### 1.7.4 Derived Types:

### 1.7.5 Figure:

### 1.7.6 Schema Fragment:

```
<xsd:complexType name="FormulaTerm">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A type defining a term of the formula. Its value is the product
      of the its coefficient and the referenced partial derivatives.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:sequence>
    <xsd:element name="coefficient" type="xsd:decimal">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          The coefficient by which this term is multiplied, typically 1
          or -1.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
    <xsd:element name="partialDerivativeReference" type="PricingParameterDerivativeReference" n
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          A reference to the partial derivative.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
  </xsd:sequence>
</xsd:complexType>
```

## 1.8 GenericDimension

### 1.8.1 Description:

A generic (user defined) dimension, e.g. for use in a correlation surface. e.g. a currency, stock, etc. This would take values like USD, GBP, JPY, or IBM, MSFT, etc.

### 1.8.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type xsd:string)

### • 1.8.3 Used by:

### 1.8.4 Derived Types:

### 1.8.5 Figure:

### 1.8.6 Schema Fragment:

```
<xsd:complexType name="GenericDimension">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A generic (user defined) dimension, e.g. for use in a correlation
      surface. e.g. a currency, stock, etc. This would take values like
      USD, GBP, JPY, or IBM, MSFT, etc.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:simpleContent>
    <xsd:extension base="xsd:string">
      <xsd:attribute name="name" type="xsd:normalizedString" use="required">
        <xsd:annotation>
          <xsd:documentation xml:lang="en">
            The name of the dimension. E.g.: "Currency", "Stock",
            "Issuer", etc.
          </xsd:documentation>
        </xsd:annotation>
      </xsd:attribute>
      <xsd:attribute name="href" type="xsd:IDREF" ecore:reference="Asset">
        <xsd:annotation>
          <xsd:documentation xml:lang="en">
            A reference to an instrument (e.g. currency) that this
            value represents.
          </xsd:documentation>
        </xsd:annotation>
      </xsd:attribute>
    </xsd:extension>
  </xsd:simpleContent>
</xsd:complexType>
```

## 1.9 InstrumentSet

### 1.9.1 Description:

A collection of instruments usable for quotation purposes. In future releases, quotable derivative assets may be added after the underlying asset.

### 1.9.2 Contents:

**underlyingAsset** (zero or more occurrences; of the type Asset) Define the underlying asset when it is a listed security.

### 1.9.3 Used by:

- Complex type: QuotedAssetSet

### 1.9.4 Derived Types:

### 1.9.5 Figure:

### 1.9.6 Schema Fragment:

```
<xsd:complexType name="InstrumentSet">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A collection of instruments usable for quotation purposes. In
      future releases, quotable derivative assets may be added after
      the underlying asset.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:sequence>
    <xsd:element ref="underlyingAsset" minOccurs="0" maxOccurs="unbounded">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          A collection of underlying assets (bonds, discount
          instruments, futures, etc.) that can be used as a basis for
          benchmark quotes.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
  </xsd:sequence>
</xsd:complexType>
```

## 1.10 Market

### 1.10.1 Description:

A collection of pricing inputs.

### 1.10.2 Contents:

**name** (zero or one occurrence; of the type xsd:string) The name of the market, e.g. the USDLIBOR market. Used for description and understandability.

**benchmarkQuotes** (zero or one occurrence; of the type QuotedAssetSet) A collection of benchmark instruments and quotes used as inputs to the pricing models.

**pricingStructure** (zero or more occurrences; of the type PricingStructure)

**pricingStructureValuation** (zero or more occurrences; of the type PricingStructureValuation)

**benchmarkPricingMethod** (zero or more occurrences; of the type PricingMethod) The pricing structure used to quote a benchmark instrument.

### 1.10.3 Used by:

- Element: market

### 1.10.4 Derived Types:

### 1.10.5 Figure:

### 1.10.6 Schema Fragment:

```
<xsd:complexType name="Market">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">

  </xsd:sequence>
</complexType>
```

```
    </xsd:element>
  </xsd:sequence>
  <xsd:attribute name="id" type="xsd:ID"/>
</xsd:complexType>
```

## 1.11 MarketReference

### 1.11.1 Description:

Reference to a market structure.

### 1.11.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type Reference)

- The abstract base class for all types which define intra-document pointers.

### 1.11.3 Used by:

- Complex type: DerivedValuationScenario
- Complex type: ValuationScenario

### 1.11.4 Derived Types:

### 1.11.5 Figure:

### 1.11.6 Schema Fragment:

```
<xsd:complexType name="MarketReference">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      Reference to a market structure.

  <xsd:complexContent>
    <xsd:extension base="Reference">
      <xsd:attribute name="href" type="xsd:IDREF" use="required" ecore:reference="Market"/>
    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

## 1.12 PerturbationType

### 1.12.1 Description:

The type of perturbation applied to compute a derivative perturbatively.

### 1.12.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type xsd:normalizedString)

•

### 1.12.3 Used by:

### 1.12.4 Derived Types:

### 1.12.5 Figure:

### 1.12.6 Schema Fragment:

```
<xsd:complexType name="PerturbationType">
  <xsd:annotation>
    <xsd:documentation source="http://www.FpML.org" xml:lang="en">
      The type of perturbation applied to compute a derivative
      perturbatively.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:simpleContent>
    <xsd:extension base="xsd:normalizedString">
      <xsd:attribute name="perturbationTypeScheme" type="xsd:anyURI" default="http://www.fpml.o
    </xsd:extension>
  </xsd:simpleContent>
</xsd:complexType>
```

## 1.13 PositionId

### 1.13.1 Description:

A unique identifier for the position. The id attribute is defined for intradocument referencing.

### 1.13.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type xsd:normalizedString)

### 1.13.3 Used by:

### 1.13.4 Derived Types:

### 1.13.5 Figure:

### 1.13.6 Schema Fragment:

```
<xsd:complexType name="PositionId">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A unique identifier for the position. The id attribute is defined
      for intradocument referencing.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:simpleContent>
    <xsd:extension base="xsd:normalizedString">
      <xsd:attribute name="positionIdScheme" type="xsd:anyURI" />
      <xsd:attribute name="id" type="xsd:ID" />
    </xsd:extension>
  </xsd:simpleContent>
</xsd:complexType>
```

## 1.14 PricingDataPointCoordinate

### 1.14.1 Description:

A set of index values that identify a pricing data point. For example: (strike = 17%, expiration = 6M, term = 1Y).

### 1.14.2 Contents:

Either

**term** (exactly one occurrence; of the type TimeDimension) A time dimension that represents the term of a financial instrument, e.g. of a zero-coupon bond on a curve, or of an underlying caplet or swap for an option.

Or

**expiration** (exactly one occurrence; of the type TimeDimension) A time dimension that represents the time to expiration of an option.

Or

**strike** (exactly one occurrence; of the type xsd:decimal) A numerical dimension that represents the strike rate or price of an option.

Or

**generic** (exactly one occurrence; of the type GenericDimension)

### 1.14.3 Used by:

### 1.14.4 Derived Types:

### 1.14.5 Figure:

### 1.14.6 Schema Fragment:

```
<xsd:complexType name="PricingDataPointCoordinate">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A set of index values that identify a pricing data point. For
      example: (strike = 17%, expiration = 6M, term = 1Y.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:sequence>
    <xsd:group ref="PricingStructureIndex.model" maxOccurs="unbounded"/>
  </xsd:sequence>
  <xsd:attribute name="id" type="xsd:ID"/>
</xsd:complexType>
```

## 1.15 PricingDataPointCoordinateReference

### 1.15.1 Description:

Reference to a Pricing Data Point Coordinate.

### 1.15.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type Reference)

- The abstract base class for all types which define intra-document pointers.

### 1.15.3 Used by:

### 1.15.4 Derived Types:

### 1.15.5 Figure:

### 1.15.6 Schema Fragment:

```
<xsd:complexType name="PricingDataPointCoordinateReference">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      Reference to a Pricing Data Point Coordinate.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:complexContent>
    <xsd:extension base="Reference">
      <xsd:attribute name="href" type="xsd:IDREF" use="required" ecore:reference="PricingDataP
    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

## 1.16 PricingInputReplacement

### 1.16.1 Description:

The substitution of a pricing input (e.g. curve) for another, used in generating prices and risks for valuation scenarios.

### 1.16.2 Contents:

**originalInputReference** (exactly one occurrence; of the type PricingStructureReference) A reference to the original value of the pricing input.

**replacementInputReference** (exactly one occurrence; of the type PricingStructureReference) A reference to the substitution to do.

### 1.16.3 Used by:

- Complex type: ValuationScenario

### 1.16.4 Derived Types:

### 1.16.5 Figure:

### 1.16.6 Schema Fragment:

```
<xsd:complexType name="PricingInputReplacement">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      The substitution of a pricing input (e.g. curve) for another,
      used in generating prices and risks for valuation scenarios.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:sequence>
    <xsd:element name="originalInputReference" type="PricingStructureReference">
      <xsd:annotation>

    </xsd:extension>
  </xsd:simpleContent>
</xsd:complexType>
```

## 1.18 PricingMethod

### 1.18.1 Description:

For an asset (e.g. a reference/benchmark asset), the pricing structure used to price it. Used, for example, to specify that the rateIndex "USD-LIBOR-Telerate" with term = 6M is priced using the "USD-LIBOR-Close" curve.

### 1.18.2 Contents:

**assetReference** (exactly one occurrence; of the type AnyAssetReference) The asset whose price is required.

**pricingInputReference** (exactly one occurrence; of the type PricingStructureReference) A reference to the pricing input used to value the asset.

### 1.18.3 Used by:

- Complex type: Market

### 1.18.4 Derived Types:

### 1.18.5 Figure:

### 1.18.6 Schema Fragment:

</xsd:complexType>
```

## 1.19 PricingParameterDerivative

### 1.19.1 Description:

A definition of the mathematical derivative with respect to a specific pricing parameter.

### 1.19.2 Contents:

**description** (zero or one occurrence; of the type xsd:string) A description, if needed, of how the derivative is computed.

Either

**parameterReference** (zero or one occurrence; of the type AssetOrTermPointOrPricingStructureReference) A reference to the pricing input parameter to which the sensitivity is computed. If it is omitted, the derivative definition is generic, and applies to any input point in the valuation set.

Or

**inputDateReference** (one or more occurrences; of the type ValuationReference) Reference(s) to the pricing input dates that are shifted when the sensitivity is computed. Depending on the time advance method used, this list could vary. Used for describing time-advance derivatives (theta, carry, etc.)

**calculationProcedure** (zero or one occurrence; of the type DerivativeCalculationProcedure) The method by which a derivative is computed, e.g. analytic, numerical model, perturbation, etc., and the corresponding parameters

### 1.19.3 Used by:

  </xsd:complexContent>
</xsd:complexType>
```

## 1.21 PricingParameterShift

### 1.21.1 Description:

A definition of a shift with respect to a specific pricing parameter.

### 1.21.2 Contents:

**parameterReference** (exactly one occurrence; of the type AssetOrTermPointOrPricingStructureReference)

**shift** (exactly one occurrence; of the type xsd:decimal) The size of the denominator, e.g. 0.0001 = 1 bp.

**shiftUnits** (zero or one occurrence; of the type PriceQuoteUnits) The units of the denominator, e.g. currency. If not present, use the units of the PricingInputReference.

### 1.21.3 Used by:

- Complex type: DerivedValuationScenario
- Complex type: ValuationScenario

### 1.21.4 Derived Types:

### 1.21.5 Figure:

### 1.21.6 Schema Fragment:

    </xsd:element>
  </xsd:sequence>
  <xsd:attribute name="id" type="xsd:ID"/>
</xsd:complexType>
```

## 1.22 PricingStructureValuation

### 1.22.1 Description:

An abstract pricing structure valuation base type. Used as a base for values of pricing structures such as yield curves and volatility matrices. Derived from the "Valuation" type.

### 1.22.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type Valuation)

- A valuation of an valuable object - an asset or a pricing input. This is an abstract type, used as a base for values of pricing structures such as yield curves as well as asset values.

**baseDate** (exactly one occurrence; of the type IdentifiedDate) The base date for which the structure applies, i.e. the curve date. Normally this will align with the valuation date.

**spotDate** (zero or one occurrence; of the type IdentifiedDate) The spot settlement date for which the structure applies, normally 0-2 days after the base date. The difference between the baseDate and the spotDate is termed the settlement lag, and is sometimes called "days to spot".

**inputDataDate** (zero or one occurrence; of the type IdentifiedDate) The date from which the input data used to construct the pricing input was obtained. Often the same as the baseDate, but sometimes the pricing input may be "rolled forward", in which input data from one date is used to generate a curve for a later date.

**endDate** (zero or one occurrence; of the type IdentifiedDate) The last date for which data is supplied in this pricing input.

**buildDateTime** (zero or one occurrence; of the type xsd:dateTime) The date and time when the pricing input was generated.

### 1.22.3 Used by:

- Element: pricingStructureValuation
- Complex type: CreditCurveValuation
- Complex type: DefaultProbabilityCurve
- Complex type: FxCurveValuation
- Complex type: VolatilityMatrix
- Complex type: YieldCurveValuation

### 1.22.4 Derived Types:

- Complex type: CreditCurveValuation
- Complex type: DefaultProbabilityCurve
- Complex type: FxCurveValuation
- Complex type: VolatilityMatrix
- Complex type: YieldCurveValuation

### 1.22.5 Figure:

### 1.22.6 Schema Fragment:

</xsd:annotation>
</xsd:group>
</xsd:sequence>
</xsd:extension>
</xsd:complexContent>
</xsd:complexType>
```

## 1.23 QuotedAssetSet

### 1.23.1 Description:

A collection of quoted assets.

### 1.23.2 Contents:

**instrumentSet** (zero or one occurrence; of the type InstrumentSet) A collection of instruments used as a basis for quotation.

**assetQuote** (zero or more occurrences; of the type BasicAssetValuation) A collection of valuations (quotes) for the assets needed in the set. Normally these quotes will be for the underlying assets listed above, but they don't necessarily have to be.

### 1.23.3 Used by:

- Complex type: FxRateSet
- Complex type: CreditCurveValuation
- Complex type: Market
- Complex type: YieldCurveValuation

### 1.23.4 Derived Types:

- Complex type: FxRateSet

### 1.23.5 Figure:

  </xsd:sequence>
</xsd:complexType>
```

## 1.24 SensitivityDefinition

### 1.24.1 Description:

A set of characteristics describing a sensitivity

### 1.24.2 Contents:

**name** (zero or one occurrence; of the type xsd:string) The name of the derivative, e.g. first derivative, Hessian, etc. Typically not required, but may be used to explain more complex derivative calculations.

**valuationScenarioReference** (zero or one occurrence; of the type ValuationScenarioReference) Reference to the valuation scenario to which this sensitivity definition applies. If the SensitivityDefinition occurs within a SensitivitySetDefinition, this is not required and normally not used. In this case, if it is supplied it overrides the valuationScenarioReference in the SensitivitySetDefinition.

### 1.24.3 Used by:

- Complex type: SensitivitySetDefinition

### 1.24.4 Derived Types:

### 1.24.5 Figure:

### 1.24.6 Schema Fragment:

</xsd:complexType>
```

## 1.25 SensitivitySetDefinition

### 1.25.1 Description:

A sensitivity report definition, consisting of a collection of sensitivity definitions.

### 1.25.2 Contents:

**name** (zero or one occurrence; of the type xsd:string) The name of the sensitivity set definition, e.g. "USDLIBOR curve sensitivities".

**sensitivityCharacteristics** (zero or one occurrence; of the type QuotationCharacteristics) The default characteristics of the quotation, e.g. type, units, etc.

**valuationScenarioReference** (zero or one occurrence; of the type ValuationScenarioReference) Reference to the valuation scenario to which this sensitivity definition applies, e.g. a reference to the EOD valuation scenario. If not supplied, this sensitivity set definition is generic to a variety of valuation scenarios.

**pricingInputType** (zero or one occurrence; of the type PricingInputType) The type of the pricing input to which the sensitivity is shown, e.g. a yield curve or volatility matrix.

**pricingInputReference** (zero or one occurrence; of the type PricingStructureReference) A reference to the pricing input to which the sensitivity is shown, e.g. a reference to a USDLIBOR yield curve.

**scale** (exactly one occurrence; of the type xsd:decimal) The size of the denominator, e.g. 0.0001 = 1 bp. For derivatives with respect to time, the default period is 1 day.

**sensitivityDefinition** (zero or more occurrences; of the type SensitivityDefinition) A set of sensitivity definitions. Either one per point reported, or one generic definition that applies to all points.

**calculationProcedure** (zero or one occurrence; of the type DerivativeCalculationProcedure) The method by which each derivative is computed, e.g. analytic, numerical model, perturbation, etc., and the corresponding parameters (eg. shift amounts).

## 1.27 Valuation

### 1.27.1 Description:

A valuation of an valuable object - an asset or a pricing input. This is an abstract type, used as a base for values of pricing structures such as yield curves as well as asset values.

### 1.27.2 Contents:

**objectReference** (zero or one occurrence; of the type AnyAssetReference) A reference to the asset or pricing structure that this values.

**valuationScenarioReference** (zero or one occurrence; of the type ValuationScenarioReference) A reference to the valuation scenario used to calculate this valuation. If the Valuation occurs within a ValuationSet, this value is optional and is defaulted from the ValuationSet. If this value occurs in both places, the lower level value (i.e. the one here) overrides that in the higher (i.e. ValuationSet).

### 1.27.3 Used by:

- Complex type: AssetValuation
- Complex type: BasicAssetValuation
- Complex type: PricingStructureValuation

### 1.27.4 Derived Types:

- Complex type: AssetValuation
- Complex type: BasicAssetValuation
- Complex type: PricingStructureValuation

### 1.27.5 Figure:

### 1.27.6 Schema Fragment:

## 1.28 ValuationReference

### 1.28.1 Description:

Reference to a Valuation or any derived structure such as PricingStructureValuation.

### 1.28.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type Reference)

- The abstract base class for all types which define intra-document pointers.

### 1.28.3 Used by:

- Complex type: PricingParameterDerivative

### 1.28.4 Derived Types:

### 1.28.5 Figure:

### 1.28.6 Schema Fragment:

```
<xsd:complexType name="ValuationReference">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      Reference to a Valuation or any derived structure such as
      PricingStructureValuation.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:complexContent>
    <xsd:extension base="Reference">
      <xsd:attribute name="href" type="xsd:IDREF" use="required" ecore:reference="Valuation"/>
    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

## 1.29 ValuationScenario

### 1.29.1 Description:

A set of rules for generating a valuation.

### 1.29.2 Contents:

**name** (zero or one occurrence; of the type xsd:string) The (optional) name for this valuation scenario, used for understandability. For example "EOD Valuations".

**valuationDate** (exactly one occurrence; of the type IdentifiedDate) The date for which the assets are valued.

**marketReference** (zero or one occurrence; of the type MarketReference) A reference to the market environment used to price the asset.

**shift** (zero or more occurrences; of the type PricingParameterShift) A collection of shifts to be applied to market inputs prior to computation of the derivative.

**replacement** (zero or more occurrences; of the type PricingInputReplacement) A collection of shifts to be applied to market inputs prior to computation of the derivative.

### 1.29.3 Used by:

- Complex type: ValuationSet

### 1.29.4 Derived Types:

### 1.29.5 Figure:

### 1.29.6 Schema Fragment:

```
<xsd:complexType name="ValuationScenario">

## 1.30 ValuationScenarioReference

### 1.30.1 Description:

Reference to a valuation scenario.

### 1.30.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type Reference)

- The abstract base class for all types which define intra-document pointers.

### 1.30.3 Used by:

- Complex type: DerivedValuationScenario
- Complex type: SensitivityDefinition
- Complex type: SensitivitySetDefinition
- Complex type: Valuation
- Complex type: ValuationSet

### 1.30.4 Derived Types:

### 1.30.5 Figure:

### 1.30.6 Schema Fragment:

    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

## 1.31 WeightedPartialDerivative

### 1.31.1 Description:

A partial derivative multiplied by a weighting factor.

### 1.31.2 Contents:

**partialDerivativeReference** (exactly one occurrence; of the type PricingStructureReference) A reference to a partial derivative defined in the ComputedDerivative.model, i.e. defined as part of this sensitivity definition.

**weight** (exactly one occurrence; of the type xsd:decimal) The weight factor to be applied to the partial derivative, e.g. 1 or -1, or some other scaling value.

### 1.31.3 Used by:

- Complex type: DenominatorTerm

### 1.31.4 Derived Types:

### 1.31.5 Figure:

### 1.31.6 Schema Fragment:

```
<xsd:complexType name="WeightedPartialDerivative">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A partial derivative multiplied by a weighting factor.

        <xsd:documentation xml:lang="en">
          The weight factor to be applied to the partial derivative,
          e.g. 1 or -1, or some other scaling value.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
  </xsd:sequence>
</xsd:complexType>
```

## ***2 Global Elements***

## 2.1 market

### 2.1.1 Description:

This is a global element used for creating global types. It holds Market information, e.g. curves, surfaces, quotes, etc.

### 2.1.2 Contents:

Element market is defined by the complex type Market

### 2.1.3 Used by:

- Complex type: RequestValuationReport
- Complex type: ValuationDocument
- Complex type: ValuationReport

### 2.1.4 Substituted by:

### 2.1.5 Figure:

### 2.1.6 Schema Fragment:

```
<xsd:element name="market" type="Market">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      This is a global element used for creating global types. It holds
      Market information, e.g. curves, surfaces, quotes, etc.
    </xsd:documentation>
  </xsd:annotation>
</xsd:element>
```

## **2.2 pricingStructure**

### **2.2.1 Description:**

### **2.2.2 Contents:**

Element pricingStructure is defined by the complex type PricingStructure

### **2.2.3 Used by:**

- Complex type: Market

### **2.2.4 Substituted by:**

- Element: creditCurve
- Element: fxCurve
- Element: volatilityRepresentation
- Element: yieldCurve

### **2.2.5 Figure:**

### **2.2.6 Schema Fragment:**

```
<xsd:element name="pricingStructure" type="PricingStructure" abstract="true"/>
```

## **2.3 pricingStructureValuation**

### **2.3.1 Description:**

### **2.3.2 Contents:**

Element pricingStructureValuation is defined by the complex type PricingStructureValuation

### **2.3.3 Used by:**

- Complex type: Market

### **2.3.4 Substituted by:**

- Element: creditCurveValuation
- Element: fxCurveValuation
- Element: volatilityMatrixValuation
- Element: yieldCurveValuation

### **2.3.5 Figure:**

### **2.3.6 Schema Fragment:**

```
<xsd:element name="pricingStructureValuation" type="PricingStructureValuation" abstract="true"/>
```

## **3 Groups**

## 3.1 AnalyticDerivativeParameters.model

### 3.1.1 Description:

Parameters used in the computation of a derivative using analytical (closed form formula) techniques.

### 3.1.2 Contents:

**derivativeFormula** (zero or one occurrence; of the type xsd:string) The formula used to compute the derivative (perhaps could be updated to use the Formula type in EQS.).

