## ***1 Global Simple Types***

## 1.1 QueryParameterValue

### 1.1.1 Description:

A type representing a value corresponding to an identifier for a parameter describing a query portfolio.

### 1.1.2 Contents:

Inherited element(s): (This definition restricts the content defined by the type xsd:string)

### 1.1.3 Used by:

### 1.1.4 Derived Types:

### 1.1.5 Schema Fragment:

```
<xsd:simpleType name="QueryParameterValue">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A type representing a value corresponding to an identifier for a
      parameter describing a query portfolio.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:restriction base="xsd:string"/>
</xsd:simpleType>
```

## ***2 Global Complex Types***

## 2.1 Account

### 2.1.1 Description:

A generic account that represents any party's account at another party. Parties may be identified by the account at another party.

### 2.1.2 Contents:

**accountBeneficiary** (zero or one occurrence; of the type PartyReference) A reference to the party beneficiary of the account.

### 2.1.3 Used by:

- Complex type: Party

### 2.1.4 Derived Types:

### 2.1.5 Figure:

### 2.1.6 Schema Fragment:

```
<xsd:complexType name="Account">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A generic account that represents any party's account at another
      party. Parties may be identified by the account at another party.

```

## 2.2 AccountId

### 2.2.1 Description:

The data type used for party identifiers.

### 2.2.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type xsd:normalizedString)

- 

### 2.2.3 Used by:

- Complex type: Account

### 2.2.4 Derived Types:

### 2.2.5 Figure:

### 2.2.6 Schema Fragment:

```
<xsd:complexType name="AccountId">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      The data type used for party identifiers.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:simpleContent>
    <xsd:extension base="xsd:normalizedString">

        <xsd:annotation>
          <xsd:documentation xml:lang="en">
            The identifier scheme used with this accountId. A unique
            URI to determine the authoritative issuer of these
            identifiers.
          </xsd:documentation>
        </xsd:annotation>
      </xsd:attribute>
    </xsd:extension>
  </xsd:simpleContent>
</xsd:complexType>
```

## 2.3 Allocation

### 2.3.1 Description:

### 2.3.2 Contents:

**allocationTradeId** (exactly one occurrence; of the type PartyTradeIdentifier) Unique ID for the allocation.

Either

**accountReference** (exactly one occurrence; of the type AccountReference) Reference to the subaccount definition in the Party list.

Or

**partyReference** (exactly one occurrence; of the type PartyReference) Reference to the party definition.

Either

**allocatedFraction** (exactly one occurrence; of the type xsd:decimal) The fractional allocation (0.45 = 45%) of the notional and "block" fees to this particular client subaccount.

Or

**allocatedNotional** (exactly one occurrence; of the type Money) The notional allocation (amount and currency) to this particular client account.

**collateral** (zero or one occurrence; of the type Collateral) The sum that must be posted upfront to collateralize against counterparty credit risk.

**creditChargeAmount** (zero or one occurrence; of the type Money) Special credit fee assessed to certain institutions.

**approvals** (zero or one occurrence; of the type Approvals) A container for approval states in the workflow.

**masterConfirmationDate** (zero or one occurrence; of the type xsd:date) The date of the confirmation executed between the parties and intended to govern the allocated trade between those parties.

### 2.3.3 Used by:

- Complex type: Allocations

### 2.3.4 Derived Types:

### 2.3.5 Figure:

### 2.3.6 Schema Fragment:

```
<xsd:complexType name="Allocation">
  <xsd:sequence>

  </xsd:sequence>
</xsd:complexType>
```

```
    <xsd:group ref="AllocationContent.model"/>
  </xsd:sequence>
</xsd:complexType>
```

## 2.4 Allocations

### 2.4.1 Description:

### 2.4.2 Contents:

**allocation** (one or more occurrences; of the type Allocation)

### 2.4.3 Used by:

- Complex type: RequestAllocation
- Complex type: Trade

### 2.4.4 Derived Types:

### 2.4.5 Figure:

### 2.4.6 Schema Fragment:

```
<xsd:complexType name="Allocations">
  <xsd:sequence>
    <xsd:element name="allocation" type="Allocation" maxOccurs="unbounded"/>
  </xsd:sequence>
</xsd:complexType>
```

## 2.5 AllocationTradeIdentifier

### 2.5.1 Description:

This type is used to identify that a trade id is referring to a block trade.

### 2.5.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type PartyTradeIdentifier)

- A type defining one or more trade identifiers allocated to the trade by a party. A link identifier allows the trade to be associated with other related trades, e.g. trades forming part of a larger structured transaction. It is expected that for external communication of trade there will be only one tradeId sent in the document per party.

**blockTradeId** (zero or one occurrence; of the type PartyTradeIdentifier) The trade id of the block trade. This is used by each one of the allocated trades to reference the block trade.

### 2.5.3 Used by:

### 2.5.4 Derived Types:

### 2.5.5 Figure:

### 2.5.6 Schema Fragment:

```
<xsd:complexType name="AllocationTradeIdentifier">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      This type is used to identify that a trade id is referring to a
      block trade.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:complexContent>
    <xsd:extension base="PartyTradeIdentifier">
      <xsd:sequence>
        <xsd:element name="blockTradeId" type="PartyTradeIdentifier" minOccurs="0">
          <xsd:annotation>
            <xsd:documentation xml:lang="en">
              The trade id of the block trade. This is used by each one
              of the allocated trades to reference the block trade.
            </xsd:documentation>
          </xsd:annotation>
        </xsd:element>
      </xsd:sequence>
    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

## 2.6 Amendment

### 2.6.1 Description:

An event type that defines the content of an Amendment transaction.

### 2.6.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type Event)

- A type defining the basic structure of FpML business events; it is refined by its derived types.

**trade** (exactly one occurrence; of the type Trade)

**amendmentTradeDate** (exactly one occurrence; of the type xsd:date) The date on which the the parties enter into the Amendment transaction

**amendmentEffectiveDate** (exactly one occurrence; of the type xsd:date) The date on which the Amendment becomes effective

**payment** (zero or one occurrence; of the type Payment) A payment for the right to amend the trade.

### 2.6.3 Used by:

- Complex type: AmendmentConfirmed
- Complex type: RequestAmendmentConfirmation
- Complex type: TradeAmendmentRequest
- Complex type: TradeAmendmentResponse

### 2.6.4 Derived Types:

### 2.6.5 Figure:

### 2.6.6 Schema Fragment:

```
<xsd:complexType name="Amendment">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      An event type that defines the content of an Amendment
      transaction.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:complexContent>
    <xsd:extension base="Event">
      <xsd:sequence>
        <xsd:element name="trade" type="Trade"/>
        <xsd:group ref="AmendmentDetails.model"/>
        <xsd:element name="payment" type="Payment" minOccurs="0">
          <xsd:annotation>
            <xsd:documentation xml:lang="en">
              A payment for the right to amend the trade.
            </xsd:documentation>
          </xsd:annotation>
        </xsd:element>
      </xsd:sequence>
    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

## 2.7 Approval

### 2.7.1 Description:

A specific approval state in the workflow.

### 2.7.2 Contents:

**type** (exactly one occurrence; of the type xsd:normalizedString) The type of approval (e.g. "Credit").

**status** (exactly one occurrence; of the type xsd:normalizedString) The current state of approval (.e.g preapproved, pending approval, etc.)

**approver** (zero or one occurrence; of the type xsd:normalizedString) The full name or identifying ID of the relevant approver.

### 2.7.3 Used by:

- Complex type: Approvals

### 2.7.4 Derived Types:

### 2.7.5 Figure:

### 2.7.6 Schema Fragment:

```
<xsd:complexType name="Approval">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A specific approval state in the workflow.
    </xsd:documentation>

  </xsd:sequence>
</xsd:complexType>
```

## 2.9 BestFitTrade

### 2.9.1 Description:

A type used to record the differences between the current trade and another indicated trade.

### 2.9.2 Contents:

**tradeIdentifier** (exactly one occurrence; of the type TradeIdentifier) The identifier for the trade compared against.

**differences** (zero or more occurrences; of the type TradeDifference) An optional set of detailed difference records.

### 2.9.3 Used by:

- Complex type: TradeMismatched

### 2.9.4 Derived Types:

### 2.9.5 Figure:

### 2.9.6 Schema Fragment:

```
<xsd:complexType name="BestFitTrade">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">

        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
  </xsd:sequence>
</xsd:complexType>
```

## 2.10 BlockTradeIdentifier

### 2.10.1 Description:

This type is used to identify that a trade id is referring to a block trade.