### 3.1.3 Used by:

### 3.1.4 Figure:

### 3.1.5 Schema Fragment:

```
<xsd:group name="AnalyticDerivativeParameters.model">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      Parameters used in the computation of a derivative using
      analytical (closed form formula) techniques.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:sequence>
    <xsd:element name="derivativeFormula" type="xsd:string" minOccurs="0">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          The formula used to compute the derivative (perhaps could be
          updated to use the Formula type in EQS.).
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
  </xsd:sequence>
</xsd:group>
```

## 3.2 ComputedDerivative.model

### 3.2.1 Description:

A group describing a derivative as combination of partial derivatives.

### 3.2.2 Contents:

**partialDerivative** (one or more occurrences; of the type PricingParameterDerivative) A partial derivative of the measure with respect to an input.

**formula** (zero or one occurrence; of the type DerivativeFormula) A formula defining how to compute the derivative from the partial derivatives. If absent, the derivative is just the product of the partial derivatives. Normally only required for more higher-order derivatives, e.g. Hessians.

### 3.2.3 Used by:

- Complex type: SensitivityDefinition

### 3.2.4 Figure:

### 3.2.5 Schema Fragment:

```
<xsd:group name="ComputedDerivative.model">

          partial derivatives. If absent, the derivative is just the
          product of the partial derivatives. Normally only required
          for more higher-order derivatives, e.g. Hessians.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
  </xsd:sequence>
</xsd:group>
```

## 3.3 DerivativeCalculationParameters.model

### 3.3.1 Description:

Parameters used in the computation of a derivative.

### 3.3.2 Contents:

### 3.3.3 Used by:

- Complex type: DerivativeCalculationProcedure

### 3.3.4 Figure:

### 3.3.5 Schema Fragment:

```
<xsd:group name="DerivativeCalculationParameters.model">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      Parameters used in the computation of a derivative.

    <xsd:group ref="AnalyticDerivativeParameters.model"/>
    <xsd:group ref="SubstitutionDerivativeParameters.model"/>
  </xsd:choice>
</xsd:group>
```

## 3.4 FiniteDifferenceDerivativeParameters.model

### 3.4.1 Description:

Parameters used in the computation of a derivative using numerical (finite difference) techniques.

### 3.4.2 Contents:

**perturbationAmount** (zero or one occurrence; of the type xsd:decimal) The size and direction of the perturbation used to compute the derivative, e.g. 0.0001 = 1 bp.

**averaged** (exactly one occurrence; of the type xsd:boolean) The value is calculated by perturbing by the perturbationAmount and then the negative of the perturbationAmount and then averaging the two values (i.e. the value is half of the difference between perturbing up and perturbing down).

**perturbationType** (zero or one occurrence; of the type PerturbationType) The type of perturbation, if any, used to compute the derivative (Absolute vs Relative).

### 3.4.3 Used by:

### 3.4.4 Figure:

### 3.4.5 Schema Fragment:

```
<xsd:group name="FiniteDifferenceDerivativeParameters.model">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      Parameters used in the computation of a derivative using
      numerical (finite difference) techniques.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:sequence>
    <xsd:element name="perturbationAmount" type="xsd:decimal" minOccurs="0">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">

          the derivative, e.g. 0.0001 = 1 bp.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
    <xsd:element name="averaged" type="xsd:boolean">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          The value is calculated by perturbing by the
          perturbationAmount and then the negative of the
          perturbationAmount and then averaging the two values (i.e.
          the value is half of the difference between perturbing up and
          perturbing down).
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
    <xsd:element name="perturbationType" type="PerturbationType" minOccurs="0">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          The type of perturbation, if any, used to compute the
          derivative (Absolute vs Relative).
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
  </xsd:sequence>
</xsd:group>
```

## 3.5 PositionIdAndVersion.model

### 3.5.1 Description:

A model group that includes a position ID and an optional version.

### 3.5.2 Contents:

**positionId** (exactly one occurrence; of the type PositionId) A version-independent identifier for the position, possibly based on trade identifier.

**version** (zero or one occurrence; of the type xsd:positiveInteger) A version identifier. Version identifiers must be ascending, i.e. higher numbers imply newer versions. There is no requirement that version identifiers for a position be sequential or small, so for example timestamp-based version identifiers could be used.

### 3.5.3 Used by:

- Complex type: AssertedPosition
- Complex type: Position
- Complex type: PositionProposedMatch
- Complex type: PositionReference
- Complex type: RequestedPositions
- Complex type: UnprocessedPosition

### 3.5.4 Figure:

### 3.5.5 Schema Fragment:

        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
    <xsd:element name="version" type="xsd:positiveInteger" minOccurs="0">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          A version identifier. Version identifiers must be ascending,
          i.e. higher numbers imply newer versions. There is no
          requirement that version identifiers for a position be
          sequential or small, so for example timestamp-based version
          identifiers could be used.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
  </xsd:sequence>
</xsd:group>
```

## 3.6 PricingCoordinateOrReference.model

### 3.6.1 Description:

A pricing structure coordinate, or a reference to one. This can be used to either directly define a coordinate or reference an existing coordinate.

### 3.6.2 Contents:

Either

**coordinate** (exactly one occurrence; of the type PricingDataPointCoordinate) An explicit, filled in data point coordinate. This might specify expiration, strike, etc.

Or

**coordinateReference** (exactly one occurrence; of the type PricingDataPointCoordinateReference) A reference to a pricing data point coordinate within this document.

### 3.6.3 Used by:

- Complex type: PricingStructurePoint

### 3.6.4 Figure:

### 3.6.5 Schema Fragment:

```
<xsd:group name="PricingCoordinateOrReference.model">

      </xsd:annotation>
    </xsd:element>
  </xsd:choice>
</xsd:group>
```

## 3.7 PricingInputDates.model

### 3.7.1 Description:

The dates that might be relevant for a pricing input, e.g. what valuation date it applies to, when it was built, when the data comes from, etc..

### 3.7.2 Contents:

**baseDate** (exactly one occurrence; of the type IdentifiedDate) The base date for which the structure applies, i.e. the curve date. Normally this will align with the valuation date.

**spotDate** (zero or one occurrence; of the type IdentifiedDate) The spot settlement date for which the structure applies, normally 0-2 days after the base date. The difference between the baseDate and the spotDate is termed the settlement lag, and is sometimes called "days to spot".

**inputDataDate** (zero or one occurrence; of the type IdentifiedDate) The date from which the input data used to construct the pricing input was obtained. Often the same as the baseDate, but sometimes the pricing input may be "rolled forward", in which input data from one date is used to generate a curve for a later date.

**endDate** (zero or one occurrence; of the type IdentifiedDate) The last date for which data is supplied in this pricing input.

**buildDateTime** (zero or one occurrence; of the type xsd:dateTime) The date and time when the pricing input was generated.

### 3.7.3 Used by:

- Complex type: PricingStructureValuation

### 3.7.4 Figure:

### 3.7.5 Schema Fragment:

    </xsd:annotation>  
</xsd:element>  
</xsd:sequence>  
</xsd:group>
```

## 3.8 PricingStructureIndex.model

### 3.8.1 Description:

The index (an ordinate) of a pricing structure. The index expresses how far along a particular dimension (e.g. time, strike, etc.) a point is located.

### 3.8.2 Contents:

Either

**term** (exactly one occurrence; of the type TimeDimension) A time dimension that represents the term of a financial instrument, e.g. of a zero-coupon bond on a curve, or of an underlying caplet or swap for an option.

Or

**expiration** (exactly one occurrence; of the type TimeDimension) A time dimension that represents the time to expiration of an option.

Or

**strike** (exactly one occurrence; of the type xsd:decimal) A numerical dimension that represents the strike rate or price of an option.

Or

**generic** (exactly one occurrence; of the type GenericDimension)

### 3.8.3 Used by:

- Complex type: PricingDataPointCoordinate

### 3.8.4 Figure:

### 3.8.5 Schema Fragment:

```

## ***1 Global Simple Types***

## 1.1 CorrelationValue

### 1.1.1 Description:

A type defining a number specified as a decimal between -1 and 1 inclusive.

### 1.1.2 Contents:

Inherited element(s): (This definition restricts the content defined by the type xsd:decimal)

### 1.1.3 Used by:

### 1.1.4 Derived Types:

### 1.1.5 Schema Fragment:

```
<xsd:simpleType name="CorrelationValue">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A type defining a number specified as a decimal between -1 and 1
      inclusive.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:restriction base="xsd:decimal">
    <xsd:minInclusive value="-1"/>
    <xsd:maxInclusive value="1"/>
  </xsd:restriction>
</xsd:simpleType>
```

## 1.2 HourMinuteTime

### 1.2.1 Description:

A type defining a time specified in hh:mm:ss format where the second component must be '00', e.g. 11am would be represented as 11:00:00.

### 1.2.2 Contents:

Inherited element(s): (This definition restricts the content defined by the type xsd:time)

### 1.2.3 Used by:

### 1.2.4 Derived Types:

### 1.2.5 Schema Fragment:

```
<xsd:simpleType name="HourMinuteTime">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A type defining a time specified in hh:mm:ss format where the
      second component must be '00', e.g. 11am would be represented as
      11:00:00.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:restriction base="xsd:time">
    <xsd:pattern value="[0-2][0-9]:[0-5][0-9]:00"/>
  </xsd:restriction>
</xsd:simpleType>
```

## 1.3 NonNegativeDecimal

### 1.3.1 Description:

A type defining a number specified as non negative decimal greater than 0 inclusive.

### 1.3.2 Contents:

Inherited element(s): (This definition restricts the content defined by the type xsd:decimal)

### 1.3.3 Used by:

### 1.3.4 Derived Types:

### 1.3.5 Schema Fragment:

```
<xsd:simpleType name="NonNegativeDecimal">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A type defining a number specified as non negative decimal
      greater than 0 inclusive.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:restriction base="xsd:decimal">
    <xsd:minInclusive value="0"/>
  </xsd:restriction>
</xsd:simpleType>
```

## 1.4 PositiveDecimal

### 1.4.1 Description:

A type defining a number specified as positive decimal greater than 0 exclusive.

### 1.4.2 Contents:

Inherited element(s): (This definition restricts the content defined by the type xsd:decimal)

### 1.4.3 Used by:

### 1.4.4 Derived Types:

### 1.4.5 Schema Fragment:

```
<xsd:simpleType name="PositiveDecimal">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A type defining a number specified as positive decimal greater
      than 0 exclusive.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:restriction base="xsd:decimal">
    <xsd:minExclusive value="0"/>
  </xsd:restriction>
</xsd:simpleType>
```

## 1.5 RestrictedPercentage

### 1.5.1 Description:

A type defining a percentage specified as decimal from 0 to 1. A percentage of 5% would be represented as 0.05.

### 1.5.2 Contents:

Inherited element(s): (This definition restricts the content defined by the type xsd:decimal)

### 1.5.3 Used by:

### 1.5.4 Derived Types:

### 1.5.5 Schema Fragment:

```
<xsd:simpleType name="RestrictedPercentage">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A type defining a percentage specified as decimal from 0 to 1. A
      percentage of 5% would be represented as 0.05.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:restriction base="xsd:decimal">
    <xsd:minInclusive value="0"/>
    <xsd:maxInclusive value="1"/>
  </xsd:restriction>
</xsd:simpleType>
```

## ***2 Global Complex Types***

## 2.1 Account

### 2.1.1 Description:

A generic account that represents any party's account at another party. Parties may be identified by the account at another party.

### 2.1.2 Contents:

**accountBeneficiary** (zero or one occurrence; of the type PartyReference) A reference to the party beneficiary of the account.

### 2.1.3 Used by:

- Complex type: Party

### 2.1.4 Derived Types:

### 2.1.5 Figure:

### 2.1.6 Schema Fragment:

```
<xsd:complexType name="Account">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A generic account that represents any party's account at another
      party. Parties may be identified by the account at another party.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:sequence>
    <xsd:element maxOccurs="unbounded">
      <xsd:element name="accountId" type="AccountId">
        <xsd:annotation>
          <xsd:documentation xml:lang="en">
            An account identifier. For example an Account number.
          </xsd:documentation>
        </xsd:annotation>
      </xsd:element>
      <xsd:element name="accountName" type="xsd:normalizedString" minOccurs="0">
        <xsd:annotation>
          <xsd:documentation xml:lang="en">
            The name by which the account is known.
          </xsd:documentation>
        </xsd:annotation>
      </xsd:element>
    </xsd:sequence>
    <xsd:element name="accountBeneficiary" type="PartyReference" minOccurs="0">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          A reference to the party beneficiary of the account.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
  </xsd:sequence>
  <xsd:attribute name="id" type="xsd:ID" use="required">
    <xsd:annotation>
      <xsd:documentation xml:lang="en">
        The unique identifier for the account within the document.
      </xsd:documentation>
    </xsd:annotation>
  </xsd:attribute>
</xsd:complexType>
```

## 2.2 AccountId

### 2.2.1 Description:

The data type used for party identifiers.

### 2.2.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type xsd:normalizedString)

•

### 2.2.3 Used by:

- Complex type: Account

### 2.2.4 Derived Types:

### 2.2.5 Figure:

### 2.2.6 Schema Fragment:

```
<xsd:complexType name="AccountId">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      The data type used for party identifiers.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:simpleContent>
    <xsd:extension base="xsd:normalizedString">
      <xsd:attribute name="accountIdScheme" type="xsd:anyURI">
        <xsd:annotation>
          <xsd:documentation xml:lang="en">
            The identifier scheme used with this accountId. A unique
            URI to determine the authoritative issuer of these
            identifiers.
          </xsd:documentation>
        </xsd:annotation>
      </xsd:attribute>
    </xsd:extension>
  </xsd:simpleContent>
</xsd:complexType>
```

## 2.3 AccountReference

### 2.3.1 Description:

Reference to an account.

### 2.3.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type Reference)

- The abstract base class for all types which define intra-document pointers.

### 2.3.3 Used by:

- Complex type: PartyRole

### 2.3.4 Derived Types:

### 2.3.5 Figure:

### 2.3.6 Schema Fragment:

```
<xsd:complexType name="AccountReference">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      Reference to an account.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:complexContent>
    <xsd:extension base="Reference">
      <xsd:attribute name="href" type="xsd:IDREF" use="required" ecore:reference="Account" />
    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

## 2.4 Address

### 2.4.1 Description:

A type that represents a physical postal address.

### 2.4.2 Contents:

**streetAddress** (zero or one occurrence; of the type StreetAddress) The set of street and building number information that identifies a postal address within a city.

**city** (zero or one occurrence; of the type xsd:string) The city component of a postal address.

**state** (zero or one occurrence; of the type xsd:string) A country subdivision used in postal addresses in some countries. For example, US states, Canadian provinces, Swiss cantons.

**country** (zero or one occurrence; of the type Country) The ISO 3166 standard code for the country within which the postal address is located.

**postalCode** (zero or one occurrence; of the type xsd:string) The code, required for computerised mail sorting systems, that is allocated to a physical address by a national postal authority.

### 2.4.3 Used by:

### 2.4.4 Derived Types:

### 2.4.5 Figure:

### 2.4.6 Schema Fragment:

```
<xsd:complexType name="Address">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A type that represents a physical postal address.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:sequence>
    <xsd:element name="streetAddress" type="StreetAddress" minOccurs="0">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          The set of street and building number information that
          identifies a postal address within a city.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
    <xsd:element name="city" type="xsd:string" minOccurs="0">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          The city component of a postal address.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
    <xsd:element name="state" type="xsd:string" minOccurs="0">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          A country subdivision used in postal addresses in some
          countries. For example, US states, Canadian provinces, Swiss
          cantons.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
    <xsd:element name="country" type="Country" minOccurs="0">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          The ISO 3166 standard code for the country within which the
          postal address is located.

          The code, required for computerised mail sorting systems,
          that is allocated to a physical address by a national postal
          authority.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
  </xsd:sequence>
</xsd:complexType>
```

```
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
  </xsd:sequence>
</xsd:complexType>
```

## 2.5 AdjustableDate

### 2.5.1 Description:

A type for defining a date that shall be subject to adjustment if it would otherwise fall on a day that is not a business day in the specified business centers, together with the convention for adjusting the date.

### 2.5.2 Contents:

**unadjustedDate** (exactly one occurrence; of the type IdentifiedDate) A date subject to adjustment.

**dateAdjustments** (exactly one occurrence; of the type BusinessDayAdjustments) The business day convention and financial business centers used for adjusting the date if it would otherwise fall on a day that is not a business date in the specified business centers.

### 2.5.3 Used by:

- Complex type: AdjustableDateOrRelativeDateSequence
- Complex type: AdjustableOrRelativeDate
- Complex type: CalculationPeriodDates
- Complex type: DividendPaymentDate
- Complex type: EquityOptionTermination
- Complex type: EquityPremium
- Complex type: Fra
- Complex type: MandatoryEarlyTermination
- Complex type: Payment
- Complex type: PrePayment
- Complex type: QuotablePayment
- Complex type: StartingDate

### 2.5.4 Derived Types:

### 2.5.5 Figure:

### 2.5.6 Schema Fragment:

```
<xsd:complexType name="AdjustableDate">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A type for defining a date that shall be subject to adjustment if
      it would otherwise fall on a day that is not a business day in

    <xsd:element name="dateAdjustments" type="BusinessDayAdjustments">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          The business day convention and financial business centers
          used for adjusting the date if it would otherwise fall on a
          day that is not a business date in the specified business
          centers.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
  </xsd:sequence>
  <xsd:attribute name="id" type="xsd:ID"/>
</xsd:complexType>
```

## 2.6 AdjustableDate2

### 2.6.1 Description:

A type that is different from AdjustableDate in two regards. First, date adjustments can be specified with either a dateAdjustments element or a reference to an existing dateAdjustments element. Second, it does not require the specification of date adjustments.

### 2.6.2 Contents:

**unadjustedDate** (exactly one occurrence; of the type IdentifiedDate) A date subject to adjustment.

Either

**dateAdjustments** (exactly one occurrence; of the type BusinessDayAdjustments) The business day convention and financial business centers used for adjusting the date if it would otherwise fall on a day that is not a business dat in the specified business centers.

Or

**dateAdjustmentsReference** (exactly one occurrence; of the type BusinessDayAdjustmentsReference) A pointer style reference to date adjustments defined elsewhere in the document.

### 2.6.3 Used by:

- Complex type: DeprecatedScheduledTerminationDate
- Complex type: GeneralTerms
- Complex type: PaymentDetail
- Complex type: ScheduledTerminationDate
- Complex type: TradeDetails

### 2.6.4 Derived Types:

### 2.6.5 Figure:

### 2.6.6 Schema Fragment:

```
<xsd:complexType name="AdjustableDate2">

          used for adjusting the date if it would otherwise fall on a
          day that is not a business dat in the specified business
          centers.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
  </xsd:sequence>
</xsd:complexType>
```

## 2.8 AdjustableDatesOrRelativeDateOffset

### 2.8.1 Description:

A type for defining a series of dates, either as a list of adjustable dates, or a as a repeating sequence from a base date

### 2.8.2 Contents:

Either

**adjustableDates** (exactly one occurrence; of the type AdjustableDates) A series of adjustable dates

Or

**relativeDate** (exactly one occurrence; of the type RelativeDateOffset) A series of dates specified as a repeating sequence from a base date

### 2.8.3 Used by:

- Complex type: InterestLegResetDates

### 2.8.4 Derived Types:

### 2.8.5 Figure:

### 2.8.6 Schema Fragment:

```
<xsd:complexType name="AdjustableDatesOrRelativeDateOffset">

    </xsd:element>
  </xsd:choice>
</xsd:complexType>
```

## 2.9 AdjustableOrRelativeAndAdjustedDate

### 2.9.1 Description:

An adjustable or relative date with the option to provide the adjusted date.

### 2.9.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type AdjustableOrRelativeDate)

- A type giving the choice between defining a date as an explicit date together with applicable adjustments or as relative to some other (anchor) date.

**adjustedDate** (zero or one occurrence; of the type IdentifiedDate) The adjusted date. This date should already be adjusted for any applicable business day convention. This component is not intended for use in trade confirmation but may be specified to allow the fee structure to also serve as a cashflow type component (all dates the the Cashflows type are adjusted payment dates).

### 2.9.3 Used by:

- Complex type: SimplePayment

### 2.9.4 Derived Types:

### 2.9.5 Figure:

### 2.9.6 Schema Fragment:

## 2.13 AdjustedRelativeDateOffset

### 2.13.1 Description:

A type defining a date (referred to as the derived date) as a relative offset from another date (referred to as the anchor date) plus optional date adjustments.

### 2.13.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type RelativeDateOffset)

- A type defining a date (referred to as the derived date) as a relative offset from another date (referred to as the anchor date). If the anchor date is itself an adjustable date then the offset is assumed to be calculated from the adjusted anchor date. A number of different scenarios can be supported, namely; 1) the derived date may simply be a number of calendar periods (days, weeks, months or years) preceding or following the anchor date; 2) the unadjusted derived date may be a number of calendar periods(days, weeks, months or years) preceding or following the anchor date with the resulting unadjusted derived date subject to adjustment in accordance with a specified business day convention, i.e. the derived date must fall on a good business day; 3) the derived date may be a number of business days preceding or following the anchor date. Note that the businessDayConvention specifies any required adjustment to the unadjusted derived date. A negative or positive value in the periodMultiplier indicates whether the unadjusted derived precedes or follows the anchor date. The businessDayConvention should contain a value NONE if the day type element contains a value of Business (since specifying a negative or positive business days offset would already guarantee that the derived date would fall on a good business day in the specified business centers).

**relativeDateAdjustments** (zero or one occurrence; of the type BusinessDayAdjustments) The business day convention and financial business centers used for adjusting the relative date if it would otherwise fall on a day that is not a business date in the specified business centers.

### 2.13.3 Used by:

## 2.14 AmericanExercise

### 2.14.1 Description:

A type defining the exercise period for an American style option together with any rules governing the notional amount of the underlying which can be exercised on any given exercise date and any associated exercise fees.

### 2.14.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type Exercise)

- The abstract base class for all types which define way in which options may be exercised.

**commencementDate** (exactly one occurrence; of the type AdjustableOrRelativeDate) The first day of the exercise period for an American style option.

**expirationDate** (exactly one occurrence; of the type AdjustableOrRelativeDate) The last day within an exercise period for an American style option. For a European style option it is the only day within the exercise period.

**relevantUnderlyingDate** (zero or one occurrence; of the type AdjustableOrRelativeDates) The day on the underlying set by the exercise of an option. What this date is depends on the option (e.g. in a swaption it is the effective date, in an extendible/cancelable provision it is the termination date).

**earliestExerciseTime** (exactly one occurrence; of the type BusinessCenterTime) The earliest time at which notice of exercise can be given by the buyer to the seller (or seller's agent) i) on the expiration date, in the case of a European style option, (ii) on each bermuda option exercise date and the expiration date, in the case of a Bermuda style option the commencement date to, and including, the expiration date, in the case of an American option.

**latestExerciseTime** (zero or one occurrence; of the type BusinessCenterTime) For a Bermuda or American style option, the latest time on an exercise business day (excluding the expiration date) within the exercise period that notice can be given by the buyer to the seller or seller's agent. Notice of exercise given after this time will be deemed to have been given on the next exercise business day.