### 2.10.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type PartyTradeIdentifier)

- A type defining one or more trade identifiers allocated to the trade by a party. A link identifier allows the trade to be associated with other related trades, e.g. trades forming part of a larger structured transaction. It is expected that for external communication of trade there will be only one tradeId sent in the document per party.

**allocationTradeId** (zero or more occurrences; of the type PartyTradeIdentifier) The trade id of the allocated trade. This is used by the block trade to reference the allocated trade.

**blockTradeId** (zero or one occurrence; of the type PartyTradeIdentifier) The trade id of the parent trade for N-level allocations. This element is only used to model N-level allocations in which the trade acts as block and allocated trade at the same time. This basically means the ability to allocate a block trade to multiple allocation trades, and then allocate these in turn to other allocation trades (and so on if desired).

### 2.10.3 Used by:

- Complex type: RequestAllocation

### 2.10.4 Derived Types:

### 2.10.5 Figure:

### 2.10.6 Schema Fragment:

```
<xsd:complexType name="BlockTradeIdentifier">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      This type is used to identify that a trade id is referring to a
      block trade.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:complexContent>
    <xsd:extension base="PartyTradeIdentifier">
      <xsd:sequence>
        <xsd:element name="allocationTradeId" type="PartyTradeIdentifier" minOccurs="0" maxOccurs="unbounded">
          <xsd:annotation>
            <xsd:documentation xml:lang="en">
              The trade id of the allocated trade. This is used by the
              block trade to reference the allocated trade.
            </xsd:documentation>
          </xsd:annotation>
        </xsd:element>
        <xsd:element name="blockTradeId" type="PartyTradeIdentifier" minOccurs="0">
          <xsd:annotation>
            <xsd:documentation xml:lang="en">
              The trade id of the parent trade for N-level allocations.
              This element is only used to model N-level allocations in
              which the trade acts as block and allocated trade at the
              same time. This basically means the ability to allocate a
              block trade to multiple allocation trades, and then
              allocate these in turn to other allocation trades (and so
              on if desired).
            </xsd:documentation>
          </xsd:annotation>
        </xsd:element>
      </xsd:sequence>
    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

## 2.11 ChangeContract

### 2.11.1 Description:

Abstract base class for changes to a Contract

### 2.11.2 Contents:

**contractReference** (exactly one occurrence; of the type ContractReference)

**date** (exactly one occurrence; of the type xsd:date) The date on which the the parties enter into the change

**effectiveDate** (exactly one occurrence; of the type xsd:date) The date on which the change becomes effective

**payment** (zero or one occurrence; of the type Payment) Payment for the right to change the Contract

### 2.11.3 Used by:

- Complex type: ChangeContractSize
- Complex type: ContractTermination

### 2.11.4 Derived Types:

- Complex type: ChangeContractSize
- Complex type: ContractTermination

### 2.11.5 Figure:

### 2.11.6 Schema Fragment:

```

## 2.13 Collateral

### 2.13.1 Description:

A type for defining the obligations of the counterparty subject to credit support requirements

### 2.13.2 Contents:

**independentAmount** (exactly one occurrence; of the type IndependentAmount) Independent Amount is an amount that usually less creditworthy counterparties are asked to provide. It can either be a fixed amount or a percentage of the Transaction's value. The Independent Amount can be: (i) transferred before any trading between the parties occurs (as a deposit at a third party's account or with the counterparty) or (ii) callable after trading has occurred (typically because a downgrade has occurred). In situation (i), the Independent Amount is not included in the calculation of Exposure, but in situation (ii), it is included in the calculation of Exposure. Thus, for situation (ii), the Independent Amount may be transferred along with any collateral call. Independent Amount is a defined term in the ISDA Credit Support Annex. ("with respect to a party, the amount specified as such for that party in Paragraph 13; if no amount is specified, zero")

### 2.13.3 Used by:

- Complex type: Contract
- Complex type: Trade

### 2.13.4 Derived Types:

### 2.13.5 Figure:

### 2.13.6 Schema Fragment:

## 2.14 Contract

### 2.14.1 Description:

### 2.14.2 Contents:

**header** (exactly one occurrence; of the type ContractHeader)

**product** (exactly one occurrence; of the type Product) An abstract element used as a place holder for the substituting product elements.

**otherPartyPayment** (zero or more occurrences; of the type Payment) Other fees or additional payments associated with the contract, e.g. broker commissions, where one or more of the parties involved are not principal parties involved in the contract

**calculationAgent** (zero or one occurrence; of the type CalculationAgent) The ISDA Calculation Agent responsible for performing duties associated with an optional early termination

**calculationAgentBusinessCenter** (zero or one occurrence; of the type BusinessCenter) The city in which the office through which ISDA Calculation Agent is acting for purposes of the transaction is located The short-form confirm for a trade that is executed under a Sovereign or Asia Pacific Master Confirmation Agreement ( MCA ), does not need to specify the Calculation Agent. However, the confirm does need to specify the Calculation Agent City. This is due to the fact that the MCA sets the value for Calculation Agent but does not set the value for Calculation Agent City.

**collateral** (zero or one occurrence; of the type Collateral) Defines collateral obligations of a Party

**documentation** (zero or one occurrence; of the type Documentation) Defines the definitions that govern the document and should include the year and type of definitions referenced, along with any relevant documentation (such as master agreement) and the date it was signed

**governingLaw** (zero or one occurrence; of the type GoverningLaw) Governing Law applicable to this Contract

### 2.14.3 Used by:

    </xsd:extension>
  </xsd:simpleContent>
</xsd:complexType>
```

## 2.17 ContractIdentifier

### 2.17.1 Description:

A type defining a contract identifier issued by the indicated party.

### 2.17.2 Contents:

**partyReference** (exactly one occurrence; of the type PartyReference) A pointer style reference to a party identifier defined elsewhere in the document. The party referenced has allocated the contract identifier.

Either

**contractId** (one or more occurrences; of the type ContractId)

Or

**versionedContractId** (one or more occurrences; of the type VersionedContractId)

### 2.17.3 Used by:

- Complex type: ContractHeader
- Complex type: ContractReference

### 2.17.4 Derived Types:

### 2.17.5 Figure:

### 2.17.6 Schema Fragment:

  </xsd:sequence>
  <xsd:attribute name="id" type="xsd:ID"/>
</xsd:complexType>
```

## 2.18 ContractInformation

### 2.18.1 Description:

A type defining additional contract information issued by the indicated party. This type will typically be used as an extension point for contract processing information, in the same way that an extension point is provided for trade processing information.

### 2.18.2 Contents:

**partyReference** (exactly one occurrence; of the type PartyReference) Identifies that party that has ownership of this information.

### 2.18.3 Used by:

- Complex type: ContractHeader

### 2.18.4 Derived Types:

### 2.18.5 Figure:

### 2.18.6 Schema Fragment:

```
<xsd:complexType name="ContractInformation">
  <xsd:annotation>

        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
  </xsd:sequence>
</xsd:complexType>
```

## 2.19 ContractNovation

### 2.19.1 Description:

Details of the Contract Novation

### 2.19.2 Contents:

**transferor** (exactly one occurrence; of the type PartyReference) A pointer style reference to a party identifier defined elsewhere in the document. In a three-way novation the party referenced is the Transferor (outgoing party) in the novation. The Transferor means a party which transfers by novation to a Transferee all of its rights, liabilities, duties and obligations with respect to a Remaining Party. In a four-way novation the party referenced is Transferor 1 which transfers by novation to Transferee 1 all of its rights, liabilities, duties and obligations with respect to Transferor 2. ISDA 2004 Novation Term: Transferor (three-way novation) or Transferor 1 (four-way novation).

**transferee** (exactly one occurrence; of the type PartyReference) A pointer style reference to a party identifier defined elsewhere in the document. In a three-way novation the party referenced is the Transferee (incoming party) in the novation. Transferee means a party which accepts by way of novation all rights, liabilities, duties and obligations of a Transferor with respect to a Remaining Party. In a four-way novation the party referenced is Transferee 1 which accepts by way of novation the rights, liabilities, duties and obligations of Transferor 1. ISDA 2004 Novation Term: Transferee (three-way novation) or Transferee 1 (four-way novation).