**expirationTime** (exactly one occurrence; of the type BusinessCenterTime) The latest time for exercise on expirationDate.

**multipleExercise** (zero or one occurrence; of the type MultipleExercise) As defined in the 2000 ISDA Definitions, Section 12.4. Multiple Exercise, the buyer of the option has the right to exercise all or less than all the unexercised notional amount of the underlying swap on one or more days in the exercise period, but on any such day may not exercise less than the minimum notional amount or more than the maximum notional amount, and if an integral multiple amount is specified, the notional amount exercised must be equal to, or be an integral multiple of, the integral multiple amount.

**exerciseFeeSchedule** (zero or one occurrence; of the type ExerciseFeeSchedule) The fees associated with an exercise date. The fees are conditional on the exercise occurring. The fees can be specified as actual currency amounts or as percentages of the notional amount being exercised.

  </xsd:complexContent>
</xsd:complexType>
```

## 2.16 AmountSchedule

### 2.16.1 Description:

A type defining a currency amount or a currency amount schedule.

### 2.16.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type Schedule)

- A type defining a schedule of rates or amounts in terms of an initial value and then a series of step date and value pairs. On each step date the rate or amount changes to the new step value. The series of step date and value pairs are optional. If not specified, this implies that the initial value remains unchanged over time.

**currency** (exactly one occurrence; of the type Currency) The currency in which an amount is denominated.

### 2.16.3 Used by:

- Complex type: CalculationPeriodAmount
- Complex type: ExerciseFeeSchedule
- Complex type: Notional

### 2.16.4 Derived Types:

### 2.16.5 Figure:

### 2.16.6 Schema Fragment:

      </xsd:sequence>
    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

## 2.17 AutomaticExercise

### 2.17.1 Description:

A type to define automatic exercise of a swaption. With automatic exercise the option is deemed to have exercised if it is in the money by more than the threshold amount on the exercise date.

### 2.17.2 Contents:

**thresholdRate** (exactly one occurrence; of the type xsd:decimal) A threshold rate. The threshold of 0.10% would be represented as 0.001

### 2.17.3 Used by:

- Complex type: ExerciseProcedure

### 2.17.4 Derived Types:

### 2.17.5 Figure:

### 2.17.6 Schema Fragment:

## 2.18 Beneficiary

### 2.18.1 Description:

A type defining the beneficiary of the funds.

### 2.18.2 Contents:

Either

**routingIds** (exactly one occurrence; of the type RoutingIds) A set of unique identifiers for a party, each one identifying the party within a payment system. The assumption is that each party will not have more than one identifier within the same payment system.

Or

**routingExplicitDetails** (exactly one occurrence; of the type RoutingExplicitDetails) A set of details that is used to identify a party involved in the routing of a payment when the party does not have a code that identifies it within one of the recognized payment systems.

Or

**routingIdsAndExplicitDetails** (exactly one occurrence; of the type RoutingIdsAndExplicitDetails) A combination of coded payment system identifiers and details for physical addressing for a party involved in the routing of a payment.

**beneficiaryPartyReference** (zero or one occurrence; of the type PartyReference) Link to the party acting as beneficiary. This element can only appear within the beneficiary container element.

### 2.18.3 Used by:

- Complex type: SettlementInstruction

### 2.18.4 Derived Types:

      </xsd:annotation>
    </xsd:element>
  </xsd:sequence>
</xsd:complexType>
```

## 2.19 BermudaExercise

### 2.19.1 Description:

A type defining the Bermuda option exercise dates and the expiration date together with any rules governing the notional amount of the underlying which can be exercised on any given exercise date and any associated exercise fee.

### 2.19.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type Exercise)

- The abstract base class for all types which define way in which options may be exercised.

**bermudaExerciseDates** (exactly one occurrence; of the type AdjustableOrRelativeDates) The dates the define the Bermuda option exercise dates and the expiration date. The last specified date is assumed to be the expiration date. The dates can either be specified as a series of explicit dates and associated adjustments or as a series of dates defined relative to another schedule of dates, for example, the calculation period start dates. Where a relative series of dates are defined the first and last possible exercise dates can be separately specified.

**relevantUnderlyingDate** (zero or one occurrence; of the type AdjustableOrRelativeDates) The day on the underlying set by the exercise of an option. What this date is depends on the option (e.g. in a swaption it is the effective date, in an extendible/cancelable provision it is the termination date).

**earliestExerciseTime** (exactly one occurrence; of the type BusinessCenterTime) The earliest time at which notice of exercise can be given by the buyer to the seller (or seller's agent) i) on the expiration date, in the case of a European style option, (ii) on each bermuda option exercise date and the expiration date, in the case of a Bermuda style option the commencement date to, and including, the expiration date, in the case of an American option.

**latestExerciseTime** (zero or one occurrence; of the type BusinessCenterTime) For a Bermuda or American style option, the latest time on an exercise business day (excluding the expiration date) within the exercise period that notice can be given by the buyer to the seller or seller's agent. Notice of exercise given after this time will be deemed to have been given on the next exercise business day.

**expirationTime** (exactly one occurrence; of the type BusinessCenterTime) The latest time for exercise on expirationDate.

**multipleExercise** (zero or one occurrence; of the type MultipleExercise) As defined in the 2000 ISDA Definitions, Section 12.4. Multiple Exercise, the buyer of the option has the right to exercise all or less than all the unexercised notional amount of the underlying swap on one or more days in the exercise period, but on any such day may not exercise less than the minimum notional amount or more than the maximum notional amount, and if an integral multiple amount is specified, the notional amount exercised must be equal to, or be an integral multiple of, the integral multiple amount.

**exerciseFeeSchedule** (zero or one occurrence; of the type ExerciseFeeSchedule) The fees associated with an exercise date. The fees are conditional on the exercise occurring. The fees can be specified as actual currency amounts or as percentages of the notional amount being exercised.

</xsd:complexContent>  
</xsd:complexType>
```

## 2.20 BrokerConfirmation

### 2.20.1 Description:

Identifies the market sector in which the trade has been arranged.

### 2.20.2 Contents:

**brokerConfirmationType** (exactly one occurrence; of the type BrokerConfirmationType) The type of broker confirmation executed between the parties.

### 2.20.3 Used by:

- Complex type: Documentation

### 2.20.4 Derived Types:

### 2.20.5 Figure:

### 2.20.6 Schema Fragment:

```
<xsd:complexType name="BrokerConfirmation">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      Identifies the market sector in which the trade has been
      arranged.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:sequence>
    <xsd:element name="brokerConfirmationType" type="BrokerConfirmationType">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          The type of broker confirmation executed between the parties.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
  </xsd:sequence>
</xsd:complexType>
```

## 2.21 BrokerConfirmationType

### 2.21.1 Description:

Identifies the market sector in which the trade has been arranged.

### 2.21.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type xsd:normalizedString)

•

### 2.21.3 Used by:

- Complex type: BrokerConfirmation

### 2.21.4 Derived Types:

### 2.21.5 Figure:

### 2.21.6 Schema Fragment:

```
<xsd:complexType name="BrokerConfirmationType">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      Identifies the market sector in which the trade has been
      arranged.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:simpleContent>
    <xsd:extension base="xsd:normalizedString">
      <xsd:attribute name="brokerConfirmationTypeScheme" type="xsd:anyURI" default="http://www
    </xsd:extension>
  </xsd:simpleContent>
</xsd:complexType>
```

## 2.22 BusinessCenter

### 2.22.1 Description:

A code identifying a financial business center location. A business center is drawn from the list identified by the business center scheme.

### 2.22.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type xsd:normalizedString)

•

### 2.22.3 Used by:

- Complex type: BusinessCenters
- Complex type: BusinessCenterTime
- Complex type: CreditEventNotice
- Complex type: ExerciseNotice

### 2.22.4 Derived Types:

### 2.22.5 Figure:

### 2.22.6 Schema Fragment:

```
<xsd:complexType name="BusinessCenter">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A code identifying a financial business center location. A
      business center is drawn from the list identified by the business
      center scheme.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:simpleContent>
    <xsd:extension base="xsd:normalizedString">
      <xsd:attribute name="businessCenterScheme" type="xsd:anyURI" default="http://www.fpml.org" />
      <xsd:attribute name="id" type="xsd:ID"/>
    </xsd:extension>
  </xsd:simpleContent>
</xsd:complexType>
```

## 2.23 BusinessCenters

### 2.23.1 Description:

A type for defining financial business centers used in determining whether a day is a business day or not. A list of business centers may be ordered in the document alphabetically based on business center code. An FpML document containing an unordered business center list is still regarded as a conformant document.

### 2.23.2 Contents:

**businessCenter** (one or more occurrences; of the type BusinessCenter)

### 2.23.3 Used by:

### 2.23.4 Derived Types:

### 2.23.5 Figure:

### 2.23.6 Schema Fragment:

```
<xsd:complexType name="BusinessCenters">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A type for defining financial business centers used in
      determining whether a day is a business day or not. A list of
      business centers may be ordered in the document alphabetically
      based on business center code. An FpML document containing an
      unordered business center list is still regarded as a conformant
      document.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:sequence>
    <xsd:element name="businessCenter" type="BusinessCenter" maxOccurs="unbounded"/>
  </xsd:sequence>
  <xsd:attribute name="id" type="xsd:ID"/>
</xsd:complexType>
```

## 2.24 BusinessCentersReference

### 2.24.1 Description:

A pointer style reference to a set of financial business centers defined elsewhere in the document.

### 2.24.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type Reference)

- The abstract base class for all types which define intra-document pointers.

### 2.24.3 Used by:

### 2.24.4 Derived Types:

### 2.24.5 Figure:

### 2.24.6 Schema Fragment:

```
<xsd:complexType name="BusinessCentersReference">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A pointer style reference to a set of financial business centers
      defined elsewhere in the document.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:complexContent>
    <xsd:extension base="Reference">
      <xsd:attribute name="href" type="xsd:IDREF" use="required" ecore:reference="BusinessCentersReference"/>
    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

## 2.25 BusinessCenterTime

### 2.25.1 Description:

A type for defining a time with respect to a business center location. For example, 11:00am London time.

### 2.25.2 Contents:

**hourMinuteTime** (exactly one occurrence; of the type HourMinuteTime) A time specified in hh:mm:ss format where the second component must be '00', e.g. 11am would be represented as 11:00:00.

**businessCenter** (exactly one occurrence; of the type BusinessCenter)

### 2.25.3 Used by:

- Complex type: AmericanExercise
- Complex type: BermudaExercise
- Complex type: CashSettlement
- Complex type: CashSettlementTerms
- Complex type: EquityAmericanExercise
- Complex type: EquityBermudaExercise
- Complex type: EquityEuropeanExercise
- Complex type: EquityValuation
- Complex type: EuropeanExercise
- Complex type: ExpiryDateTime
- Complex type: FxAverageRateOption
- Complex type: FxSpotRateSource
- Complex type: SharedAmericanExercise

### 2.25.4 Derived Types:

### 2.25.5 Figure:

### 2.25.6 Schema Fragment:

```
<xsd:complexType name="BusinessCenterTime">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A type for defining a time with respect to a business center
      location. For example, 11:00am London time.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:sequence>
    <xsd:element name="hourMinuteTime" type="HourMinuteTime">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          A time specified in hh:mm:ss format where the second
          component must be '00', e.g. 11am would be represented as
          11:00:00.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
    <xsd:element name="businessCenter" type="BusinessCenter"/>
  </xsd:sequence>
</xsd:complexType>
```

## 2.26 BusinessDateRange

### 2.26.1 Description:

A type defining a range of contiguous business days by defining an unadjusted first date, an unadjusted last date and a business day convention and business centers for adjusting the first and last dates if they would otherwise fall on a non business day in the specified business centers. The days between the first and last date must also be good business days in the specified centers to be counted in the range.

### 2.26.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type DateRange)

- A type defining a contiguous series of calendar dates. The date range is defined as all the dates between and including the first and the last date. The first date must fall before the last date.

**businessDayConvention** (exactly one occurrence; of the type BusinessDayConventionEnum) The convention for adjusting a date if it would otherwise fall on a day that is not a business day.

Either

**businessCentersReference** (exactly one occurrence; of the type BusinessCentersReference) A pointer style reference to a set of financial business centers defined elsewhere in the document. This set of business centers is used to determine whether a particular day is a business day or not.

Or

**businessCenters** (exactly one occurrence; of the type BusinessCenters)

### 2.26.3 Used by:

- Complex type: CashSettlementPaymentDate

### 2.26.4 Derived Types:

### 2.26.5 Figure:

### 2.26.6 Schema Fragment:

```
<xsd:complexType name="BusinessDateRange">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A type defining a range of contiguous business days by defining
      an unadjusted first date, an unadjusted last date and a business
      day convention and business centers for adjusting the first and
      last dates if they would otherwise fall on a non business day in
      the specified business centers. The days between the first and
      last date must also be good business days in the specified
      centers to be counted in the range.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:complexContent>
    <xsd:extension base="DateRange">
      <xsd:sequence>
        <xsd:element name="businessDayConvention" type="BusinessDayConventionEnum">
          <xsd:annotation>
            <xsd:documentation xml:lang="en">
              The convention for adjusting a date if it would otherwise
              fall on a day that is not a business day.
            </xsd:documentation>
          </xsd:annotation>
        </xsd:element>
        <xsd:group ref="BusinessCentersOrReference.model" minOccurs="0"/>
      </xsd:sequence>
    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

## 2.27 BusinessDayAdjustments

### 2.27.1 Description:

A type defining the business day convention and financial business centers used for adjusting any relevant date if it would otherwise fall on a day that is not a business day in the specified business centers.

### 2.27.2 Contents:

**businessDayConvention** (exactly one occurrence; of the type BusinessDayConventionEnum) The convention for adjusting a date if it would otherwise fall on a day that is not a business day.

Either

**businessCentersReference** (exactly one occurrence; of the type BusinessCentersReference) A pointer style reference to a set of financial business centers defined elsewhere in the document. This set of business centers is used to determine whether a particular day is a business day or not.

Or

**businessCenters** (exactly one occurrence; of the type BusinessCenters)

### 2.27.3 Used by:

- Complex type: AdjustableDate
- Complex type: AdjustableDate2
- Complex type: AdjustableDates
- Complex type: AdjustedRelativeDateOffset
- Complex type: CalculationPeriodDates
- Complex type: DividendPeriod
- Complex type: GeneralTerms
- Complex type: PaymentDates
- Complex type: PeriodicDates
- Complex type: ResetDates

### 2.27.4 Derived Types:

### 2.27.5 Figure:

### 2.27.6 Schema Fragment:

```
<xsd:complexType name="BusinessDayAdjustments">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A type defining the business day convention and financial
      business centers used for adjusting any relevant date if it would
      otherwise fall on a day that is not a business day in the
      specified business centers.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:sequence>
    <xsd:element name="businessDayConvention" type="BusinessDayConventionEnum">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">

        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
    <xsd:group ref="BusinessCentersOrReference.model" minOccurs="0"/>
  </xsd:sequence>
  <xsd:attribute name="id" type="xsd:ID"/>
</xsd:complexType>
```

## 2.28 BusinessDayAdjustmentsReference

### 2.28.1 Description:

Reference to a business day adjustments structure.

### 2.28.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type Reference)

- The abstract base class for all types which define intra-document pointers.

### 2.28.3 Used by:

- Complex type: AdjustableDate2

### 2.28.4 Derived Types:

### 2.28.5 Figure:

### 2.28.6 Schema Fragment:

```
<xsd:complexType name="BusinessDayAdjustmentsReference">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      Reference to a business day adjustments structure.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:complexContent>
    <xsd:extension base="Reference">
      <xsd:attribute name="href" type="xsd:IDREF" use="required" ecore:reference="BusinessDayA
    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

## 2.29 CalculationAgent

### 2.29.1 Description:

A type defining the ISDA calculation agent responsible for performing duties as defined in the applicable product definitions.

### 2.29.2 Contents:

Either

**calculationAgentPartyReference** (one or more occurrences; of the type PartyReference) A pointer style reference to a party identifier defined elsewhere in the document. The party referenced is the ISDA Calculation Agent for the trade. If more than one party is referenced then the parties are assumed to be co-calculation agents, i.e. they have joint responsibility.

Or

**calculationAgentParty** (exactly one occurrence; of the type CalculationAgentPartyEnum) The ISDA Calculation Agent where the actual party responsible for performing the duties associated with an optional early termination provision will be determined at exercise. For example, the Calculation Agent may be defined as being the Non-exercising Party.

### 2.29.3 Used by:

- Complex type: FallbackReferencePrice
- Complex type: MandatoryEarlyTermination
- Complex type: OptionalEarlyTermination
- Complex type: Swaption

### 2.29.4 Derived Types:

### 2.29.5 Figure:

### 2.29.6 Schema Fragment:

```
<xsd:complexType name="CalculationAgent">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A type defining the ISDA calculation agent responsible for
      performing duties as defined in the applicable product
      definitions.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:choice>
    <xsd:element name="calculationAgentPartyReference" type="PartyReference" maxOccurs="unbound">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          A pointer style reference to a party identifier defined
          elsewhere in the document. The party referenced is the ISDA
          Calculation Agent for the trade. If more than one party is
          referenced then the parties are assumed to be co-calculation
          agents, i.e. they have joint responsibility.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
    <xsd:element name="calculationAgentParty" type="CalculationAgentPartyEnum">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          The ISDA Calculation Agent where the actual party responsible
          for performing the duties associated with an optional early
          termination provision will be determined at exercise. For
          example, the Calculation Agent may be defined as being the
          Non-exercising Party.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
  </xsd:choice>
</xsd:complexType>
```

## 2.30 CalculationPeriodFrequency

### 2.30.1 Description:

A type defining the frequency at which calculation period end dates occur within the regular part of the calculation period schedule and their roll date convention.

### 2.30.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type Interval)

- A type defining a time interval or offset, e.g. one day, three months. Used for specifying frequencies at which events occur, the tenor of a floating rate or an offset relative to another date.

**rollConvention** (exactly one occurrence; of the type RollConventionEnum) Used in conjunction with a frequency and the regular period start date of a calculation period, determines each calculation period end date within the regular part of a calculation period schedule.

### 2.30.3 Used by:

- Complex type: CalculationPeriodDates
- Complex type: FxAverageRateObservationSchedule
- Complex type: PeriodicDates

### 2.30.4 Derived Types:

### 2.30.5 Figure:

### 2.30.6 Schema Fragment:

```
<xsd:complexType name="CalculationPeriodFrequency">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A type defining the frequency at which calculation period end
      dates occur within the regular part of the calculation period
      schedule and their roll date convention.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:complexContent>
    <xsd:extension base="Interval">
      <xsd:sequence>
        <xsd:element name="rollConvention" type="RollConventionEnum">
          <xsd:annotation>
            <xsd:documentation xml:lang="en">
              Used in conjunction with a frequency and the regular
              period start date of a calculation period, determines
              each calculation period end date within the regular part
              of a calculation period schedule.
            </xsd:documentation>
          </xsd:annotation>
        </xsd:element>
      </xsd:sequence>
    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

## 2.31 CashflowType

### 2.31.1 Description:

A coding scheme used to describe the type or purpose of a cash flow or cash flow component.

### 2.31.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type `xsd:normalizedString`)

•

### 2.31.3 Used by:

- Complex type: GrossCashflow

### 2.31.4 Derived Types:

### 2.31.5 Figure:

### 2.31.6 Schema Fragment:

```
<xsd:complexType name="CashflowType">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">

    </xsd:extension>
  </xsd:simpleContent>
</xsd:complexType>
```

## 2.32 CashSettlementReferenceBanks

### 2.32.1 Description:

A type defining the list of reference institutions polled for relevant rates or prices when determining the cash settlement amount for a product where cash settlement is applicable.

### 2.32.2 Contents:

**referenceBank** (one or more occurrences; of the type ReferenceBank) An institution (party) identified by means of a coding scheme and an optional name.

### 2.32.3 Used by:

- Complex type: CashPriceMethod
- Complex type: SettlementRateSource

### 2.32.4 Derived Types:

### 2.32.5 Figure:

### 2.32.6 Schema Fragment:

```
<xsd:complexType name="CashSettlementReferenceBanks">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A type defining the list of reference institutions polled for
      relevant rates or prices when determining the cash settlement
      amount for a product where cash settlement is applicable.
    </xsd:documentation>

  <xsd:sequence>
    <xsd:element name="referenceBank" type="ReferenceBank" maxOccurs="unbounded">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          An institution (party) identified by means of a coding scheme
          and an optional name.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
  </xsd:sequence>
  <xsd:attribute name="id" type="xsd:ID"/>
</xsd:complexType>
```

## 2.33 ClearanceSystem

### 2.33.1 Description:

Unless otherwise specified, the principal clearance system customarily used for settling trades in the relevant underlying.

### 2.33.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type xsd:normalizedString)

### 2.33.3 Used by:

- Complex type: UnderlyingAsset

### 2.33.4 Derived Types:

### 2.33.5 Figure:

### 2.33.6 Schema Fragment:

```
<xsd:complexType name="ClearanceSystem">

      <xsd:attribute name="clearanceSystemScheme" type="xsd:anyURI" default="http://www.fpml.org" />
    </xsd:extension>
  </xsd:simpleContent>
</xsd:complexType>
```

## 2.34 ContractualDefinitions

### 2.34.1 Description:

The definitions, such as those published by ISDA, that will define the terms of the trade.

### 2.34.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type xsd:normalizedString)

•

### 2.34.3 Used by:

- Complex type: Documentation

### 2.34.4 Derived Types:

### 2.34.5 Figure:

### 2.34.6 Schema Fragment:

      <xsd:attribute name="contractualDefinitionsScheme" type="xsd:anyURI" default="http://www
    </xsd:extension>
    </xsd:simpleContent>
  </xsd:complexType>
```

## 2.35 ContractualMatrix

### 2.35.1 Description:

### 2.35.2 Contents:

**matrixType** (exactly one occurrence; of the type MatrixType) Identifies the form of applicable matrix.

**publicationDate** (zero or one occurrence; of the type xsd:date) Specifies the publication date of the applicable version of the matrix. When this element is omitted, the ISDA supplemental language for incorporation of the relevant matrix will generally define rules for which version of the matrix is applicable.

**matrixTerm** (zero or one occurrence; of the type MatrixTerm) Defines any applicable key into the relevant matrix. For example, the Transaction Type would be the single term required for the Credit Derivatives Physical Settlement Matrix. This element should be omitted in the case of the 2000 ISDA Definitions Settlement Matrix for Early Termination and Swaptions.

### 2.35.3 Used by:

- Complex type: Documentation

### 2.35.4 Derived Types:

### 2.35.5 Figure:

</xsd:complexType>
```

## 2.37 ContractualTermsSupplement

### 2.37.1 Description:

A contractual supplement (such as those published by ISDA) and its publication date that will apply to the trade.

### 2.37.2 Contents:

**type** (exactly one occurrence; of the type ContractualSupplement) Identifies the form of applicable contractual supplement.

**publicationDate** (zero or one occurrence; of the type xsd:date) Specifies the publication date of the applicable version of the contractual supplement.

### 2.37.3 Used by:

- Complex type: Documentation

### 2.37.4 Derived Types:

### 2.37.5 Figure:

### 2.37.6 Schema Fragment:

```

## 2.38 CorrespondentInformation

### 2.38.1 Description:

A type that describes the information to identify a correspondent bank that will make delivery of the funds on the paying bank's behalf in the country where the payment is to be made.