**remainingParty** (exactly one occurrence; of the type PartyReference) A pointer style reference to a party identifier defined elsewhere in the document. In a three-way novation the party referenced is the Remaining Party in the novation. Remaining Party means a party which consents to a Transferor's transfer by novation and the acceptance thereof by the Transferee of all of the Transferor's rights, liabilities, duties and obligations with respect to such Remaining Party under and with respect of the Novated Amount of a transaction. In a four-way novation the party referenced is Transferor 2 per the ISDA definition and acts in the role of a Transferor. Transferor 2 transfers by novation to Transferee 2 all of its rights, liabilities, duties and obligations with respect to Transferor 1. ISDA 2004 Novation Term: Remaining Party (three-way novation) or Transferor 2 (four-way novation).

**otherRemainingParty** (zero or one occurrence; of the type PartyReference) A pointer style reference to a party identifier defined elsewhere in the document. This element is not applicable in a three-way novation and should be omitted. In a four-way novation the party referenced is Transferee 2. Transferee 2 means a party which accepts by way of novation the rights, liabilities, duties and obligations of Transferor 2. ISDA 2004 Novation Term: Transferee 2 (four-way novation).

**novationDate** (exactly one occurrence; of the type xsd:date) Specifies the date that one party's legal obligations with regard to a trade are transferred to another party. It corresponds to the Novation Date section of the 2004 ISDA Novation Definitions, section 1.16.

**novationContractDate** (zero or one occurrence; of the type xsd:date) Specifies the date the parties agree to assign or novate a Contract. If this element is not specified, the novationContractDate will be deemed to be the novationDate. It corresponds to the Novation Trade Date section of the 2004 ISDA Novation Definitions, section 1.17.

Either

**novatedAmount** (exactly one occurrence; of the type Money) The amount which represents the portion of the Old Contract being novated.

Or

**novatedNumberOfOptions** (exactly one occurrence; of the type xsd:decimal) The number of options which represent the portion of the Old Contract being novated.

Or

**novatedNumberOfUnits** (exactly one occurrence; of the type xsd:decimal) The number of options which represent the portion of the Old Contract being novated.

**fullFirstCalculationPeriod** (zero or one occurrence; of the type xsd:boolean) This element corresponds to the applicability of the Full First Calculation Period as defined in the 2004 ISDA Novation Definitions, section 1.20.

**firstPeriodStartDate** (zero or one occurrence; of the type FirstPeriodStartDate) Element that is used to be able to make sense of the "new transaction" without requiring reference back to the "old transaction". In the case of interest rate products there are potentially 2 "first period start dates" to reference – one with respect to each party to the new transaction. For Credit Default Swaps there is just the one with respect to the party that is the fixed rate payer.

**nonReliance** (zero or one occurrence; of the type Empty) This element corresponds to the non-Reliance section in the 2004 ISDA Novation Definitions, section 2.1 (c) (i). The element appears in the instance document when non-Reliance is applicable.

**creditDerivativesNotices** (zero or one occurrence; of the type CreditDerivativesNotices) This element should be specified if one or more of either a Credit Event Notice, Notice of Publicly Available Information, Notice of Physical Settlement or Notice of Intended Physical Settlement, as applicable, has been delivered by or to the Transferor or the Remaining Party. The type of notice or notices that have been delivered should be indicated by setting the relevant boolean element value(s) to true. The absence of the element means that no Credit Event Notice, Notice of Publicly Available Information, Notice of Physical Settlement or Notice of Intended Physical Settlement, as applicable, has been delivered by or to the Transferor or the Remaining Party.

**contractualDefinitions** (zero or more occurrences; of the type ContractualDefinitions) The definitions (such as those published by ISDA) that will define the terms of the novation transaction.

**contractualTermsSupplement** (zero or more occurrences; of the type ContractualTermsSupplement) A contractual supplement (such as those published by ISDA) that will apply to the trade.