### 2.38.2 Contents:

Either

**routingIds** (exactly one occurrence; of the type RoutingIds) A set of unique identifiers for a party, each one identifying the party within a payment system. The assumption is that each party will not have more than one identifier within the same payment system.

Or

**routingExplicitDetails** (exactly one occurrence; of the type RoutingExplicitDetails) A set of details that is used to identify a party involved in the routing of a payment when the party does not have a code that identifies it within one of the recognized payment systems.

Or

**routingIdsAndExplicitDetails** (exactly one occurrence; of the type RoutingIdsAndExplicitDetails) A combination of coded payment system identifiers and details for physical addressing for a party involved in the routing of a payment.

**correspondentPartyReference** (zero or one occurrence; of the type PartyReference) Link to the party acting as correspondent. This element can only appear within the correspondentInformation container element.

### 2.38.3 Used by:

- Complex type: SettlementInstruction

### 2.38.4 Derived Types:

### 2.38.5 Figure:

### 2.38.6 Schema Fragment:

    </xsd:documentation>
  </xsd:annotation>
  <xsd:sequence>
    <xsd:element name="date" type="xsd:date" maxOccurs="unbounded"/>
  </xsd:sequence>
</xsd:complexType>
```

## 2.43 DateOffset

### 2.43.1 Description:

A type defining an offset used in calculating a date when this date is defined in reference to another date through a date offset. The type includes the convention for adjusting the date and an optional sequence element to indicate the order in a sequence of multiple date offsets.

### 2.43.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type Offset)

- A type defining an offset used in calculating a new date relative to a reference date. Currently, the only offsets defined are expected to be expressed as either calendar or business day offsets.

**businessDayConvention** (exactly one occurrence; of the type BusinessDayConventionEnum) The convention for adjusting a date if it would otherwise fall on a day that is not a business day.

**sequence** (zero or one occurrence; of the type xsd:positiveInteger) Sequence in which the reference to the time period multiplier should be applied.

### 2.43.3 Used by:

- Complex type: RelativeDateSequence

### 2.43.4 Derived Types:

### 2.43.5 Figure:

### 2.43.6 Schema Fragment:

```
<xsd:complexType name="DateOffset">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">

      and an optional sequence element to indicate the order in a
      sequence of multiple date offsets.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:complexContent>
    <xsd:extension base="Offset">
      <xsd:sequence>
        <xsd:element name="businessDayConvention" type="BusinessDayConventionEnum">
          <xsd:annotation>
            <xsd:documentation xml:lang="en">
              The convention for adjusting a date if it would otherwise
              fall on a day that is not a business day.
            </xsd:documentation>
          </xsd:annotation>
        </xsd:element>
        <xsd:element name="sequence" type="xsd:positiveInteger" minOccurs="0">
          <xsd:annotation>
            <xsd:documentation xml:lang="en">
              Sequence in which the reference to the time period
              multiplier should be applied.
            </xsd:documentation>
          </xsd:annotation>
        </xsd:element>
      </xsd:sequence>
    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

## 2.44 DateRange

### 2.44.1 Description:

A type defining a contiguous series of calendar dates. The date range is defined as all the dates between and including the first and the last date. The first date must fall before the last date.

### 2.44.2 Contents:

**unadjustedFirstDate** (exactly one occurrence; of the type xsd:date) The first date of a date range.

**unadjustedLastDate** (exactly one occurrence; of the type xsd:date) The last date of a date range.

### 2.44.3 Used by:

- Complex type: BusinessDateRange
- Complex type: RelativeDates

### 2.44.4 Derived Types:

- Complex type: BusinessDateRange

### 2.44.5 Figure:

### 2.44.6 Schema Fragment:

```
<xsd:complexType name="DateRange">

        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
  </xsd:sequence>
</xsd:complexType>
```

## 2.45 DateReference

### 2.45.1 Description:

Reference to an identified date or a complex date structure.

### 2.45.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type Reference)

- The abstract base class for all types which define intra-document pointers.

### 2.45.3 Used by:

- Complex type: DividendConditions
- Complex type: RelativeDateOffset
- Complex type: RelativeDateSequence
- Complex type: StartingDate

### 2.45.4 Derived Types:

### 2.45.5 Figure:

    <xsd:element name="dateTime" type="xsd:dateTime" maxOccurs="unbounded"/>
  </xsd:sequence>
</xsd:complexType>
```

## 2.47 DayCountFraction

### 2.47.1 Description:

The specification for how the number of days between two dates is calculated for purposes of calculation of a fixed or floating payment amount and the basis for how many days are assumed to be in a year. Day Count Fraction is an ISDA term. The equivalent AFB (Association Francaise de Banques) term is Calculation Basis.

### 2.47.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type xsd:normalizedString)

### 2.47.3 Used by:

- Complex type: Calculation
- Complex type: CashflowCalculationPeriod
- Complex type: Deposit
- Complex type: Discounting
- Complex type: FixedAmountCalculation
- Complex type: Fra
- Complex type: InterestCalculation
- Complex type: InterestRatePeriod
- Complex type: OnGoingFeePayment
- Complex type: RateIndex
- Complex type: SimpleFra
- Complex type: SimpleIRSwap

## 2.48 DeterminationMethod

### 2.48.1 Description:

Coding scheme that specifies the method according to which an amount or a date is determined.

### 2.48.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type xsd:normalizedString)

•

### 2.48.3 Used by:

- Complex type: Composite
- Complex type: DividendConditions
- Complex type: LegAmount
- Complex type: PaymentCurrency
- Complex type: Price
- Complex type: PrincipalExchangeAmount
- Complex type: ReturnSwapNotional

### 2.48.4 Derived Types:

### 2.48.5 Figure:

### 2.48.6 Schema Fragment:

```
<xsd:complexType name="DeterminationMethod">
  <xsd:annotation>

      <xsd:attribute name="determinationMethodScheme" type="xsd:anyURI"/>
    </xsd:extension>
  </xsd:simpleContent>
</xsd:complexType>
```

## 2.49 DividendConditions

### 2.49.1 Description:

A type describing the conditions governing the payment of dividends to the receiver of the equity return. With the exception of the dividend payout ratio, which is defined for each of the underlying components.

### 2.49.2 Contents:

**dividendReinvestment** (zero or one occurrence; of the type xsd:boolean) Boolean element that defines whether the dividend will be reinvested or not.

**dividendEntitlement** (zero or one occurrence; of the type DividendEntitlementEnum) Defines the date on which the receiver on the equity return is entitled to the dividend.

**dividendAmount** (zero or one occurrence; of the type DividendAmountTypeEnum)

**dividendPaymentDate** (zero or one occurrence; of the type DividendPaymentDate) Specifies when the dividend will be paid to the receiver of the equity return. Has the meaning as defined in the ISDA 2002 Equity Derivatives Definitions. Is not applicable in the case of a dividend reinvestment election.

Either

**dividendPeriod** (exactly one occurrence; of the type DividendPeriodEnum) Defines the First Period or the Second Period, as defined in the 2002 ISDA Equity Derivatives Definitions.

**extraOrdinaryDividends** (zero or one occurrence; of the type PartyReference) Reference to the party which determines if dividends are extraordinary in relation to normal levels.

**excessDividendAmount** (zero or one occurrence; of the type DividendAmountTypeEnum) Determination of Gross Cash Dividend per Share

Either

**currency** (exactly one occurrence; of the type Currency) The currency in which an amount is denominated.

Or

**determinationMethod** (exactly one occurrence; of the type DeterminationMethod) Specifies the method according to which an amount or a date is determined.

Or

**currencyReference** (exactly one occurrence; of the type IdentifiedCurrencyReference) The currency in which an amount is denominated.

**paymentCurrency** (zero or one occurrence; of the type PaymentCurrency) Currency in which the payment relating to the leg amount (equity amount or interest amount) or the dividend will be denominated.

**dividendFxTriggerDate** (zero or one occurrence; of the type DividendPaymentDate) Specifies the date on which the FX rate will be considered in the case of a Composite FX swap.

**interestAccrualsMethod** (zero or one occurrence; of the type InterestAccrualsCompoundingMethod) Defines the way in which interests are accrued: the applicable rate (fixed or floating reference) and the compounding method.

## 2.50 DividendPaymentDate

### 2.50.1 Description:

A type describing the date on which the dividend will be paid/received. This type is also used to specify the date on which the FX rate will be determined, when applicable.

### 2.50.2 Contents:

Either

**adjustableDate** (exactly one occurrence; of the type AdjustableDate) A date that shall be subject to adjustment if it would otherwise fall on a day that is not a business day in the specified business centers, together with the convention for adjusting the date.

### 2.50.3 Used by:

- Complex type: DividendConditions

### 2.50.4 Derived Types:

### 2.50.5 Figure:

## 2.51 Documentation

### 2.51.1 Description:

An entity for defining the definitions that govern the document and should include the year and type of definitions referenced, along with any relevant documentation (such as master agreement) and the date it was signed.

### 2.51.2 Contents:

**masterAgreement** (zero or one occurrence; of the type MasterAgreement) The agreement executed between the parties and intended to govern all OTC derivatives transactions between those parties.

Either

**masterConfirmation** (exactly one occurrence; of the type MasterConfirmation) The agreement executed between the parties and intended to govern all OTC derivatives transactions between those parties.

Or

**brokerConfirmation** (exactly one occurrence; of the type BrokerConfirmation) Specifies the details for a broker confirm.

**contractualDefinitions** (zero or more occurrences; of the type ContractualDefinitions) The definitions such as those published by ISDA that will define the terms of the trade.

Either

**contractualSupplement** (zero or more occurrences; of the type ContractualSupplement) DEPRECATED - This element will be removed in the next major version of FpML. The element contractualTermsSupplement should be used instead. Definition: A contractual supplement (such as those published by ISDA) that will apply to the trade.

Or

**contractualTermsSupplement** (zero or more occurrences; of the type ContractualTermsSupplement) A contractual supplement (such as those published by ISDA) that will apply to the trade.

**contractualMatrix** (zero or more occurrences; of the type ContractualMatrix) A reference to a contractual matrix of elected terms/values (such as those published by ISDA) that shall be deemed to apply to the trade. The applicable matrix is identified by reference to a name and optionally a publication date. Depending on the structure of the matrix, an additional term (specified in the matrixTerm element) may be required to further identify a subset of applicable terms/values within the matrix.

**creditSupportDocument** (zero or one occurrence; of the type xsd:normalizedString) The agreement executed between the parties and intended to govern collateral arrangement for all OTC derivatives transactions between those parties.

## 2.55 EuropeanExercise

### 2.55.1 Description:

A type defining the exercise period for a European style option together with any rules governing the notional amount of the underlying which can be exercised on any given exercise date and any associated exercise fees.

### 2.55.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type Exercise)

- The abstract base class for all types which define way in which options may be exercised.

**expirationDate** (exactly one occurrence; of the type AdjustableOrRelativeDate) The last day within an exercise period for an American style option. For a European style option it is the only day within the exercise period.

**relevantUnderlyingDate** (zero or one occurrence; of the type AdjustableOrRelativeDates) The day on the underlying set by the exercise of an option. What this date is depends on the option (e.g. in a swaption it is the effective date, in an extendible/cancelable provision it is the termination date).

**earliestExerciseTime** (exactly one occurrence; of the type BusinessCenterTime) The earliest time at which notice of exercise can be given by the buyer to the seller (or seller's agent) i) on the expiration date, in the case of a European style option, (ii) on each bermuda option exercise date and the expiration date, in the case of a Bermuda style option the commencement date to, and including, the expiration date, in the case of an American option.

**expirationTime** (exactly one occurrence; of the type BusinessCenterTime) The latest time for exercise on expirationDate.

**partialExercise** (zero or one occurrence; of the type PartialExercise) As defined in the 2000 ISDA Definitions, Section 12.3. Partial Exercise, the buyer of the option has the right to exercise all or less than all the notional amount of the underlying swap on the expiration date, but may not exercise less than the minimum notional amount, and if an integral multiple amount is specified, the notional amount exercised must be equal to, or be an integral multiple of, the integral multiple amount.

**exerciseFee** (zero or one occurrence; of the type ExerciseFee) A fee to be paid on exercise. This could be represented as an amount or a rate and notional reference on which to apply the rate.

## 2.58 ExerciseFee

### 2.58.1 Description:

A type defining the fee payable on exercise of an option. This fee may be defined as an amount or a percentage of the notional exercised.

### 2.58.2 Contents:

**payerPartyReference** (exactly one occurrence; of the type PartyOrAccountReference) A reference to the party responsible for making the payments defined by this structure.

**receiverPartyReference** (exactly one occurrence; of the type PartyOrAccountReference) A reference to the party that receives the payments corresponding to this structure.

**notionalReference** (exactly one occurrence; of the type ScheduleReference) A pointer style reference to the associated notional schedule defined elsewhere in the document.

Either

**feeAmount** (exactly one occurrence; of the type xsd:decimal) The amount of fee to be paid on exercise. The fee currency is that of the referenced notional.

Or

**feeRate** (exactly one occurrence; of the type xsd:decimal) A fee represented as a percentage of some referenced notional. A percentage of 5% would be represented as 0.05.

**feePaymentDate** (exactly one occurrence; of the type RelativeDateOffset) The date on which exercise fee(s) will be paid. It is specified as a relative date.

### 2.58.3 Used by:

## 2.59 ExerciseFeeSchedule

### 2.59.1 Description:

A type to define a fee or schedule of fees to be payable on the exercise of an option. This fee may be defined as an amount or a percentage of the notional exercised.

### 2.59.2 Contents:

**payerPartyReference** (exactly one occurrence; of the type PartyOrAccountReference) A reference to the party responsible for making the payments defined by this structure.

**receiverPartyReference** (exactly one occurrence; of the type PartyOrAccountReference) A reference to the party that receives the payments corresponding to this structure.

**notionalReference** (exactly one occurrence; of the type ScheduleReference) A pointer style reference to the associated notional schedule defined elsewhere in the document.

Either

**feeAmountSchedule** (exactly one occurrence; of the type AmountSchedule) The exercise fee amount schedule. The fees are expressed as currency amounts. The currency of the fee is assumed to be that of the notional schedule referenced.

Or

**feeRateSchedule** (exactly one occurrence; of the type Schedule) The exercise free rate schedule. The fees are expressed as percentage rates of the notional being exercised. The currency of the fee is assumed to be that of the notional schedule referenced.

**feePaymentDate** (exactly one occurrence; of the type RelativeDateOffset) The date on which exercise fee(s) will be paid. It is specified as a relative date.

## 2.60 ExerciseNotice

### 2.60.1 Description:

A type defining to whom and where notice of execution should be given. The partyReference refers to one of the principal parties of the trade. If present the exerciseNoticePartyReference refers to a party, other than the principal party, to whom notice should be given.

### 2.60.2 Contents:

**partyReference** (exactly one occurrence; of the type PartyReference) The party referenced has allocated the trade identifier.

**exerciseNoticePartyReference** (zero or one occurrence; of the type PartyReference) The party referenced is the party to which notice of exercise should be given by the buyer.

**businessCenter** (exactly one occurrence; of the type BusinessCenter)

### 2.60.3 Used by:

- Complex type: CancelableProvision
- Complex type: ExtendibleProvision
- Complex type: ManualExercise
- Complex type: OptionalEarlyTermination

### 2.60.4 Derived Types:

### 2.60.5 Figure:

### 2.60.6 Schema Fragment:

    <xsd:element name="businessCenter" type="BusinessCenter"/>
  </xsd:sequence>
</xsd:complexType>
```

## 2.61 ExerciseProcedure

### 2.61.1 Description:

A type describing how notice of exercise should be given. This can be either manual or automatic.

### 2.61.2 Contents:

Either

**manualExercise** (exactly one occurrence; of the type ManualExercise) Specifies that the notice of exercise must be given by the buyer to the seller or seller's agent.

Or

**automaticExercise** (exactly one occurrence; of the type AutomaticExercise) If automatic is specified then the notional amount of the underlying swap, not previously exercised under the swaption will be automatically exercised at the expiration time on the expiration date if at such time the buyer is in-the-money, provided that the difference between the settlement rate and the fixed rate under the relevant underlying swap is not less than the specified threshold rate. The term in-the-money is assumed to have the meaning defining in the 2000 ISDA Definitions, Section 17.4 In-the-money.

**followUpConfirmation** (exactly one occurrence; of the type xsd:boolean) A flag to indicate whether follow-up confirmation of exercise (written or electronic) is required following telephonic notice by the buyer to the seller or seller's agent.

**limitedRightToConfirm** (zero or one occurrence; of the type xsd:boolean) Has the meaning defined as part of the 1997 ISDA Government Bond Option Definitions, section 4.5 Limited Right to Confirm Exercise. If present, (i) the Seller may request the Buyer to confirm its intent if not done on or before the expiration time on the Expiration date (ii) specific rules will apply in relation to the settlement mode.

**splitTicket** (zero or one occurrence; of the type xsd:boolean) Typically applicable to the physical settlement of bond and convertible bond options. If present, means that the Party required to deliver the bonds will divide those to be delivered as notifying party desires to facilitate delivery obligations.

## 2.62 FloatingRate

### 2.62.1 Description:

A type defining a floating rate.

### 2.62.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type Rate)

- The abstract base class for all types which define interest rate streams.

**floatingRateIndex** (exactly one occurrence; of the type FloatingRateIndex)

**indexTenor** (zero or one occurrence; of the type Interval) The ISDA Designated Maturity, i.e. the tenor of the floating rate.

**floatingRateMultiplierSchedule** (zero or one occurrence; of the type Schedule) A rate multiplier or multiplier schedule to apply to the floating rate. A multiplier schedule is expressed as explicit multipliers and dates. In the case of a schedule, the step dates may be subject to adjustment in accordance with any adjustments specified in the calculationPeriodDatesAdjustments. The multiplier can be a positive or negative decimal. This element should only be included if the multiplier is not equal to 1 (one) for the term of the stream.

**spreadSchedule** (zero or more occurrences; of the type SpreadSchedule) The ISDA Spread or a Spread schedule expressed as explicit spreads and dates. In the case of a schedule, the step dates may be subject to adjustment in accordance with any adjustments specified in calculationPeriodDatesAdjustments. The spread is a per annum rate, expressed as a decimal. For purposes of determining a calculation period amount, if positive the spread will be added to the floating rate and if negative the spread will be subtracted from the floating rate. A positive 10 basis point (0.1%) spread would be represented as 0.001.

**rateTreatment** (zero or one occurrence; of the type RateTreatmentEnum) The specification of any rate conversion which needs to be applied to the observed rate before being used in any calculations. The two common conversions are for securities quoted on a bank discount basis which will need to be converted to either a Money Market Yield or Bond Equivalent Yield. See the Annex to the 2000 ISDA Definitions, Section 7.3. Certain General Definitions Relating to Floating Rate Options, paragraphs (g) and (h) for definitions of these terms.

**capRateSchedule** (zero or more occurrences; of the type StrikeSchedule) The cap rate or cap rate schedule, if any, which applies to the floating rate. The cap rate (strike) is only required where the floating rate on a swap stream is capped at a certain level. A cap rate schedule is expressed as explicit cap rates and dates and the step dates may be subject to adjustment in accordance with any adjustments specified in calculationPeriodDatesAdjustments. The cap rate is assumed to be exclusive of any spread and is a per annum rate, expressed as a decimal. A cap rate of 5% would be represented as 0.05.

**floorRateSchedule** (zero or more occurrences; of the type StrikeSchedule) The floor rate or floor rate schedule, if any, which applies to the floating rate. The floor rate (strike) is only required where the floating rate on a swap stream is floored at a certain strike level. A floor rate schedule is expressed as explicit floor rates and dates and the step dates may be subject to adjustment in accordance with any adjustments specified in calculationPeriodDatesAdjustments. The floor rate is assumed to be exclusive of any spread and is a per annum rate, expressed as a decimal. A floor rate of 5% would be represented as 0.05.

## 2.63 FloatingRateCalculation

### 2.63.1 Description:

A type defining the floating rate and definitions relating to the calculation of floating rate amounts.

### 2.63.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type FloatingRate)

- A type defining a floating rate.

**initialRate** (zero or one occurrence; of the type xsd:decimal) The initial floating rate reset agreed between the principal parties involved in the trade. This is assumed to be the first required reset rate for the first regular calculation period. It should only be included when the rate is not equal to the rate published on the source implied by the floating rate index. An initial rate of 5% would be represented as 0.05.

**finalRateRounding** (zero or one occurrence; of the type Rounding) The rounding convention to apply to the final rate used in determination of a calculation period amount.

**averagingMethod** (zero or one occurrence; of the type AveragingMethodEnum) If averaging is applicable, this component specifies whether a weighted or unweighted average method of calculation is to be used. The component must only be included when averaging applies.

**negativeInterestRateTreatment** (zero or one occurrence; of the type NegativeInterestRateTreatmentEnum) The specification of any provisions for calculating payment obligations when a floating rate is negative (either due to a quoted negative floating rate or by operation of a spread that is subtracted from the floating rate).

### 2.63.3 Used by:

```

## 2.67 FormulaComponent

### 2.67.1 Description:

Elements describing the components of the formula. The name attribute points to a value used in the math element. The href attribute points to a numeric value defined elsewhere in the document that is used by the formula component.

### 2.67.2 Contents:

**componentDescription** (exactly one occurrence; of the type xsd:string) Text description of the component

**formula** (zero or one occurrence; of the type Formula) Additional formulas required to describe this component

### 2.67.3 Used by:

- Complex type: Formula

### 2.67.4 Derived Types:

### 2.67.5 Figure:

### 2.67.6 Schema Fragment:

```

## 2.68 FxCashSettlement

### 2.68.1 Description:

A type that is used for describing cash settlement of an option / non deliverable forward. It includes the currency to settle into together with the fixings required to calculate the currency amount.

### 2.68.2 Contents:

**settlementCurrency** (exactly one occurrence; of the type Currency) The currency in which a cash settlement for non-deliverable forward and non-deliverable options.

**fixing** (one or more occurrences; of the type FxFixing) Specifies the source for and timing of a fixing of an exchange rate. This is used in the agreement of non-deliverable forward trades as well as various types of FX OTC options that require observations against a particular rate.

### 2.68.3 Used by:

- Complex type: FxLeg
- Complex type: FxOptionLeg
- Complex type: QuotableFxLeg

### 2.68.4 Derived Types:

### 2.68.5 Figure:

### 2.68.6 Schema Fragment:

## 2.69 FxFixing

### 2.69.1 Description:

A type that specifies the source for and timing of a fixing of an exchange rate. This is used in the agreement of non-deliverable forward trades as well as various types of FX OTC options that require observations against a particular rate.

### 2.69.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type FxSpotRateSource)

- A type defining the source and time for an fx rate.

**quotedCurrencyPair** (exactly one occurrence; of the type QuotedCurrencyPair) Defines the two currencies for an FX trade and the quotation relationship between the two currencies.

**fixingDate** (exactly one occurrence; of the type xsd:date) Describes the specific date when a non-deliverable forward or non-deliverable option will "fix" against a particular rate, which will be used to compute the ultimate cash settlement.

### 2.69.3 Used by:

- Complex type: FxCashSettlement

### 2.69.4 Derived Types:

### 2.69.5 Figure:

### 2.69.6 Schema Fragment:

</xsd:complexType>
```

## 2.70 FxRate

### 2.70.1 Description:

A type describing the rate of a currency conversion: pair of currency, quotation mode and exchange rate.

### 2.70.2 Contents:

**quotedCurrencyPair** (exactly one occurrence; of the type QuotedCurrencyPair) Defines the two currencies for an FX trade and the quotation relationship between the two currencies.

**rate** (exactly one occurrence; of the type xsd:decimal) The rate of exchange between the two currencies of the leg of a deal. Must be specified with a quote basis.

### 2.70.3 Used by:

- Complex type: ExchangeRate
- Complex type: AssetValuation
- Complex type: Commission
- Complex type: FxConversion
- Complex type: FxTerms
- Complex type: Quanto

### 2.70.4 Derived Types:

- Complex type: ExchangeRate

### 2.70.5 Figure:

### 2.70.6 Schema Fragment:

</xsd:complexType>
```

## 2.71 FxSpotRateSource

### 2.71.1 Description:

A type defining the source and time for an fx rate.

### 2.71.2 Contents:

**primaryRateSource** (exactly one occurrence; of the type InformationSource) The primary source for where the rate observation will occur. Will typically be either a page or a reference bank published rate.

**secondaryRateSource** (zero or one occurrence; of the type InformationSource) An alternative, or secondary, source for where the rate observation will occur. Will typically be either a page or a reference bank published rate.

**fixingTime** (exactly one occurrence; of the type BusinessCenterTime) The time at which the spot currency exchange rate will be observed. It is specified as a time in a specific business center, e.g. 11:00am London time.

### 2.71.3 Used by:

- Complex type: FxFixing
- Complex type: Composite
- Complex type: FxLinkedNotionalSchedule
- Complex type: FxRateAsset
- Complex type: Quanto

### 2.71.4 Derived Types:

- Complex type: FxFixing

    </xsd:extension>
  </xsd:simpleContent>
</xsd:complexType>
```

## 2.74 IdentifiedCurrencyReference

### 2.74.1 Description:

Reference to a currency with ID attribute

### 2.74.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type Reference)

- The abstract base class for all types which define intra-document pointers.

### 2.74.3 Used by:

- Complex type: DividendConditions
- Complex type: LegAmount

### 2.74.4 Derived Types:

### 2.74.5 Figure:

### 2.74.6 Schema Fragment:

```
<xsd:complexType name="IdentifiedCurrencyReference">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">

    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

## 2.75 IdentifiedDate

### 2.75.1 Description:

A date which can be referenced elsewhere.

### 2.75.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type xsd:date)

•

### 2.75.3 Used by:

- Complex type: AdjustableDate
- Complex type: AdjustableDate2
- Complex type: AdjustableDates
- Complex type: AdjustableOrRelativeAndAdjustedDate
- Complex type: ContractHeader
- Complex type: DerivedValuationScenario
- Complex type: DividendPeriod
- Complex type: MakeWholeAmount
- Complex type: Payment
- Complex type: PositionReport
- Complex type: TradeDetails
- Complex type: TradeHeader
- Complex type: ValuationScenario

### 2.75.4 Derived Types:

### 2.75.5 Figure:

### 2.75.6 Schema Fragment:

```
<xsd:complexType name="IdentifiedDate">

    </xsd:extension>
  </xsd:simpleContent>
</xsd:complexType>
```

## 2.76 IdentifiedPayerReceiver

### 2.76.1 Description:

A type extending the PayerReceiverEnum type with an id attribute.

### 2.76.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type PayerReceiverEnum)

•

### 2.76.3 Used by:

- Complex type: Strike
- Complex type: StrikeSchedule

### 2.76.4 Derived Types:

### 2.76.5 Figure:

### 2.76.6 Schema Fragment:

```
<xsd:complexType name="IdentifiedPayerReceiver">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A type extending the PayerReceiverEnum type with an id attribute.

</xsd:complexType>
```

## 2.78 InformationSource

### 2.78.1 Description:

A type defining the source for a piece of information (e.g. a rate refix or an fx fixing).

### 2.78.2 Contents:

**rateSource** (exactly one occurrence; of the type InformationProvider) An information source for obtaining a market rate. For example Bloomberg, Reuters, Telerate etc.

**rateSourcePage** (zero or one occurrence; of the type RateSourcePage) A specific page for the rate source for obtaining a market rate.

**rateSourcePageHeading** (zero or one occurrence; of the type xsd:string) The heading for the rate source on a given rate source page.

### 2.78.3 Used by:

- Complex type: FxAmericanTrigger
- Complex type: FxAverageRateOption
- Complex type: FxBarrier
- Complex type: FxEuropeanTrigger
- Complex type: FxSpotRateSource
- Complex type: SettlementRateSource

### 2.78.4 Derived Types:

### 2.78.5 Figure:

### 2.78.6 Schema Fragment:

```
<xsd:complexType name="InformationSource">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A type defining the source for a piece of information (e.g. a
      rate refix or an fx fixing).

      <xsd:attribute name="instrumentIdScheme" type="xsd:anyURI" use="required"/>
    </xsd:extension>
  </xsd:simpleContent>
</xsd:complexType>
```

## 2.80 InterestAccrualsCompoundingMethod

### 2.80.1 Description:

A type defining the way in which interests are accrued: the applicable rate (fixed or floating reference) and the compounding method.

### 2.80.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type InterestAccrualsMethod)

- A type describing the method for accruing interests on dividends. Can be either a fixed rate reference or a floating rate reference.

**compoundingMethod** (exactly one occurrence; of the type CompoundingMethodEnum) If more than one calculation period contributes to a single payment amount this element specifies whether compounding is applicable, and if so, what compounding method is to be used. This element must only be included when more than one calculation period contributes to a single payment amount.

### 2.80.3 Used by:

- Complex type: DividendConditions

### 2.80.4 Derived Types:

### 2.80.5 Figure:

### 2.80.6 Schema Fragment:

```
<xsd:complexType name="InterestAccrualsCompoundingMethod">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">

              single payment amount.
            </xsd:documentation>
          </xsd:annotation>
        </xsd:element>
      </xsd:sequence>
    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

## 2.81 InterestAccrualsMethod

### 2.81.1 Description:

A type describing the method for accruing interests on dividends. Can be either a fixed rate reference or a floating rate reference.

### 2.81.2 Contents:

Either

**floatingRateCalculation** (exactly one occurrence; of the type FloatingRateCalculation) The floating rate calculation definitions

Or

**fixedRate** (exactly one occurrence; of the type xsd:decimal) The calculation period fixed rate. A per annum rate, expressed as a decimal. A fixed rate of 5% would be represented as 0.05.

### 2.81.3 Used by:

- Complex type: InterestAccrualsCompoundingMethod
- Complex type: InterestCalculation
- Complex type: CompoundingRate

### 2.81.4 Derived Types:

- Complex type: InterestAccrualsCompoundingMethod
- Complex type: InterestCalculation

### 2.81.5 Figure:

### 2.81.6 Schema Fragment:

```
<xsd:complexType name="InterestAccrualsMethod">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A type describing the method for accruing interests on dividends.

    </xsd:element>
  </xsd:choice>
</xsd:complexType>
```

## 2.82 IntermediaryInformation

### 2.82.1 Description:

A type that describes the information to identify an intermediary through which payment will be made by the correspondent bank to the ultimate beneficiary of the funds.

### 2.82.2 Contents:

Either

**routingIds** (exactly one occurrence; of the type RoutingIds) A set of unique identifiers for a party, each one identifying the party within a payment system. The assumption is that each party will not have more than one identifier within the same payment system.

Or

**routingExplicitDetails** (exactly one occurrence; of the type RoutingExplicitDetails) A set of details that is used to identify a party involved in the routing of a payment when the party does not have a code that identifies it within one of the recognized payment systems.

Or

**routingIdsAndExplicitDetails** (exactly one occurrence; of the type RoutingIdsAndExplicitDetails) A combination of coded payment system identifiers and details for physical addressing for a party involved in the routing of a payment.

**intermediarySequenceNumber** (exactly one occurrence; of the type xsd:positiveInteger) A sequence number that gives the position of the current intermediary in the chain of payment intermediaries. The assumed domain value set is an ascending sequence of integers starting from 1.

**intermediaryPartyReference** (zero or one occurrence; of the type PartyReference) Reference to the party acting as intermediary.

### 2.82.3 Used by:

- Complex type: SettlementInstruction

    </xsd:extension>
  </xsd:simpleContent>
</xsd:complexType>
```

## 2.84 Interval

### 2.84.1 Description:

A type defining a time interval or offset, e.g. one day, three months. Used for specifying frequencies at which events occur, the tenor of a floating rate or an offset relative to another date.

### 2.84.2 Contents:

**periodMultiplier** (exactly one occurrence; of the type `xsd:integer`) A time period multiplier, e.g. 1, 2 or 3 etc. A negative value can be used when specifying an offset relative to another date, e.g. -2 days. If the period value is T (Term) then `periodMultiplier` must contain the value 1.

**period** (exactly one occurrence; of the type `PeriodEnum`) A time period, e.g. a day, week, month, year or term of the stream. If the `periodMultiplier` value is 0 (zero) then `period` must contain the value D (day).

### 2.84.3 Used by:

- Complex type: `CalculationPeriodFrequency`
- Complex type: `Offset`
- Complex type: `ResetFrequency`
- Complex type: `DeliverableObligations`
- Complex type: `Deposit`
- Complex type: `ExercisePeriod`
- Complex type: `ForecastRateIndex`
- Complex type: `Fra`
- Complex type: `InterestRatePeriod`
- Complex type: `LoanContract`
- Complex type: `NotionalStepRule`
- Complex type: `PaymentDates`
- Complex type: `PeriodicPayment`
- Complex type: `QuotedAs`
- Complex type: `RateIndex`
- Complex type: `ReturnSwapLeg`
- Complex type: `ScheduledTerminationDate`
- Complex type: `SimpleCreditDefaultSwap`
- Complex type: `SimpleFra`
- Complex type: `SimpleIRSwap`
- Complex type: `TimeDimension`

### 2.84.4 Derived Types:

- Complex type: `CalculationPeriodFrequency`
- Complex type: `Offset`
- Complex type: `ResetFrequency`

### 2.84.5 Figure:

### 2.84.6 Schema Fragment:

    </xsd:documentation>
  </xsd:annotation>
</xsd:complexType>
```

## 2.86 LegalEntity

### 2.86.1 Description:

A type defining a legal entity.

### 2.86.2 Contents:

Either

**entityId** (one or more occurrences; of the type EntityId) A legal entity identifier (e.g. RED entity code)..

### 2.86.3 Used by:

- Complex type: CreditEventNoticeDocument
- Complex type: IndexReferenceInformation
- Complex type: Loan
- Complex type: Mortgage
- Complex type: ReferenceInformation
- Complex type: ReferenceObligation
- Complex type: ReferencePair
- Complex type: TradeUnderlyer

### 2.86.4 Derived Types:

### 2.86.5 Figure:

### 2.86.6 Schema Fragment:

```
<xsd:complexType name="LegalEntity">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A type defining a legal entity.

    </xsd:element>
  </xsd:choice>
  <xsd:attribute name="id" type="xsd:ID"/>
</xsd:complexType>
```

## 2.87 LegalEntityReference

### 2.87.1 Description:

References a credit entity defined elsewhere in the document.

### 2.87.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type Reference)

- The abstract base class for all types which define intra-document pointers.

### 2.87.3 Used by:

- Complex type: Loan
- Complex type: Mortgage
- Complex type: ReferenceObligation

### 2.87.4 Derived Types:

### 2.87.5 Figure:

### 2.87.6 Schema Fragment:

    </xsd:extension>
  </xsd:simpleContent>
</xsd:complexType>
```

## 2.89 ManualExercise

### 2.89.1 Description:

A type defining manual exercise, i.e. that the option buyer counterparty must give notice to the option seller of exercise.

### 2.89.2 Contents:

**exerciseNotice** (zero or one occurrence; of the type ExerciseNotice) Definition of the party to whom notice of exercise should be given.

**fallbackExercise** (zero or one occurrence; of the type xsd:boolean) If fallback exercise is specified then the notional amount of the underlying swap, not previously exercised under the swaption, will be automatically exercised at the expiration time on the expiration date if at such time the buyer is in-the-money, provided that the difference between the settlement rate and the fixed rate under the relevant underlying swap is not less than one tenth of a percentage point (0.10% or 0.001). The term in-the-money is assumed to have the meaning defined in the 2000 ISDA Definitions, Section 17.4. In-the-money.

### 2.89.3 Used by:

- Complex type: ExerciseProcedure

### 2.89.4 Derived Types:

### 2.89.5 Figure:

### 2.89.6 Schema Fragment:

</xsd:complexType>

```

## 2.99 MultipleExercise

### 2.99.1 Description:

A type defining multiple exercises. As defining in the 2000 ISDA Definitions, Section 12.4. Multiple Exercise, the buyer of the option has the right to exercise all or less than all the unexercised notional amount of the underlying swap on one or more days in the exercise period, but on any such day may not exercise less than the minimum notional amount or more than the maximum notional amount, and if an integral multiple amount is specified, the notional exercised must be equal to or, be an integral multiple of, the integral multiple amount.

### 2.99.2 Contents:

**notionalReference** (zero or more occurrences; of the type ScheduleReference) A pointer style reference to the associated notional schedule defined elsewhere in the document. This element has been made optional as part of its integration in the OptionBaseExtended, because not required for the options on securities.

**integralMultipleAmount** (zero or one occurrence; of the type xsd:decimal) A notional amount which restricts the amount of notional that can be exercised when partial exercise or multiple exercise is applicable. The integral multiple amount defines a lower limit of notional that can be exercised and also defines a unit multiple of notional that can be exercised, i.e. only integer multiples of this amount can be exercised.

Either

**minimumNotionalAmount** (exactly one occurrence; of the type xsd:decimal) The minimum notional amount that can be exercised on a given exercise date. See multipleExercise.

Or

**minimumNumberOfOptions** (exactly one occurrence; of the type xsd:nonNegativeInteger)

Either

**maximumNotionalAmount** (exactly one occurrence; of the type xsd:decimal) The maximum notional amount that can be exercised on a given exercise date.

Or

**maximumNumberOfOptions** (exactly one occurrence; of the type xsd:nonNegativeInteger)

## 2.100 NotionalAmountReference

### 2.100.1 Description:

A reference to the notional amount.

### 2.100.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type Reference)

- The abstract base class for all types which define intra-document pointers.

### 2.100.3 Used by:

- Complex type: OptionBaseExtended
- Complex type: PercentageRule

### 2.100.4 Derived Types:

### 2.100.5 Figure:

### 2.100.6 Schema Fragment:

```
<xsd:complexType name="NotionalAmountReference">

</xsd:complexType>
```

## 2.101 Offset

### 2.101.1 Description:

A type defining an offset used in calculating a new date relative to a reference date. Currently, the only offsets defined are expected to be expressed as either calendar or business day offsets.

### 2.101.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type Interval)

- A type defining a time interval or offset, e.g. one day, three months. Used for specifying frequencies at which events occur, the tenor of a floating rate or an offset relative to another date.

**dayType** (zero or one occurrence; of the type DayTypeEnum) In the case of an offset specified as a number of days, this element defines whether consideration is given as to whether a day is a good business day or not. If a day type of business days is specified then non-business days are ignored when calculating the offset. The financial business centers to use for determination of business days are implied by the context in which this element is used. This element must only be included when the offset is specified as a number of days. If the offset is zero days then the dayType element should not be included.

### 2.101.3 Used by:

## 2.102 PartialExercise

### 2.102.1 Description:

A type defining partial exercise. As defined in the 2000 ISDA Definitions, Section 12.3 Partial Exercise, the buyer of the option may exercise all or less than all the notional amount of the underlying swap but may not be less than the minimum notional amount (if specified) and must be an integral multiple of the integral multiple amount if specified.

### 2.102.2 Contents:

**notionalReference** (zero or more occurrences; of the type ScheduleReference) A pointer style reference to the associated notional schedule defined elsewhere in the document. This element has been made optional as part of its integration in the OptionBaseExtended, because not required for the options on securities.

**integralMultipleAmount** (zero or one occurrence; of the type xsd:decimal) A notional amount which restricts the amount of notional that can be exercised when partial exercise or multiple exercise is applicable. The integral multiple amount defines a lower limit of notional that can be exercised and also defines a unit multiple of notional that can be exercised, i.e. only integer multiples of this amount can be exercised.

Either

**minimumNotionalAmount** (exactly one occurrence; of the type xsd:decimal) The minimum notional amount that can be exercised on a given exercise date. See multipleExercise.

Or

**minimumNumberOfOptions** (exactly one occurrence; of the type xsd:nonNegativeInteger)

### 2.102.3 Used by:

## 2.103 Party

### 2.103.1 Description:

A type defining a legal entity or a subdivision of a legal entity.

### 2.103.2 Contents:

**partyId** (one or more occurrences; of the type PartyId) A party identifier, e.g. a S.W.I.F.T. bank identifier code (BIC).

**partyName** (zero or one occurrence; of the type xsd:normalizedString) The name of the party. A free format string. FpML does not define usage rules for this element.

**account** (zero or more occurrences; of the type Account) Accounts serviced by this party. These are not accounts where this party is beneficiary, but instead where services are provided by this party to the beneficiary party.

## 2.108 Payment

### 2.108.1 Description:

A type for defining payments

### 2.108.2 Contents:

**payerPartyReference** (exactly one occurrence; of the type PartyOrAccountReference) A reference to the party responsible for making the payments defined by this structure.

**receiverPartyReference** (exactly one occurrence; of the type PartyOrAccountReference) A reference to the party that receives the payments corresponding to this structure.

**paymentAmount** (exactly one occurrence; of the type Money) The currency amount of the payment.

**paymentDate** (zero or one occurrence; of the type AdjustableDate) The payment date. This date is subject to adjustment in accordance with any applicable business day convention.

**adjustedPaymentDate** (zero or one occurrence; of the type IdentifiedDate) The adjusted payment date. This date should already be adjusted for any applicable business day convention. This component is not intended for use in trade confirmation but may be specified to allow the fee structure to also serve as a cashflow type component (all dates the the Cashflows type are adjusted payment dates).

**paymentType** (zero or one occurrence; of the type PaymentType) A classification of the type of fee or additional payment, e.g. brokerage, upfront fee etc. FpML does not define domain values for this element.

**settlementInformation** (zero or one occurrence; of the type SettlementInformation) The information required to settle a currency payment that results from a trade.

**discountFactor** (zero or one occurrence; of the type xsd:decimal) The value representing the discount factor used to calculate the present value of the cash flow.

**presentValueAmount** (zero or one occurrence; of the type Money) The amount representing the present value of the forecast payment.

</xsd:complexType>
```

## 2.111 PeriodicDates

### 2.111.1 Description:

### 2.111.2 Contents:

**calculationStartDate** (exactly one occurrence; of the type AdjustableOrRelativeDate)

**calculationEndDate** (zero or one occurrence; of the type AdjustableOrRelativeDate)

**calculationPeriodFrequency** (exactly one occurrence; of the type CalculationPeriodFrequency) The frequency at which calculation period end dates occur with the regular part of the calculation period schedule and their roll date convention.

**calculationPeriodDatesAdjustments** (exactly one occurrence; of the type BusinessDayAdjustments) The business day convention to apply to each calculation period end date if it would otherwise fall on a day that is not a business day in the specified financial business centers.

### 2.111.3 Used by:

- Complex type: AdjustableRelativeOrPeriodicDates

### 2.111.4 Derived Types:

### 2.111.5 Figure:

### 2.111.6 Schema Fragment:

```

## 2.112 PricingStructure

### 2.112.1 Description:

An abstract pricing structure base type. Used as a base for structures such as yield curves and volatility matrices..

### 2.112.2 Contents:

**name** (zero or one occurrence; of the type xsd:normalizedString) The name of the structure, e.g "USDLIBOR-3M EOD Curve".

**currency** (zero or one occurrence; of the type Currency) The currency that the structure is expressed in (this is relevant mostly for the Interes Rates asset class).

### 2.112.3 Used by:

- Element: pricingStructure
- Complex type: CreditCurve
- Complex type: FxCurve
- Complex type: VolatilityRepresentation
- Complex type: YieldCurve

### 2.112.4 Derived Types:

- Complex type: CreditCurve
- Complex type: FxCurve
- Complex type: VolatilityRepresentation
- Complex type: YieldCurve

  </xsd:complexContent>
</xsd:complexType>
```

## 2.114 PrincipalExchanges

### 2.114.1 Description:

A type defining which principal exchanges occur for the stream.

### 2.114.2 Contents:

**initialExchange** (exactly one occurrence; of the type xsd:boolean) A true/false flag to indicate whether there is an initial exchange of principal on the effective date.

**finalExchange** (exactly one occurrence; of the type xsd:boolean) A true/false flag to indicate whether there is a final exchange of principal on the termination date.

**intermediateExchange** (exactly one occurrence; of the type xsd:boolean) A true/false flag to indicate whether there are intermediate or interim exchanges of principal during the term of the swap.

### 2.114.3 Used by:

- Complex type: InterestRateStream
- Complex type: PrincipalExchangeFeatures

### 2.114.4 Derived Types:

### 2.114.5 Figure:

### 2.114.6 Schema Fragment:

```

## 2.115 Product

### 2.115.1 Description:

The base type which all FpML products extend.

### 2.115.2 Contents:

**productType** (zero or more occurrences; of the type ProductType) A classification of the type of product. FpML defines a simple product categorization using a coding scheme.

**productId** (zero or more occurrences; of the type ProductId) A product reference identifier allocated by a party. FpML does not define the domain values associated with this element. Note that the domain values for this element are not strictly an enumerated list.

### 2.115.3 Used by:

- Element: product
- Complex type: BulletPayment
- Complex type: CapFloor
- Complex type: CreditDefaultSwap
- Complex type: DealIdentifier
- Complex type: DividendSwapTransactionSupplement
- Complex type: EquityDerivativeBase
- Complex type: FacilityIdentifier
- Complex type: Fra
- Complex type: FxAverageRateOption
- Complex type: FxDigitalOption
- Complex type: FxLeg
- Complex type: FxOptionLeg
- Complex type: FxSwap
- Complex type: NettedSwapBase
- Complex type: OptionBase
- Complex type: ReturnSwapBase
- Complex type: Strategy
- Complex type: Swap
- Complex type: Swaption
- Complex type: TermDeposit

### 2.115.4 Derived Types:

- Complex type: BulletPayment
- Complex type: CapFloor
- Complex type: CreditDefaultSwap
- Complex type: DealIdentifier
- Complex type: DividendSwapTransactionSupplement
- Complex type: EquityDerivativeBase
- Complex type: FacilityIdentifier
- Complex type: Fra
- Complex type: FxAverageRateOption
- Complex type: FxDigitalOption
- Complex type: FxLeg
- Complex type: FxOptionLeg
- Complex type: FxSwap
- Complex type: NettedSwapBase

- Complex type: OptionBase
- Complex type: ReturnSwapBase
- Complex type: Strategy
- Complex type: Swap
- Complex type: Swaption
- Complex type: TermDeposit

### **2.115.5 Figure:**

    </xsd:extension>  
  </xsd:simpleContent>  
</xsd:complexType>
```

## 2.119 QuotedCurrencyPair

### 2.119.1 Description:

A type that describes the composition of a rate that has been quoted or is to be quoted. This includes the two currencies and the quotation relationship between the two currencies and is used as a building block throughout the FX specification.

### 2.119.2 Contents:

**currency1** (exactly one occurrence; of the type Currency) The first currency specified when a pair of currencies is to be evaluated.

**currency2** (exactly one occurrence; of the type Currency) The second currency specified when a pair of currencies is to be evaluated.

**quoteBasis** (exactly one occurrence; of the type QuoteBasisEnum) The method by which the exchange rate is quoted.

### 2.119.3 Used by:

- Complex type: FxAmericanTrigger
- Complex type: FxBarrier
- Complex type: FxDigitalOption
- Complex type: FxEuropeanTrigger
- Complex type: FxFixing
- Complex type: FxRate
- Complex type: FxRateAsset
- Complex type: QuotableFxRate

### 2.119.4 Derived Types:

## 2.120 Rate

### 2.120.1 Description:

The abstract base class for all types which define interest rate streams.

### 2.120.2 Contents:

### 2.120.3 Used by:

- Element: rateCalculation
- Complex type: FloatingRate

### 2.120.4 Derived Types:

- Complex type: FloatingRate

### 2.120.5 Figure:

### 2.120.6 Schema Fragment:

```
<xsd:complexType name="Rate" abstract="true">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">

      streams.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:attribute name="id" type="xsd:ID"/>
</xsd:complexType>
```

## 2.121 RateObservation

### 2.121.1 Description:

A type defining parameters associated with an individual observation or fixing. This type forms part of the cashflow representation of a stream.

### 2.121.2 Contents:

**resetDate** (zero or one occurrence; of the type xsd:date) The reset date.

**adjustedFixingDate** (zero or one occurrence; of the type xsd:date) The adjusted fixing date, i.e. the actual date the rate is observed. The date should already be adjusted for any applicable business day convention.

**observedRate** (zero or one occurrence; of the type xsd:decimal) The actual observed rate before any required rate treatment is applied, e.g. before converting a rate quoted on a discount basis to an equivalent yield. An observed rate of 5% would be represented as 0.05.

**treatedRate** (zero or one occurrence; of the type xsd:decimal) The observed rate after any required rate treatment is applied. A treated rate of 5% would be represented as 0.05.

**observationWeight** (exactly one occurrence; of the type xsd:positiveInteger) The number of days weighting to be associated with the rate observation, i.e. the number of days such rate is in effect. This is applicable in the case of a weighted average method of calculation where more than one reset date is established for a single calculation period.

**rateReference** (zero or one occurrence; of the type RateReference) A pointer style reference to a floating rate component defined as part of a stub calculation period amount component. It is only required when it is necessary to distinguish two rate observations for the same fixing date which could occur when linear interpolation of two different rates occurs for a stub calculation period.

**forecastRate** (zero or one occurrence; of the type xsd:decimal) The value representing the forecast rate used to calculate the forecast future value of the accrual period. A value of 1% should be represented as 0.01

**treatedForecastRate** (zero or one occurrence; of the type xsd:decimal) The value representing the forecast rate after applying rate treatment rules. A value of 1% should be represented as 0.01

### 2.121.3 Used by:

      pointers.
    </xsd:documentation>
  </xsd:annotation>
</xsd:complexType>

```

## 2.125 ReferenceAmount

### 2.125.1 Description:

Specifies the reference amount using a scheme.

### 2.125.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type xsd:normalizedString)

•

### 2.125.3 Used by:

- Complex type: LegAmount

### 2.125.4 Derived Types:

### 2.125.5 Figure:

### 2.125.6 Schema Fragment:

```
<xsd:complexType name="ReferenceAmount">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      Specifies the reference amount using a scheme.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:simpleContent>
    <xsd:extension base="xsd:normalizedString">
      <xsd:attribute name="referenceAmountScheme" type="xsd:anyURI" />
    </xsd:extension>
  </xsd:simpleContent>
</xsd:complexType>
```

## 2.126 ReferenceBank

### 2.126.1 Description:

A type to describe an institution (party) identified by means of a coding scheme and an optional name.

### 2.126.2 Contents:

**referenceBankId** (exactly one occurrence; of the type ReferenceBankId) An institution (party) identifier, e.g. a bank identifier code (BIC).

**referenceBankName** (zero or one occurrence; of the type xsd:string) The name of the institution (party). A free format string. FpML does not define usage rules for the element.

### 2.126.3 Used by:

- Complex type: CashSettlementReferenceBanks

### 2.126.4 Derived Types:

### 2.126.5 Figure:

    </xsd:extension>
  </xsd:simpleContent>
</xsd:complexType>
```

## 2.128 RelativeDateOffset

### 2.128.1 Description:

A type defining a date (referred to as the derived date) as a relative offset from another date (referred to as the anchor date). If the anchor date is itself an adjustable date then the offset is assumed to be calculated from the adjusted anchor date. A number of different scenarios can be supported, namely; 1) the derived date may simply be a number of calendar periods (days, weeks, months or years) preceding or following the anchor date; 2) the unadjusted derived date may be a number of calendar periods(days, weeks, months or years) preceding or following the anchor date with the resulting unadjusted derived date subject to adjustment in accordance with a specified business day convention, i.e. the derived date must fall on a good business day; 3) the derived date may be a number of business days preceding or following the anchor date. Note that the businessDayConvention specifies any required adjustment to the unadjusted derived date. A negative or positive value in the periodMultiplier indicates whether the unadjusted derived precedes or follows the anchor date. The businessDayConvention should contain a value NONE if the day type element contains a value of Business (since specifying a negative or positive business days offset would already guarantee that the derived date would fall on a good business day in the specified business centers).

### 2.128.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type Offset)

- A type defining an offset used in calculating a new date relative to a reference date. Currently, the only offsets defined are expected to be expressed as either calendar or business day offsets.

**businessDayConvention** (exactly one occurrence; of the type BusinessDayConventionEnum) The convention for adjusting a date if it would otherwise fall on a day that is not a business day.

Either

**businessCentersReference** (exactly one occurrence; of the type BusinessCentersReference) A pointer style reference to a set of financial business centers defined elsewhere in the document. This set of business centers is used to determine whether a particular day is a business day or not.

Or

**businessCenters** (exactly one occurrence; of the type BusinessCenters)

**dateRelativeTo** (exactly one occurrence; of the type DateReference) Specifies the anchor as an href attribute. The href attribute value is a pointer style reference to the element or component elsewhere in the document where the anchor date is defined.

### 2.128.3 Used by:

- Complex type: AdjustedRelativeDateOffset
- Complex type: RelativeDates
- Complex type: AdjustableDatesOrRelativeDateOffset
- Complex type: AdjustableOrRelativeDate
- Complex type: CalculationPeriodDates
- Complex type: CashSettlement
- Complex type: CashSettlementPaymentDate

      </xsd:sequence>
    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>

```

## 2.129 RelativeDates

### 2.129.1 Description:

A type describing a set of dates defined as relative to another set of dates.

### 2.129.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type `RelativeDateOffset`)

- A type defining a date (referred to as the derived date) as a relative offset from another date (referred to as the anchor date). If the anchor date is itself an adjustable date then the offset is assumed to be calculated from the adjusted anchor date. A number of different scenarios can be supported, namely; 1) the derived date may simply be a number of calendar periods (days, weeks, months or years) preceding or following the anchor date; 2) the unadjusted derived date may be a number of calendar periods(days, weeks, months or years) preceding or following the anchor date with the resulting unadjusted derived date subject to adjustment in accordance with a specified business day convention, i.e. the derived date must fall on a good business day; 3) the derived date may be a number of business days preceding or following the anchor date. Note that the `businessDayConvention` specifies any required adjustment to the unadjusted derived date. A negative or positive value in the `periodMultiplier` indicates whether the unadjusted derived precedes or follows the anchor date. The `businessDayConvention` should contain a value `NONE` if the day type element contains a value of `Business` (since specifying a negative or positive business days offset would already guarantee that the derived date would fall on a good business day in the specified business centers).

**periodSkip** (zero or one occurrence; of the type `xsd:positiveInteger`) The number of periods in the referenced date schedule that are between each date in the relative date schedule. Thus a skip of 2 would mean that dates are relative to every second date in the referenced schedule. If present this should have a value greater than 1.

**scheduleBounds** (zero or one occurrence; of the type `DateRange`) The first and last dates of a schedule. This can be used to restrict the range of values in a reference series of dates.

### 2.129.3 Used by:

- Complex type: `AdjustableOrRelativeDates`

### 2.129.4 Derived Types:

## 2.130 RelativeDateSequence

### 2.130.1 Description:

A type describing a date when this date is defined in reference to another date through one or several date offsets.

### 2.130.2 Contents:

**dateRelativeTo** (exactly one occurrence; of the type DateReference) Specifies the anchor as an href attribute. The href attribute value is a pointer style reference to the element or component elsewhere in the document where the anchor date is defined.

**dateOffset** (one or more occurrences; of the type DateOffset)

Either

**businessCentersReference** (exactly one occurrence; of the type BusinessCentersReference) A pointer style reference to a set of financial business centers defined elsewhere in the document. This set of business centers is used to determine whether a particular day is a business day or not.

Or

**businessCenters** (exactly one occurrence; of the type BusinessCenters)

### 2.130.3 Used by:

      <xsd:attribute name="id" type="xsd:ID" use="required"/>
    </xsd:extension>
  </xsd:simpleContent>
</xsd:complexType>
```

## 2.132 ResetFrequency

### 2.132.1 Description:

A type defining the reset frequency. In the case of a weekly reset, also specifies the day of the week that the reset occurs. If the reset frequency is greater than the calculation period frequency this implies that more or more reset dates is established for each calculation period and some form of rate averaging is applicable. The specific averaging method of calculation is specified in FloatingRateCalculation.

### 2.132.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type Interval)

- A type defining a time interval or offset, e.g. one day, three months. Used for specifying frequencies at which events occur, the tenor of a floating rate or an offset relative to another date.

**weeklyRollConvention** (zero or one occurrence; of the type WeeklyRollConventionEnum) The day of the week on which a weekly reset date occurs. This element must be included if the reset frequency is defined as weekly and not otherwise.

### 2.132.3 Used by:

- Complex type: InterestLegResetDates
- Complex type: ResetDates

### 2.132.4 Derived Types:

### 2.132.5 Figure:

### 2.132.6 Schema Fragment:

```
<xsd:complexType name="ResetFrequency">

      </xsd:sequence>
    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

## 2.133 Rounding

### 2.133.1 Description:

A type defining a rounding direction and precision to be used in the rounding of a rate.

### 2.133.2 Contents:

**roundingDirection** (exactly one occurrence; of the type RoundingDirectionEnum) Specifies the rounding direction.

**precision** (exactly one occurrence; of the type xsd:nonNegativeInteger) Specifies the rounding precision in terms of a number of decimal places. Note how a percentage rate rounding of 5 decimal places is expressed as a rounding precision of 7 in the FpML document since the percentage is expressed as a decimal, e.g. 9.876543% (or 0.09876543) being rounded to the nearest 5 decimal places is 9.87654% (or 0.0987654).

### 2.133.3 Used by:

    </xsd:element>
  </xsd:sequence>
</xsd:complexType>
```

## 2.134 Routing

### 2.134.1 Description:

A type that provides three alternative ways of identifying a party involved in the routing of a payment. The identification may use payment system identifiers only; actual name, address and other reference information; or a combination of both.

### 2.134.2 Contents:

Either

**routingIds** (exactly one occurrence; of the type RoutingIds) A set of unique identifiers for a party, each one identifying the party within a payment system. The assumption is that each party will not have more than one identifier within the same payment system.

Or

**routingExplicitDetails** (exactly one occurrence; of the type RoutingExplicitDetails) A set of details that is used to identify a party involved in the routing of a payment when the party does not have a code that identifies it within one of the recognized payment systems.

Or

**routingIdsAndExplicitDetails** (exactly one occurrence; of the type RoutingIdsAndExplicitDetails) A combination of coded payment system identifiers and details for physical addressing for a party involved in the routing of a payment.

### 2.134.3 Used by:

- Complex type: SplitSettlement

### 2.134.4 Derived Types:

### 2.134.5 Figure:

</xsd:complexType>
```

## 2.135 RoutingExplicitDetails

### 2.135.1 Description:

A type that models name, address and supplementary textual information for the purposes of identifying a party involved in the routing of a payment.

### 2.135.2 Contents:

**routingName** (exactly one occurrence; of the type xsd:string) A real name that is used to identify a party involved in the routing of a payment.

**routingAddress** (zero or one occurrence; of the type Address) A physical postal address via which a payment can be routed.

**routingAccountNumber** (zero or one occurrence; of the type xsd:string) An account number via which a payment can be routed.

**routingReferenceText** (zero or more occurrences; of the type xsd:string) A piece of free-format text used to assist the identification of a party involved in the routing of a payment.

### 2.135.3 Used by:

### 2.135.4 Derived Types:

  </xsd:simpleContent>
</xsd:complexType>
```

## 2.137 RoutingIds

### 2.137.1 Description:

A type that provides for identifying a party involved in the routing of a payment by means of one or more standard identification codes. For example, both a SWIFT BIC code and a national bank identifier may be required.

### 2.137.2 Contents:

**routingId** (one or more occurrences; of the type RoutingId) A unique identifier for party that is a participant in a recognized payment system.

### 2.137.3 Used by:

- Complex type: RoutingIdsAndExplicitDetails

### 2.137.4 Derived Types:

### 2.137.5 Figure:

## 2.138 RoutingIdsAndExplicitDetails

### 2.138.1 Description:

A type that provides a combination of payment system identification codes with physical postal address details, for the purposes of identifying a party involved in the routing of a payment.

### 2.138.2 Contents:

**routingIds** (one or more occurrences; of the type RoutingIds) A set of unique identifiers for a party, eachone identifying the party within a payment system. The assumption is that each party will not have more than one identifier within the same payment system.

**routingName** (exactly one occurrence; of the type xsd:string) A real name that is used to identify a party involved in the routing of a payment.

**routingAddress** (zero or one occurrence; of the type Address) A physical postal address via which a payment can be routed.

**routingAccountNumber** (zero or one occurrence; of the type xsd:string) An account number via which a payment can be routed.

**routingReferenceText** (zero or more occurrences; of the type xsd:string) A piece of free-format text used to assist the identification of a party involved in the routing of a payment.

## 2.139 Schedule

### 2.139.1 Description:

A type defining a schedule of rates or amounts in terms of an initial value and then a series of step date and value pairs. On each step date the rate or amount changes to the new step value. The series of step date and value pairs are optional. If not specified, this implies that the initial value remains unchanged over time.

### 2.139.2 Contents:

**initialValue** (exactly one occurrence; of the type xsd:decimal) The initial rate or amount, as the case may be. An initial rate of 5% would be represented as 0.05.

**step** (zero or more occurrences; of the type Step) The schedule of step date and value pairs. On each step date the associated step value becomes effective. A list of steps may be ordered in the document by ascending step date. An FpML document containing an unordered list of steps is still regarded as a conformant document.

### 2.139.3 Used by:

- Complex type: AmountSchedule
- Complex type: SpreadSchedule
- Complex type: StrikeSchedule
- Complex type: Calculation
- Complex type: ExerciseFeeSchedule
- Complex type: FloatingRate
- Complex type: TradeUnderlyer

### 2.139.4 Derived Types:

## 2.141 SettlementInformation

### 2.141.1 Description:

A type that represents the choice of methods for settling a potential currency payment resulting from a trade: by means of a standard settlement instruction, by netting it out with other payments, or with an explicit settlement instruction.

### 2.141.2 Contents:

Either

**standardSettlementStyle** (exactly one occurrence; of the type StandardSettlementStyleEnum) An optional element used to describe how a trade will settle. This defines a scheme and is used for identifying trades that are identified as settling standard and/or flagged for settlement netting.

Or

**settlementInstruction** (exactly one occurrence; of the type SettlementInstruction) An explicit specification of how a currency payment is to be made, when the payment is not netted and the route is other than the recipient's standard settlement instruction.

### 2.141.3 Used by:

- Complex type: FxOptionPayout
- Complex type: FxOptionPremium
- Complex type: Payment

### 2.141.4 Derived Types:

## 2.142 SettlementInstruction

### 2.142.1 Description:

A type that models a complete instruction for settling a currency payment, including the settlement method to be used, the correspondent bank, any intermediary banks and the ultimate beneficiary.

### 2.142.2 Contents:

**settlementMethod** (zero or one occurrence; of the type SettlementMethod) The mechanism by which settlement is to be made. The scheme of domain values will include standard mechanisms such as CLS, Fedwire, Chips ABA, Chips UID, SWIFT, CHAPS and DDA.

**correspondentInformation** (zero or one occurrence; of the type CorrespondentInformation) The information required to identify the correspondent bank that will make delivery of the funds on the paying bank's behalf in the country where the payment is to be made

**intermediaryInformation** (zero or more occurrences; of the type IntermediaryInformation) Information to identify an intermediary through which payment will be made by the correspondent bank to the ultimate beneficiary of the funds.

**beneficiaryBank** (zero or one occurrence; of the type Beneficiary) The bank that acts for the ultimate beneficiary of the funds in receiving payments.

**beneficiary** (exactly one occurrence; of the type Beneficiary) The ultimate beneficiary of the funds. The beneficiary can be identified either by an account at the beneficiaryBank (qv) or by explicit routingInformation. This element provides for the latter.

**depositoryPartyReference** (zero or one occurrence; of the type PartyReference) Reference to the depository of the settlement.

**splitSettlement** (zero or more occurrences; of the type SplitSettlement) The set of individual payments that are to be made when a currency payment settling a trade needs to be split between a number of ultimate beneficiaries. Each split payment may need to have its own routing information.

## 2.145 SettlementRateSource

### 2.145.1 Description:

A type describing the method for obtaining a settlement rate.

### 2.145.2 Contents:

Either

**informationSource** (exactly one occurrence; of the type InformationSource) The information source where a published or displayed market rate will be obtained, e.g. Telerate Page 3750.

Or

**cashSettlementReferenceBanks** (exactly one occurrence; of the type CashSettlementReferenceBanks) A container for a set of reference institutions. These reference institutions may be called upon to provide rate quotations as part of the method to determine the applicable cash settlement amount. If institutions are not specified, it is assumed that reference institutions will be agreed between the parties on the exercise date, or in the case of swap transaction to which mandatory early termination is applicable, the cash settlement valuation date.

## 2.146 SharedAmericanExercise

### 2.146.1 Description:

TBA

### 2.146.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type Exercise)

- The abstract base class for all types which define way in which options may be exercised.

**commencementDate** (exactly one occurrence; of the type AdjustableOrRelativeDate) The first day of the exercise period for an American style option.

**expirationDate** (exactly one occurrence; of the type AdjustableOrRelativeDate) The last day within an exercise period for an American style option. For a European style option it is the only day within the exercise period.

**latestExerciseTime** (zero or one occurrence; of the type BusinessCenterTime) For a Bermuda or American style option, the latest time on an exercise business day (excluding the expiration date) within the exercise period that notice can be given by the buyer to the seller or seller's agent. Notice of exercise given after this time will be deemed to have been given on the next exercise business day.

      </xsd:sequence>
    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

## 2.150 SpreadScheduleReference

### 2.150.1 Description:

Provides a reference to a spread schedule.

### 2.150.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type Reference)

- The abstract base class for all types which define intra-document pointers.

### 2.150.3 Used by:

- Complex type: BasketConstituent

### 2.150.4 Derived Types:

### 2.150.5 Figure:

### 2.150.6 Schema Fragment:

```
<xsd:complexType name="SpreadScheduleReference">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      Provides a reference to a spread schedule.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:complexContent>
    <xsd:extension base="Reference">
      <xsd:attribute name="href" type="xsd:IDREF" use="required" ecore:reference="SpreadScheduleReference"/>
    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

## 2.151 SpreadScheduleType

### 2.151.1 Description:

Defines a Spread Type Scheme to identify a long or short spread value.

### 2.151.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type xsd:normalizedString)

•

### 2.151.3 Used by:

- Complex type: SpreadSchedule

### 2.151.4 Derived Types:

### 2.151.5 Figure:

### 2.151.6 Schema Fragment:

```
<xsd:complexType name="SpreadScheduleType">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      Defines a Spread Type Scheme to identify a long or short spread
      value.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:simpleContent>
    <xsd:extension base="xsd:normalizedString">
      <xsd:attribute name="spreadScheduleTypeScheme" type="xsd:anyURI" default="http://www.fpm1
    </xsd:extension>
  </xsd:simpleContent>
</xsd:complexType>
```

## 2.152 Step

### 2.152.1 Description:

A type defining a step date and step value pair. This step definitions are used to define varying rate or amount schedules, e.g. a notional amortization or a step-up coupon schedule.

### 2.152.2 Contents:

**stepDate** (exactly one occurrence; of the type xsd:date) The date on which the associated stepValue becomes effective. This day may be subject to adjustment in accordance with a business day convention.

**stepValue** (exactly one occurrence; of the type xsd:decimal) The rate or amount which becomes effective on the associated stepDate. A rate of 5% would be represented as 0.05.

### 2.152.3 Used by:

- Complex type: CalculationAmount
- Complex type: Schedule

### 2.152.4 Derived Types:

### 2.152.5 Figure:

### 2.152.6 Schema Fragment:

```
<xsd:complexType name="Step">

  </xsd:sequence>
  <xsd:attribute name="id" type="xsd:ID"/>
</xsd:complexType>
```

## 2.153 StreetAddress

### 2.153.1 Description:

A type that describes the set of street and building number information that identifies a postal address within a city.

### 2.153.2 Contents:

**streetLine** (one or more occurrences; of the type xsd:string) An individual line of street and building number information, forming part of a postal address.

### 2.153.3 Used by:

- Complex type: Address

### 2.153.4 Derived Types:

### 2.153.5 Figure:

### 2.153.6 Schema Fragment:

          forming part of a postal address.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
  </xsd:sequence>
</xsd:complexType>
```

## 2.154 Strike

### 2.154.1 Description:

A type describing a single cap or floor rate.

### 2.154.2 Contents:

**strikeRate** (exactly one occurrence; of the type xsd:decimal) The rate for a cap or floor.

**buyer** (zero or one occurrence; of the type IdentifiedPayerReceiver) The buyer of the option

**seller** (zero or one occurrence; of the type IdentifiedPayerReceiver) The party that has sold.

### 2.154.3 Used by:

- Complex type: CashflowFixing
- Complex type: FloatingRateDefinition

### 2.154.4 Derived Types:

### 2.154.5 Figure:

### 2.154.6 Schema Fragment:

```
<xsd:complexType name="Strike">
  <xsd:annotation>

  </xsd:sequence>
  <xsd:attribute name="id" type="xsd:ID"/>
</xsd:complexType>
```

## 2.155 StrikeSchedule

### 2.155.1 Description:

A type describing a schedule of cap or floor rates.

### 2.155.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type Schedule)

- A type defining a schedule of rates or amounts in terms of an initial value and then a series of step date and value pairs. On each step date the rate or amount changes to the new step value. The series of step date and value pairs are optional. If not specified, this implies that the initial value remains unchanged over time.

**buyer** (zero or one occurrence; of the type IdentifiedPayerReceiver) The buyer of the option

**seller** (zero or one occurrence; of the type IdentifiedPayerReceiver) The party that has sold.

### 2.155.3 Used by:

- Complex type: FloatingRate

### 2.155.4 Derived Types:

### 2.155.5 Figure:

### 2.155.6 Schema Fragment:

```
<xsd:complexType name="StrikeSchedule">

      </xsd:sequence>
    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

## 2.156 Stub

### 2.156.1 Description:

A type defining how a stub calculation period amount is calculated and the start and end date of the stub. A single floating rate tenor different to that used for the regular part of the calculation periods schedule may be specified, or two floating rate tenors may be specified. If two floating rate tenors are specified then Linear Interpolation (in accordance with the 2000 ISDA Definitions, Section 8.3 Interpolation) is assumed to apply. Alternatively, an actual known stub rate or stub amount may be specified.

### 2.156.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type StubValue)

- A type defining how a stub calculation period amount is calculated. A single floating rate tenor different to that used for the regular part of the calculation periods schedule may be specified, or two floating rate tenors may be specified. If two floating rate tenors are specified then Linear Interpolation (in accordance with the 2000 ISDA Definitions, Section 8.3 Interpolation) is assumed to apply. Alternatively, an actual known stub rate or stub amount may be specified.

**stubStartDate** (zero or one occurrence; of the type AdjustableOrRelativeDate) Start date of stub period. This was created to support use of the InterestRateStream within the Equity Derivative sphere, and this element is not expected to be produced in the representation of Interest Rate products.

**stubEndDate** (zero or one occurrence; of the type AdjustableOrRelativeDate) End date of stub period. This was created to support use of the InterestRateStream within the Equity Derivative sphere, and this element is not expected to be produced in the representation of Interest Rate products.

### 2.156.3 Used by:

- Complex type: StubCalculationPeriod

### 2.156.4 Derived Types:

</xsd:complexContent>  
</xsd:complexType>
```

## 2.157 StubValue

### 2.157.1 Description:

A type defining how a stub calculation period amount is calculated. A single floating rate tenor different to that used for the regular part of the calculation periods schedule may be specified, or two floating rate tenors may be specified. If two floating rate tenors are specified then Linear Interpolation (in accordance with the 2000 ISDA Definitions, Section 8.3 Interpolation) is assumed to apply. Alternatively, an actual known stub rate or stub amount may be specified.

### 2.157.2 Contents:

Either

**floatingRate** (exactly one occurrence; of the type FloatingRate) The rates to be applied to the initial or final stub may be the linear interpolation of two different rates. While the majority of the time, the rate indices will be the same as that specified in the stream and only the tenor itself will be different, it is possible to specify two different rates. For example, a 2 month stub period may use the linear interpolation of a 1 month and 3 month rate. The different rates would be specified in this component. Note that a maximum of two rates can be specified. If a stub period uses the same floating rate index, including tenor, as the regular calculation periods then this should not be specified again within this component, i.e. the stub calculation period amount component may not need to be specified even if there is an initial or final stub period. If a stub period uses a different floating rate index compared to the regular calculation periods then this should be specified within this component. If specified here, they are likely to have id attributes, allowing them to be referenced from within the cashflows component.

Or

**stubRate** (exactly one occurrence; of the type xsd:decimal) An actual rate to apply for the initial or final stub period may have been agreed between the principal parties (in a similar way to how an initial rate may have been agreed for the first regular period). If an actual stub rate has been agreed then it would be included in this component. It will be a per annum rate, expressed as a decimal. A stub rate of 5% would be represented as 0.05.

Or

**stubAmount** (exactly one occurrence; of the type Money) An actual amount to apply for the initial or final stub period may have been agreed between the two parties. If an actual stub amount has been agreed then it would be included in this component.

## ***4 Groups***

## 4.1 BusinessCentersOrReference.model

### 4.1.1 Description:

### 4.1.2 Contents:

Either

**businessCentersReference** (exactly one occurrence; of the type BusinessCentersReference) A pointer style reference to a set of financial business centers defined elsewhere in the document. This set of business centers is used to determine whether a particular day is a business day or not.

Or

**businessCenters** (exactly one occurrence; of the type BusinessCenters)

### 4.1.3 Used by:

- Complex type: BusinessDateRange
- Complex type: BusinessDayAdjustments
- Complex type: FxFixingDate
- Complex type: RelativeDateOffset
- Complex type: RelativeDateSequence

### 4.1.4 Figure:

### 4.1.5 Schema Fragment:

  </xsd:choice>
</xsd:group>
```

## 4.2 BuyerSeller.model

### 4.2.1 Description:

### 4.2.2 Contents:

**buyerPartyReference** (exactly one occurrence; of the type PartyOrTradeSideReference) A reference to the party that buys this instrument, ie. pays for this instrument and receives the rights defined by it. See 2000 ISDA definitions Article 11.1 (b). In the case of FRAs this the fixed rate payer.

**sellerPartyReference** (exactly one occurrence; of the type PartyOrTradeSideReference) A reference to the party that sells ("writes") this instrument, i.e. that grants the rights defined by this instrument and in return receives a payment for it. See 2000 ISDA definitions Article 11.1 (a). In the case of FRAs this is the floating rate payer.

### 4.2.3 Used by:

- Complex type: CancelableProvision
- Complex type: EquityDerivativeBase
- Complex type: ExtendibleProvision
- Complex type: Fra
- Complex type: FxAverageRateOption
- Complex type: FxDigitalOption
- Complex type: FxOptionLeg
- Complex type: OptionBase
- Complex type: ReturnSwapBase
- Complex type: SinglePartyOption
- Complex type: Swaption

## 4.3 FloatingRateIndex.model

### 4.3.1 Description:

### 4.3.2 Contents:

**floatingRateIndex** (exactly one occurrence; of the type FloatingRateIndex)

**indexTenor** (zero or one occurrence; of the type Interval) The ISDA Designated Maturity, i.e. the tenor of the floating rate.

### 4.3.3 Used by:

- Complex type: FloatingRate
- Complex type: InterestRatePeriod
- Complex type: SwapCurveValuation

### 4.3.4 Figure:

### 4.3.5 Schema Fragment:

```
<xsd:group name="FloatingRateIndex.model">
  <xsd:sequence>
    <xsd:element name="floatingRateIndex" type="FloatingRateIndex"/>
    <xsd:element name="indexTenor" type="Interval" minOccurs="0">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          The ISDA Designated Maturity, i.e. the tenor of the floating
          rate.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
  </xsd:sequence>
</xsd:group>
```

## 4.4 PartialExercise.model

### 4.4.1 Description:

### 4.4.2 Contents:

**notionalReference** (zero or more occurrences; of the type ScheduleReference) A pointer style reference to the associated notional schedule defined elsewhere in the document. This element has been made optional as part of its integration in the OptionBaseExtended, because not required for the options on securities.

**integralMultipleAmount** (zero or one occurrence; of the type xsd:decimal) A notional amount which restricts the amount of notional that can be exercised when partial exercise or multiple exercise is applicable. The integral multiple amount defines a lower limit of notional that can be exercised and also defines a unit multiple of notional that can be exercised, i.e. only integer multiples of this amount can be exercised.

Either

**minimumNotionalAmount** (exactly one occurrence; of the type xsd:decimal) The minimum notional amount that can be exercised on a given exercise date. See multipleExercise.

Or

**minimumNumberOfOptions** (exactly one occurrence; of the type xsd:nonNegativeInteger)

### 4.4.3 Used by:

- Complex type: MultipleExercise
- Complex type: PartialExercise

### 4.4.4 Figure:

### 4.4.5 Schema Fragment:

```

```
</xsd:sequence>  
</xsd:group>
```

## 4.5 PayerReceiver.model

### 4.5.1 Description:

### 4.5.2 Contents:

**payerPartyReference** (exactly one occurrence; of the type PartyOrAccountReference) A reference to the party responsible for making the payments defined by this structure.

**receiverPartyReference** (exactly one occurrence; of the type PartyOrAccountReference) A reference to the party that receives the payments corresponding to this structure.

### 4.5.3 Used by:

- Complex type: DirectionalLeg
- Complex type: EquityPremium
- Complex type: ExerciseFee
- Complex type: ExerciseFeeSchedule
- Complex type: FeaturePayment
- Complex type: FxOptionPremium
- Complex type: GrossCashflow
- Complex type: IndependentAmount
- Complex type: InitialPayment
- Complex type: InterestRateStream
- Complex type: PassThroughItem
- Complex type: Payment
- Complex type: PaymentMatching
- Complex type: PrePayment
- Complex type: PrincipalExchangeDescriptions
- Complex type: QuotablePayment
- Complex type: ReturnSwapAdditionalPayment
- Complex type: ReturnSwapLeg
- Complex type: SimplePayment

### 4.5.4 Figure:

        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
  </xsd:sequence>
</xsd:group>
```

## 4.6 PaymentDiscounting.model

### 4.6.1 Description:

### 4.6.2 Contents:

**discountFactor** (zero or one occurrence; of the type xsd:decimal) The value representing the discount factor used to calculate the present value of the cash flow.

**presentValueAmount** (zero or one occurrence; of the type Money) The amount representing the present value of the forecast payment.

### 4.6.3 Used by:

- Complex type: Premium

### 4.6.4 Figure:

### 4.6.5 Schema Fragment:

```
<xsd:group name="PaymentDiscounting.model">
  <xsd:annotation>
    <xsd:documentation>
      A model group for representing the discounting elements that can
      be associated with a payment.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:sequence>
    <xsd:element name="discountFactor" type="xsd:decimal" minOccurs="0">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">

          the present value of the cash flow.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
    <xsd:element name="presentValueAmount" type="Money" minOccurs="0">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          The amount representing the present value of the forecast
          payment.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
  </xsd:sequence>
</xsd:group>
```

## 4.7 Premium.model

### 4.7.1 Description:

### 4.7.2 Contents:

**premiumType** (zero or one occurrence; of the type PremiumTypeEnum) Forward start Premium type

**pricePerOption** (zero or one occurrence; of the type Money) The amount of premium to be paid expressed as a function of the number of options.

**percentageOfNotional** (zero or one occurrence; of the type xsd:decimal) The amount of premium to be paid expressed as a percentage of the notional value of the transaction. A percentage of 5% would be expressed as 0.05.

### 4.7.3 Used by:

- Complex type: Premium

### 4.7.4 Figure:

### 4.7.5 Schema Fragment:

```
<xsd:group name="Premium.model">
  <xsd:annotation>
    <xsd:documentation>

      </xsd:annotation>
    </xsd:element>
  </xsd:sequence>
</xsd:group>
```

## 4.8 Product.model

### 4.8.1 Description:

### 4.8.2 Contents:

**productType** (zero or more occurrences; of the type ProductType) A classification of the type of product. FpML defines a simple product categorization using a coding scheme.

**productId** (zero or more occurrences; of the type ProductId) A product reference identifier allocated by a party. FpML does not define the domain values associated with this element. Note that the domain values for this element are not strictly an enumerated list.

### 4.8.3 Used by:

- Complex type: Product
- Complex type: QuotableProduct

### 4.8.4 Figure:

### 4.8.5 Schema Fragment:

```
<xsd:group name="Product.model">

</xsd:group>
```

## 4.9 RoutingExplicitDetails.model

### 4.9.1 Description:

### 4.9.2 Contents:

**routingName** (exactly one occurrence; of the type xsd:string) A real name that is used to identify a party involved in the routing of a payment.

**routingAddress** (zero or one occurrence; of the type Address) A physical postal address via which a payment can be routed.

**routingAccountNumber** (zero or one occurrence; of the type xsd:string) An account number via which a payment can be routed.

**routingReferenceText** (zero or more occurrences; of the type xsd:string) A piece of free-format text used to assist the identification of a party involved in the routing of a payment.

### 4.9.3 Used by:

- Complex type: RoutingExplicitDetails
- Complex type: RoutingIdsAndExplicitDetails

### 4.9.4 Figure:

### 4.9.5 Schema Fragment:

    </xsd:element>
  </xsd:sequence>
</xsd:group>
```

## 4.10 RoutingIdentification.model

### 4.10.1 Description:

### 4.10.2 Contents:

Either

**routingIds** (exactly one occurrence; of the type RoutingIds) A set of unique identifiers for a party, eachone identifying the party within a payment system. The assumption is that each party will not have more than one identifier within the same payment system.

Or

**routingExplicitDetails** (exactly one occurrence; of the type RoutingExplicitDetails) A set of details that is used to identify a party involved in the routing of a payment when the party does not have a code that identifies it within one of the recognized payment systems.

Or

**routingIdsAndExplicitDetails** (exactly one occurrence; of the type RoutingIdsAndExplicitDetails) A combination of coded payment system identifiers and details for physical addressing for a party involved in the routing of a payment.

### 4.10.3 Used by:

- Complex type: Beneficiary
- Complex type: CorrespondentInformation
- Complex type: IntermediaryInformation
- Complex type: Routing

      </xsd:annotation>
    </xsd:element>
  </xsd:choice>
</xsd:group>
```

## 4.12 VersionHistory.model

### 4.12.1 Description:

### 4.12.2 Contents:

**version** (exactly one occurrence; of the type xsd:nonNegativeInteger) The version number

**effectiveDate** (zero or one occurrence; of the type IdentifiedDate) Optionally it is possible to specify a version effective date when a versionId is supplied.

### 4.12.3 Used by:

- Complex type: AssetPool
- Complex type: VersionedContractId
- Complex type: VersionedTradeId

### 4.12.4 Figure:

<xsd:complexType name="RelativeDateOffset">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A type defining a date (referred to as the derived date) as a
      relative offset from another date (referred to as the anchor
      date). If the anchor date is itself an adjustable date then the
      offset is assumed to be calculated from the adjusted anchor
      date. A number of different scenarios can be supported, namely;
      1) the derived date may simply be a number of calendar periods
      (days, weeks, months or years) preceding or following the
      anchor date; 2) the unadjusted derived date may be a number of
      calendar periods(days, weeks, months or years) preceding or
      following the anchor date with the resulting unadjusted derived
      date subject to adjustment in accordance with a specified
      business day convention, i.e. the derived date must fall on a
      good business day; 3) the derived date may be a number of
      business days preceding or following the anchor date. Note that
      the businessDayConvention specifies any required adjustment to
      the unadjusted derived date. A negative or positive value in
      the periodMultiplier indicates whether the unadjusted derived
      precedes or follows the anchor date. The businessDayConvention
      should contain a value NONE if the day type element contains a
      value of Business (since specifying a negative or positive
      business days offset would already guarantee that the derived
      date would fall on a good business day in the specified
      business centers).

            <xsd:annotation>

```

```

<xsd:documentation xml:lang="en">
  The rates to be applied to the initial or final stub may be
  the linear interpolation of two different rates. While the
  majority of the time, the rate indices will be the same as
  that specified in the stream and only the tenor itself will
  be different, it is possible to specify two different
  rates. For example, a 2 month stub period may use the
  linear interpolation of a 1 month and 3 month rate. The
  different rates would be specified in this component. Note
  that a maximum of two rates can be specified. If a stub
  period uses the same floating rate index, including tenor,
  as the regular calculation periods then this should not be
  specified again within this component, i.e. the stub
  calculation period amount component may not need to be
  specified even if there is an initial or final stub period.
  If a stub period uses a different floating rate index
  compared to the regular calculation periods then this
  should be specified within this component. If specified
  here, they are likely to have id attributes, allowing them
  to be referenced from within the cashflows component.

# ***1 Global Complex Types***

## 1.1 CancelTradeMatch

### 1.1.1 Description:

A type defining the content model for a message requesting that a previously requested TradeMatch process be cancelled.

### 1.1.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type RequestMessage)

- A type defining the basic content of a message that requests the receiver to perform some business operation determined by the message type and its content.

**partyTradeIdentifier** (exactly one occurrence; of the type PartyTradeIdentifier) The trade reference identifier(s) allocated to the trade by the parties involved.

**party** (exactly one occurrence; of the type Party) A legal entity or a subdivision of a legal entity.

### 1.1.3 Used by:

### 1.1.4 Derived Types:

### 1.1.5 Figure:

### 1.1.6 Schema Fragment:

```
<xsd:complexType name="CancelTradeMatch">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A type defining the content model for a message requesting that a
      previously requested TradeMatch process be cancelled.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:complexContent>
    <xsd:extension base="RequestMessage">
      <xsd:sequence>
        <xsd:element name="partyTradeIdentifier" type="PartyTradeIdentifier">
          <xsd:annotation>
            <xsd:documentation xml:lang="en">
              The trade reference identifier(s) allocated to the trade
              by the parties involved.
            </xsd:documentation>
          </xsd:annotation>
        </xsd:element>
        <xsd:element name="party" type="Party">
          <xsd:annotation>
            <xsd:documentation xml:lang="en">
              A legal entity or a subdivision of a legal entity.
            </xsd:documentation>
            <xsd:documentation xml:lang="en">
              Parties can perform multiple roles in a trade lifecycle.
              For example, the principal parties obligated to make
              payments from time to time during the term of the trade,
              but may include other parties involved in, or incidental
              to, the trade, such as parties acting in the role of
              novation transferor/transferee, broker, calculation
              agent, etc. In FpML roles are defined in multiple places
              within a document.
            </xsd:documentation>
          </xsd:annotation>
        </xsd:element>
      </xsd:sequence>
    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

## 1.2 ModifyTradeMatch

### 1.2.1 Description:

A type defining the content of a message requesting that the details of a trade previously sent for matching be modified.

### 1.2.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type RequestMessage)

- A type defining the basic content of a message that requests the receiver to perform some business operation determined by the message type and its content.

**trade** (exactly one occurrence; of the type Trade) The root element in an FpML trade document.

**party** (one or more occurrences; of the type Party) A legal entity or a subdivision of a legal entity.

### 1.2.3 Used by:

### 1.2.4 Derived Types:

### 1.2.5 Figure:

### 1.2.6 Schema Fragment:

      </xsd:sequence>
    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

## 1.3 RequestTradeMatch

### 1.3.1 Description:

A type defining the content model for a message requesting that the contained trade be put forward for matching.

### 1.3.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type RequestMessage)

- A type defining the basic content of a message that requests the receiver to perform some business operation determined by the message type and its content.

**trade** (exactly one occurrence; of the type Trade) The root element in an FpML trade document.

**party** (one or more occurrences; of the type Party) A legal entity or a subdivision of a legal entity.

### 1.3.3 Used by:

### 1.3.4 Derived Types:

### 1.3.5 Figure:

### 1.3.6 Schema Fragment:

      </xsd:sequence>
    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

## 1.4 TradeAlreadyMatched

### 1.4.1 Description:

A type defining the content model for a message sent by a confirmation provider when it believes that one party has repeated a request to confirm a trade.

### 1.4.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type ResponseMessage)

- A type refining the generic message content model to make it specific to response messages.

**tradeIdentifier** (exactly one occurrence; of the type TradeIdentifier) An instance of a unique trade identifier.

**party** (exactly one occurrence; of the type Party) A legal entity or a subdivision of a legal entity.

### 1.4.3 Used by:

### 1.4.4 Derived Types:

### 1.4.5 Figure:

### 1.4.6 Schema Fragment:

# ***1 Global Complex Types***

## 1.1 AssetValuation

### 1.1.1 Description:

A structure that holds a set of measures about an asset, including possibly their sensitivities.

### 1.1.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type Valuation)

- A valuation of an valuable object - an asset or a pricing input. This is an abstract type, used as a base for values of pricing structures such as yield curves as well as asset values.

**quote** (zero or more occurrences; of the type Quotation) One or more numerical measures relating to the asset, possibly together with sensitivities of that measure to pricing inputs.

**fxRate** (zero or one occurrence; of the type FxRate) Indicates the rate of a currency conversion that may have been used to compute valuations.

### 1.1.3 Used by:

- Complex type: Position
- Complex type: ValuationSet

### 1.1.4 Derived Types:

### 1.1.5 Figure:

### 1.1.6 Schema Fragment:

```
<xsd:complexType name="AssetValuation">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A structure that holds a set of measures about an asset,
      including possibly their sensitivities.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:complexContent>
    <xsd:extension base="Valuation">
      <xsd:sequence>
        <xsd:element name="quote" type="Quotation" minOccurs="0" maxOccurs="unbounded">
          <xsd:annotation>
            <xsd:documentation xml:lang="en">
              One or more numerical measures relating to the asset,
              possibly together with sensitivities of that measure to
              pricing inputs.
            </xsd:documentation>
          </xsd:annotation>
        </xsd:element>
        <xsd:element name="fxRate" type="FxRate" minOccurs="0">
          <xsd:annotation>
            <xsd:documentation xml:lang="en">
              Indicates the rate of a currency conversion that may have
              been used to compute valuations.
            </xsd:documentation>
          </xsd:annotation>
        </xsd:element>
      </xsd:sequence>
    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

## 1.2 DerivedValuationScenario

### 1.2.1 Description:

A valuation scenario that is derived from another valuation scenario.

### 1.2.2 Contents:

**name** (zero or one occurrence; of the type xsd:string) The (optional) name for this valuation scenario, used for understandability. For example "EOD Valuations".

**baseValuationScenario** (exactly one occurrence; of the type ValuationScenarioReference) An (optional) reference to a valuation scenario from which this one is derived.

**valuationDate** (zero or one occurrence; of the type IdentifiedDate) The (optional) date for which the assets are valued. If not present, the valuation date will be that of the base valuation scenario.

**marketReference** (zero or one occurrence; of the type MarketReference) A reference to the market environment used to price the asset. If not present, the market will be that of the base valuation scenario.

**shift** (zero or more occurrences; of the type PricingParameterShift) A collection of shifts to be applied to market inputs prior to computation of the derivative.

### 1.2.3 Used by:

### 1.2.4 Derived Types:

### 1.2.5 Figure:

### 1.2.6 Schema Fragment:

```
<xsd:complexType name="DerivedValuationScenario">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A valuation scenario that is derived from another valuation
      scenario.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:sequence>
    <xsd:element name="name" type="xsd:string" minOccurs="0">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          The (optional) name for this valuation scenario, used for
          understandability. For example "EOD Valuations".
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
    <xsd:element name="baseValuationScenario" type="ValuationScenarioReference">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          An (optional) reference to a valuation scenario from which
          this one is derived.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
    <xsd:element name="valuationDate" type="IdentifiedDate" minOccurs="0">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          The (optional) date for which the assets are valued. If not
          present, the valuation date will be that of the base
          valuation scenario.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
    <xsd:element name="marketReference" type="MarketReference" minOccurs="0">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          A reference to the market environment used to price the
          asset. If not present, the market will be that of the base
          valuation scenario.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
    <xsd:element name="shift" type="PricingParameterShift" minOccurs="0" maxOccurs="unbounded">

```

```
<xsd:documentation xml:lang="en">
  A collection of shifts to be applied to market inputs prior
  to computation of the derivative.
</xsd:documentation>
</xsd:annotation>
</xsd:element>
</xsd:sequence>
<xsd:attribute name="id" type="xsd:ID"/>
</xsd:complexType>
```

## 1.3 Position

### 1.3.1 Description:

A collection of related trades or positions and the corresponding aggregate exposures generated by these.

### 1.3.2 Contents:

**positionId** (exactly one occurrence; of the type PositionId) A version-independent identifier for the position, possibly based on trade identifier.

**version** (zero or one occurrence; of the type xsd:positiveInteger) A version identifier. Version identifiers must be ascending, i.e. higher numbers imply newer versions. There is no requirement that version identifiers for a position be sequential or small, so for example timestamp-based version identifiers could be used.

**reportingRoles** (zero or one occurrence; of the type ReportingRoles) Information about the roles of the parties with respect to reporting the positions.

**constituent** (exactly one occurrence; of the type PositionConstituent) The components that create this position.

**scheduledDate** (zero or more occurrences; of the type ScheduledDate) Position level schedule date, such as final payment dates, in a simple and flexible format.

**valuation** (zero or more occurrences; of the type AssetValuation) Valuation reported for the position, such as NPV or accrued interest. The asset/object references in the valuations should refer to the deal or components of the deal in the position, e.g. legs, streams, or underlyers.

### 1.3.3 Used by:

- Complex type: DefinePosition
- Complex type: PositionReport

### 1.3.4 Derived Types:

- Complex type: DefinePosition

### 1.3.5 Figure:

### 1.3.6 Schema Fragment:

```
<xsd:complexType name="Position">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A collection of related trades or positions and the corresponding
      aggregate exposures generated by these.
    </xsd:documentation>

  <xsd:sequence>
    <xsd:group ref="PositionIdAndVersion.model"/>
    <xsd:element name="reportingRoles" type="ReportingRoles" minOccurs="0">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          Information about the roles of the parties with respect to
          reporting the positions.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
    <xsd:element name="constituent" type="PositionConstituent">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          The components that create this position.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
    <xsd:element name="scheduledDate" type="ScheduledDate" minOccurs="0" maxOccurs="unbounded">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          Position level schedule date, such as final payment dates, in
          a simple and flexible format.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
    <xsd:element name="valuation" type="AssetValuation" minOccurs="0" maxOccurs="unbounded">
```

```
<xsd:annotation>
  <xsd:documentation xml:lang="en">
    Valuation reported for the position, such as NPV or accrued
    interest. The asset/object references in the valuations
    should refer to the deal or components of the deal in the
    position, e.g. legs, streams, or underlyers.
  </xsd:documentation>
</xsd:annotation>
</xsd:element>
</xsd:sequence>
<xsd:attribute name="id" type="xsd:ID"/>
</xsd:complexType>
```

## 1.4 PositionConstituent

### 1.4.1 Description:

The items (trades, trade references, holdings, other positions) that comprise this position. Currently a position may consist only of a single trade, a reference to a previously submitted position, or a reference to the trade. The choice structure is optional to allow extensions to be placed within this container.

### 1.4.2 Contents:

Either

**trade** (exactly one occurrence; of the type Trade) An element that allows the full details of the trade to be used as a mechanism for identifying the trade for which the post-trade event pertains.

Or

**positionVersionReference** (exactly one occurrence; of the type xsd:positiveInteger) A previously submitted version of the position.

Or

**tradeReference** (exactly one occurrence; of the type PartyTradeIdentifiers) The trade reference identifier(s) allocated to the trade by the parties involved.

### 1.4.3 Used by:

- Complex type: Position

### 1.4.4 Derived Types:

### 1.4.5 Figure:

### 1.4.6 Schema Fragment:

```
<xsd:complexType name="PositionConstituent">
  <xsd:annotation>

          the parties involved.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
  </xsd:choice>
</xsd:complexType>
```

## 1.5 Quotation

### 1.5.1 Description:

Some kind of numerical measure about an asset, eg. its NPV, together with characteristics of that measure, together with optional sensitivities.

### 1.5.2 Contents:

**value** (zero or one occurrence; of the type xsd:decimal) The value of the the quotation.

**sensitivitySet** (zero or more occurrences; of the type SensitivitySet) Zero or more sets of sensitivities of this measure to various input parameters.

### 1.5.3 Used by:

- Complex type: AssetValuation

### 1.5.4 Derived Types:

### 1.5.5 Figure:

### 1.5.6 Schema Fragment:

```
<xsd:complexType name="Quotation">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      Some kind of numerical measure about an asset, eg. its NPV,
      together with characteristics of that measure, together with
      optional sensitivities.
    </xsd:documentation>
  </xsd:annotation>

          input parameters.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
  </xsd:sequence>
</xsd:complexType>
```

## 1.6 ReportingRoles

### 1.6.1 Description:

The roles of the parties in reporting information such as positions.

### 1.6.2 Contents:

**baseParty** (exactly one occurrence; of the type PartyReference) A reference to the party from whose perspective the position is valued, ie. the owner or holder of the position.

**activityProvider** (zero or one occurrence; of the type PartyReference) A reference to the party responsible for reporting trading activities.

**positionProvider** (zero or one occurrence; of the type PartyReference) A reference to the party responsible for reporting the position itself and its constituents.

**valuationProvider** (zero or one occurrence; of the type PartyReference) A reference to the party responsible for calculating and reporting the valuations of the positions.

### 1.6.3 Used by:

- Complex type: Position

### 1.6.4 Derived Types:

### 1.6.5 Figure:

### 1.6.6 Schema Fragment:

</xsd:complexType>
```

## 1.7 ScheduledDate

### 1.7.1 Description:

An servicing date relevant for a trade structure, such as a payment or a reset.

### 1.7.2 Contents:

Either

**adjustedDate** (exactly one occurrence; of the type xsd:date)

**type** (exactly one occurrence; of the type ScheduledDateType) The type of the date, e.g. next or previous payment.

**assetReference** (zero or one occurrence; of the type AnyAssetReference) A reference to the leg (or other product component) for which these dates occur.

Either

**associatedValue** (exactly one occurrence; of the type AssetValuation) The value that is associated with the scheduled date.

Or

**associatedValueReference** (exactly one occurrence; of the type ValuationReference) A reference to the value associated with this scheduled date.

### 1.7.3 Used by:

- Complex type: Position
- Complex type: ScheduledDates

### 1.7.4 Derived Types:

### 1.7.5 Figure:

### 1.7.6 Schema Fragment:

```
<xsd:complexType name="ScheduledDate">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">

    </xsd:element>
    <xsd:group ref="AssociatedValue.model" minOccurs="0" maxOccurs="unbounded"/>
  </xsd:sequence>
</xsd:complexType>
```

## 1.8 ScheduledDates

### 1.8.1 Description:

A list of dates (cash flows, resets, etc.) that are relevant for this structure, e.g. next cash flow, last reset, etc. Provides a way to list upcoming or recent servicing dates related to this trade stream in a way that is simpler and more flexible than the FpML "cashflows" structure.

### 1.8.2 Contents:

**scheduledDate** (one or more occurrences; of the type ScheduledDate) A single stream level scheduled servicing date.

### 1.8.3 Used by:

### 1.8.4 Derived Types:

### 1.8.5 Figure:

### 1.8.6 Schema Fragment:

```
<xsd:complexType name="ScheduledDates">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">

      this structure, e.g. next cash flow, last reset, etc. Provides a
      way to list upcoming or recent servicing dates related to this
      trade stream in a way that is simpler and more flexible than the
      FpML "cashflows" structure.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:sequence>
    <xsd:element name="scheduledDate" type="ScheduledDate" maxOccurs="unbounded">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          A single stream level scheduled servicing date.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
  </xsd:sequence>
</xsd:complexType>
```

## 1.9 ScheduledDateType

### 1.9.1 Description:

A scheme used to identify the type of a stream scheduled servicing date.

### 1.9.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type `xsd:normalizedString`)

•

### 1.9.3 Used by:

- Complex type: `ScheduledDate`

### 1.9.4 Derived Types:

### 1.9.5 Figure:

### 1.9.6 Schema Fragment:

```
<xsd:complexType name="ScheduledDateType">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A scheme used to identify the type of a stream scheduled
      servicing date.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:simpleContent>
    <xsd:extension base="xsd:normalizedString">
      <xsd:attribute name="scheduledDateTypeScheme" type="xsd:anyURI" default="http://www.fpm1
    </xsd:extension>
  </xsd:simpleContent>
</xsd:complexType>
```

## 1.10 Sensitivity

### 1.10.1 Description:

The sensitivity of a value to a defined change in input parameters.

### 1.10.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type xsd:decimal)

### 1.10.3 Used by:

- Complex type: SensitivitySet

### 1.10.4 Derived Types:

### 1.10.5 Figure:

### 1.10.6 Schema Fragment:

```
<xsd:complexType name="Sensitivity">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      The sensitivity of a value to a defined change in input
      parameters.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:simpleContent>
    <xsd:extension base="xsd:decimal">
      <xsd:attribute name="name" type="xsd:normalizedString">
        <xsd:annotation>
          <xsd:documentation xml:lang="en">
            A optional name for this sensitivity. This is primarily
            intended for display purposes.
          </xsd:documentation>
        </xsd:annotation>
      </xsd:attribute>
      <xsd:attribute name="definitionRef" type="xsd:IDREF">
        <xsd:annotation>
          <xsd:documentation xml:lang="en">
            A optional (but normally supplied) reference to the
            definition of this sensitivity.
          </xsd:documentation>
        </xsd:annotation>
      </xsd:attribute>
    </xsd:extension>
  </xsd:simpleContent>
</xsd:complexType>
```

## 1.11 SensitivitySet

### 1.11.1 Description:

A collection of sensitivities. References a definition that explains the meaning/type of the sensitivities.

### 1.11.2 Contents:

**name** (zero or one occurrence; of the type xsd:string)

**definitionReference** (zero or one occurrence; of the type SensitivitySetReference) A reference to a sensitivity set definition.

**sensitivity** (zero or more occurrences; of the type Sensitivity)

### 1.11.3 Used by:

- Complex type: Quotation

### 1.11.4 Derived Types:

### 1.11.5 Figure:

### 1.11.6 Schema Fragment:

```
<xsd:complexType name="SensitivitySet">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A collection of sensitivities. References a definition that
      explains the meaning/type of the sensitivities.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:sequence>
    <xsd:element name="name" type="xsd:string" minOccurs="0"/>
    <xsd:element name="definitionReference" type="SensitivitySetReference" minOccurs="0">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          A reference to a sensitivity set definition.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
    <xsd:element name="sensitivity" type="Sensitivity" minOccurs="0" maxOccurs="unbounded"/>
  </xsd:sequence>
  <xsd:attribute name="id" type="xsd:ID"/>
</xsd:complexType>
```

## 1.12 SensitivitySetReference

### 1.12.1 Description:

Reference to a sensitivity set.

### 1.12.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type Reference)

- The abstract base class for all types which define intra-document pointers.

### 1.12.3 Used by:

- Complex type: SensitivitySet

### 1.12.4 Derived Types:

### 1.12.5 Figure:

### 1.12.6 Schema Fragment:

```
<xsd:complexType name="SensitivitySetReference">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      Reference to a sensitivity set.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:complexContent>
    <xsd:extension base="Reference">
      <xsd:attribute name="href" type="xsd:IDREF" use="required" ecore:reference="SensitivitySetReference"/>
    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

## 1.13 Valuations

### 1.13.1 Description:

A set of valuation.

### 1.13.2 Contents:

Either

**valuation** (exactly one occurrence; of the type AssetValuation)

Or

**valuationReference** (exactly one occurrence; of the type ValuationReference) A reference to a quotation

### 1.13.3 Used by:

### 1.13.4 Derived Types:

### 1.13.5 Figure:

### 1.13.6 Schema Fragment:

```
<xsd:complexType name="Valuations">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A set of valuation.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:sequence>
    <xsd:group ref="AssetValuationOrReference.model" maxOccurs="unbounded"/>
  </xsd:sequence>
</xsd:complexType>
```

## 1.14 ValuationSet

### 1.14.1 Description:

A set of valuation inputs and results. This structure can be used for requesting valuations, or for reporting them. In general, the request fills in fewer elements.

### 1.14.2 Contents:

**name** (zero or one occurrence; of the type `xsd:string`) The name of the valuation set, used to understand what it means. E.g., "EOD Values and Risks for Party A".

**valuationScenario** (zero or more occurrences; of the type `ValuationScenario`) Valuation scenarios used (requested/reported) in this valuation set. E.g., the EOD valuation scenario for a particular value date. Used for the first occurrence of a valuation scenario in a document.

**valuationScenarioReference** (zero or more occurrences; of the type `ValuationScenarioReference`) References to valuation scenarios used (requested/reported) in this valuation set. E.g., a reference to the EOD valuation scenario for a particular value date. Used for subsequent occurrences of a valuation set in an FpML document.

**baseParty** (zero or one occurrence; of the type `PartyReference`) Reference to the party from whose point of view the assets are valued.

**quotationCharacteristics** (zero or more occurrences; of the type `QuotationCharacteristics`) Characteristics (measure types, units, sides, etc.) of the quotes used (requested/reported) in the valuation set.

**sensitivitySetDefinition** (zero or more occurrences; of the type `SensitivitySetDefinition`) Definition(s) of sensitivity sets used (requested or reported) in this valuation set.

**detail** (zero or one occurrence; of the type `ValuationSetDetail`) Does this valuation set include a market environment?

**assetValuation** (zero or more occurrences; of the type `AssetValuation`) Valuations reported in this valuation set. These values can be values (NPVs, prices, etc.) or risks (DAR, etc.) and can include sensitivities.

### 1.14.3 Used by:

- Element: `valuationSet`

### 1.14.4 Derived Types:

### 1.14.5 Figure:

### 1.14.6 Schema Fragment:

```
<xsd:complexType name="ValuationSet">

</xsd:complexType>
```

## ***2 Global Elements***

## **2.1 valuationSet**

### **2.1.1 Description:**

### **2.1.2 Contents:**

Element valuationSet is defined by the complex type ValuationSet

### **2.1.3 Used by:**

- Complex type: PortfolioValuationItem
- Complex type: TradeValuationItem
- Complex type: ValuationDocument

### **2.1.4 Substituted by:**

### **2.1.5 Figure:**

### **2.1.6 Schema Fragment:**

```
<xsd:element name="valuationSet" type="ValuationSet"/>
```

## **3 Groups**

## 3.1 AdjustedAndOrUnadjustedDate.model

### 3.1.1 Description:

Contains at least one of an adjusted date and and unadjusted date, using the usual meanings of those terms.

### 3.1.2 Contents:

Either

**adjustedDate** (exactly one occurrence; of the type xsd:date)

### 3.1.3 Used by:

- Complex type: ScheduledDate

### 3.1.4 Figure:

### 3.1.5 Schema Fragment:

```
<xsd:group name="AdjustedAndOrUnadjustedDate.model">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      Contains at least one of an adjusted date and and unadjusted
      date, using the usual meanings of those terms.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:choice>
    <xsd:sequence>
      <xsd:element name="unadjustedDate" type="xsd:date"/>
      <xsd:element name="adjustedDate" type="xsd:date" minOccurs="0"/>
    </xsd:sequence>
    <xsd:element name="adjustedDate" type="xsd:date"/>
  </xsd:choice>
</xsd:group>
```

## 3.2 AssetValuationOrReference.model

### 3.2.1 Description:

A quotation or a reference to a quotation.

### 3.2.2 Contents:

Either

**valuation** (exactly one occurrence; of the type AssetValuation)

Or

**valuationReference** (exactly one occurrence; of the type ValuationReference) A reference to a quotation

### 3.2.3 Used by:

- Complex type: Valuations

### 3.2.4 Figure:

### 3.2.5 Schema Fragment:

```
<xsd:group name="AssetValuationOrReference.model">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A quotation or a reference to a quotation.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:choice>
    <xsd:element name="valuation" type="AssetValuation">
      <xsd:annotation>
        <xsd:documentation xml:lang="en"/>
      </xsd:annotation>
    </xsd:element>
    <xsd:element name="valuationReference" type="ValuationReference">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          A reference to a quotation
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
  </xsd:choice>
</xsd:group>
```

## 3.3 AssociatedValue.model

### 3.3.1 Description:

An associated value or reference for a scheduled date.

### 3.3.2 Contents:

Either

**associatedValue** (exactly one occurrence; of the type AssetValuation) The value that is associated with the scheduled date.

Or

**associatedValueReference** (exactly one occurrence; of the type ValuationReference) A reference to the value associated with this scheduled date.

### 3.3.3 Used by:

- Complex type: ScheduledDate

### 3.3.4 Figure:

### 3.3.5 Schema Fragment:

```
<xsd:group name="AssociatedValue.model">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      An associated value or reference for a scheduled date.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:choice>
    <xsd:element name="associatedValue" type="AssetValuation">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          The value that is associated with the scheduled date.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
    <xsd:element name="associatedValueReference" type="ValuationReference">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          A reference to the value associated with this scheduled date.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
  </xsd:choice>
</xsd:group>
```

## 4 Schema listing

```
<xsd:schema ecore:nsPrefix="fpml" ecore:package="org.fpml" ecore:documentRoot="FpML" targetNameSpace="http://www.fpml.org/FpML-5" >

# ***1 Global Complex Types***

## 1.1 VarianceAmount

### 1.1.1 Description:

Calculation of a Variance Amount.

### 1.1.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type CalculatedAmount)

- An abstract base class for all calculated money amounts, which are in the currency of the cash multiplier of the calculation.

**variance** (exactly one occurrence; of the type Variance) Specifies Variance.

### 1.1.3 Used by:

- Complex type: VarianceLeg

### 1.1.4 Derived Types:

### 1.1.5 Figure:

### 1.1.6 Schema Fragment:

```
<xsd:complexType name="VarianceAmount">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      Calculation of a Variance Amount.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:complexContent>
    <xsd:extension base="CalculatedAmount">
      <xsd:sequence>
        <xsd:element name="variance" type="Variance">
          <xsd:annotation>
            <xsd:documentation xml:lang="en">
              Specifies Variance.
            </xsd:documentation>
          </xsd:annotation>
        </xsd:element>
      </xsd:sequence>
    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

## 1.2 VarianceLeg

### 1.2.1 Description:

A type describing return which is driven by a Variance Calculation.

### 1.2.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type DirectionalLegUnderlyerValuation)

- An abstract base class for all directional leg types with effective date, termination date, and underlyer, where a payer makes a stream of payments of greater than zero value to a receiver.

**amount** (exactly one occurrence; of the type VarianceAmount) Specifies, in relation to each Equity Payment Date, the amount to which the Equity Payment Date relates. Unless otherwise specified, this term has the meaning defined in the ISDA 2002 Equity Derivatives Definitions.

### 1.2.3 Used by:

- Complex type: VarianceSwap

### 1.2.4 Derived Types:

### 1.2.5 Figure:

### 1.2.6 Schema Fragment:

```
<xsd:complexType name="VarianceLeg">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A type describing return which is driven by a Variance
      Calculation.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:complexContent>
    <xsd:extension base="DirectionalLegUnderlyerValuation">
      <xsd:sequence>
        <xsd:element name="amount" type="VarianceAmount">
          <xsd:annotation>
            <xsd:documentation xml:lang="en">
              Specifies, in relation to each Equity Payment Date, the
              amount to which the Equity Payment Date relates. Unless
              otherwise specified, this term has the meaning defined in
              the ISDA 2002 Equity Derivatives Definitions.
            </xsd:documentation>
          </xsd:annotation>
        </xsd:element>
      </xsd:sequence>
    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

## 1.3 VarianceSwap

### 1.3.1 Description:

A Variance Swap modelled using a single netted leg.

### 1.3.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type NettedSwapBase)

- An abstract base class for all swap types which have a single netted leg, such as Variance Swaps, and Correlation Swaps.

**varianceLeg** (exactly one occurrence; of the type VarianceLeg) Variance Leg.

### 1.3.3 Used by:

- Element: varianceSwap
- Complex type: VarianceSwapOption

### 1.3.4 Derived Types:

### 1.3.5 Figure:

### 1.3.6 Schema Fragment:

```
<xsd:complexType name="VarianceSwap">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A Variance Swap modelled using a single netted leg.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:complexContent>
    <xsd:extension base="NettedSwapBase">
      <xsd:sequence>
        <xsd:element name="varianceLeg" type="VarianceLeg">
          <xsd:annotation>
            <xsd:documentation xml:lang="en">
              Variance Leg.
            </xsd:documentation>
          </xsd:annotation>
        </xsd:element>
      </xsd:sequence>
    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

## 1.4 VarianceSwapOption

### 1.4.1 Description:

An Option on a Variance Swap.

### 1.4.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type OptionBaseExtended)

- Base type for options starting with the 4-3 release, until we refactor the schema as part of the 5-0 release series

**strike** (exactly one occurrence; of the type OptionNumericStrike) Strike of the Variance Swap Option.

**varianceSwap** (exactly one occurrence; of the type VarianceSwap) Variance Swap which is the underlying of this Option.

### 1.4.3 Used by:

- Element: varianceSwapOption

### 1.4.4 Derived Types:

### 1.4.5 Figure:

### 1.4.6 Schema Fragment:

```
<xsd:complexType name="VarianceSwapOption">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      An Option on a Variance Swap.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:complexContent>
    <xsd:extension base="OptionBaseExtended">
      <xsd:sequence>
        <xsd:element name="strike" type="OptionNumericStrike">
          <xsd:annotation>
            <xsd:documentation xml:lang="en">
              Strike of the Variance Swap Option.
            </xsd:documentation>
          </xsd:annotation>
        </xsd:element>
        <xsd:element name="varianceSwap" type="VarianceSwap">
          <xsd:annotation>
            <xsd:documentation xml:lang="en">
              Variance Swap which is the underlying of this Option.
            </xsd:documentation>
          </xsd:annotation>
        </xsd:element>
      </xsd:sequence>
    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

## ***2 Global Elements***

## **2.1 varianceSwap**

### **2.1.1 Description:**

Specifies the structure of a variance swap.

### **2.1.2 Contents:**

Element varianceSwap is defined by the complex type VarianceSwap

### **2.1.3 Used by:**

### **2.1.4 Substituted by:**

### **2.1.5 Figure:**

### **2.1.6 Schema Fragment:**

```
<xsd:element name="varianceSwap" type="VarianceSwap" substitutionGroup="product">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      Specifies the structure of a variance swap.
    </xsd:documentation>
  </xsd:annotation>
</xsd:element>
```

## 2.2 varianceSwapOption

### 2.2.1 Description:

Specifies the structure of a variance swap option.

### 2.2.2 Contents:

Element varianceSwapOption is defined by the complex type VarianceSwapOption

### 2.2.3 Used by:

### 2.2.4 Substituted by:

### 2.2.5 Figure:

### 2.2.6 Schema Fragment:

```
<xsd:element name="varianceSwapOption" type="VarianceSwapOption" substitutionGroup="product">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      Specifies the structure of a variance swap option.
    </xsd:documentation>
  </xsd:annotation>
</xsd:element>
```