**payment** (zero or one occurrence; of the type Payment)

### 2.19.3 Used by:

  </xsd:annotation>
  <xsd:complexContent>
    <xsd:extension base="ChangeContract" />
  </xsd:complexContent>
</xsd:complexType>
```

## 2.22 CreditDerivativesNotices

### 2.22.1 Description:

### 2.22.2 Contents:

**creditEvent** (exactly one occurrence; of the type xsd:boolean) This element corresponds to the Credit Event Notice Delivered Under Old Transaction and Deemed Delivered Under New Transaction under the EXHIBIT C to 2004 ISDA Novation Definitions.

**publiclyAvailableInformation** (exactly one occurrence; of the type xsd:boolean) This element corresponds to the Notice of Publicly Available Information Delivered Under Old Transaction and Deemed Delivered Under New Transaction under the EXHIBIT C to 2004 ISDA Novation Definitions.

**physicalSettlement** (exactly one occurrence; of the type xsd:boolean) This element corresponds to the Notice of Intended Physical Settlement Delivered Under Old Transaction under the EXHIBIT C to 2004 ISDA Novation Definitions.

### 2.22.3 Used by:

### 2.22.4 Derived Types:

### 2.22.5 Figure:

### 2.22.6 Schema Fragment:

## 2.23 DataDocument

### 2.23.1 Description:

A type defining a content model that is backwards compatible with older FpML releases and which can be used to contain sets of data without expressing any processing intention.

### 2.23.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type Document)

- The abstract base type from which all FpML compliant messages and documents must be derived.

**validation** (zero or more occurrences; of the type Validation)

**party** (zero or more occurrences; of the type Party) An entity having a role in a trade lifecycle. For example, the principal parties obligated to make payments from time to time during the term of the trade, but may include other parties involved in, or incidental to, the trade, such as parties acting in the role of novation transferor/transferee, broker, calculation agent, etc.

### 2.23.3 Used by:

- Complex type: ValuationDocument

### 2.23.4 Derived Types:

- Complex type: ValuationDocument

### 2.23.5 Figure:

  </xsd:simpleContent>
</xsd:complexType>
```

## 2.27 FirstPeriodStartDate

### 2.27.1 Description:

### 2.27.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type xsd:date)

•

### 2.27.3 Used by:

### 2.27.4 Derived Types:

### 2.27.5 Figure:

### 2.27.6 Schema Fragment:

```
<xsd:complexType name="FirstPeriodStartDate">
  <xsd:simpleContent>
    <xsd:extension base="xsd:date">
      <xsd:attribute name="href" use="required" type="xsd:IDREF" ecore:reference="Party"/>
    </xsd:extension>
  </xsd:simpleContent>
</xsd:complexType>
```

## 2.28 Increase

### 2.28.1 Description:

An event type that defines the content of an Increase transaction.

### 2.28.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type Event)

- A type defining the basic structure of FpML business events; it is refined by its derived types.

Either

**trade** (exactly one occurrence; of the type Trade) An element that allows the full details of the trade to be used as a mechanism for identifying the trade for which the post-trade event pertains

Or

**tradeReference** (exactly one occurrence; of the type PartyTradeIdentifiers) A container since an individual trade can be referenced by two or more different partyTradeIdentifier elements - each allocated by a different party.

**increaseTradeDate** (exactly one occurrence; of the type xsd:date) The date on which the the parties enter into the Increase transaction

**increaseEffectiveDate** (exactly one occurrence; of the type xsd:date) The date on which the Increase becomes effective

**payment** (zero or one occurrence; of the type Payment) A payment for the right to increase the trade.

### 2.28.3 Used by:

- Complex type: IncreaseConfirmed
- Complex type: RequestIncreaseConfirmation
- Complex type: TradeIncreaseRequest
- Complex type: TradeIncreaseResponse

### 2.28.4 Derived Types:

### 2.28.5 Figure:

### 2.28.6 Schema Fragment:

```
<xsd:complexType name="Increase">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      An event type that defines the content of an Increase
      transaction.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:complexContent>
    <xsd:extension base="Event">
      <xsd:sequence>
        <xsd:group ref="TradeOrTradeReference.model"/>
        <xsd:group ref="IncreaseDetails.model"/>
        <xsd:element name="payment" type="Payment" minOccurs="0">
          <xsd:annotation>
            <xsd:documentation xml:lang="en">
              A payment for the right to increase the trade.
            </xsd:documentation>
          </xsd:annotation>
        </xsd:element>
      </xsd:sequence>
    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

## 2.29 IndependentAmount

### 2.29.1 Description:

### 2.29.2 Contents:

**payerPartyReference** (exactly one occurrence; of the type PartyOrAccountReference) A reference to the party responsible for making the payments defined by this structure.

**receiverPartyReference** (exactly one occurrence; of the type PartyOrAccountReference) A reference to the party that receives the payments corresponding to this structure.

**paymentDetail** (one or more occurrences; of the type PaymentDetail) A container element allowing a schedule of payments associated with the Independent Amount.

### 2.29.3 Used by:

- Complex type: Collateral

### 2.29.4 Derived Types:

### 2.29.5 Figure:

### 2.29.6 Schema Fragment:

```
<xsd:complexType name="IndependentAmount">
  <xsd:sequence>
    <xsd:group ref="PayerReceiver.model"/>
    <xsd:element name="paymentDetail" type="PaymentDetail" maxOccurs="unbounded">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          A container element allowing a schedule of payments
          associated with the Independent Amount.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
  </xsd:sequence>
</xsd:complexType>
```

## 2.30 LinkId

### 2.30.1 Description:

The data type used for link identifiers.

### 2.30.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type `xsd:normalizedString`)

•

### 2.30.3 Used by:

- Complex type: `PartyTradeIdentifier`

### 2.30.4 Derived Types:

### 2.30.5 Figure:

### 2.30.6 Schema Fragment:

```
<xsd:complexType name="LinkId">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      The data type used for link identifiers.
    </xsd:documentation>

      <xsd:attribute name="id" type="xsd:ID"/>
      <xsd:attribute name="linkIdScheme" type="xsd:anyURI" use="required"/>
    </xsd:extension>
  </xsd:simpleContent>
</xsd:complexType>
```

## 2.31 Party

### 2.31.1 Description:

A type defining party information.

### 2.31.2 Contents:

**partyId** (one or more occurrences; of the type PartyId) A party identifier, e.g. a S.W.I.F.T. bank identifier code (BIC).

**partyName** (zero or one occurrence; of the type xsd:normalizedString) The name of the party. A free format string. FpML does not define usage rules for this element.

**account** (zero or more occurrences; of the type Account) Accounts serviced by this party. These are not accounts where this party is beneficiary, but instead where they are provided and by this party to the beneficiary party.

### 2.31.3 Used by:

- Complex type: AcceptQuote
- Complex type: AllocationAmended
- Complex type: AllocationCancelled
- Complex type: AllocationCreated
- Complex type: AmendmentConfirmed
- Complex type: CancelTradeCashflows
- Complex type: CancelTradeConfirmation

    </xsd:extension>
  </xsd:simpleContent>
</xsd:complexType>
```

## 2.33 PartyPortfolioName

### 2.33.1 Description:

A type to represent a portfolio name for a particular party.

### 2.33.2 Contents:

**partyReference** (exactly one occurrence; of the type PartyReference) A pointer style reference to a party identifier defined elsewhere in the document. The party referenced has allocated the trade identifier.

**portfolioName** (one or more occurrences; of the type PortfolioName)

### 2.33.3 Used by:

- Complex type: Portfolio

### 2.33.4 Derived Types:

### 2.33.5 Figure:

### 2.33.6 Schema Fragment:

```
<xsd:complexType name="PartyPortfolioName">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">

          A pointer style reference to a party identifier defined
          elsewhere in the document. The party referenced has allocated
          the trade identifier.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
    <xsd:element name="portfolioName" type="PortfolioName" maxOccurs="unbounded"/>
  </xsd:sequence>
  <xsd:attribute name="id" type="xsd:ID"/>
</xsd:complexType>
```

## 2.34 PartyRole

### 2.34.1 Description:

A generic party role type. This can be extended to provide specialization of roles.

### 2.34.2 Contents:

Either

**party** (exactly one occurrence; of the type PartyReference) A reference to the party fulfilling this role.

Or

**account** (exactly one occurrence; of the type AccountReference) A reference to the account fulfilling this role.

### 2.34.3 Used by:

- Complex type: TradeSide

### 2.34.4 Derived Types:

### 2.34.5 Figure:

### 2.34.6 Schema Fragment:

```
<xsd:complexType name="PartyRole">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A generic party role type. This can be extended to provide
      specialization of roles.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:choice>
    <xsd:annotation>
      <xsd:documentation xml:lang="en">
        The party fulfilling this role can be identified either
        directly, or indirectly via the account used to fulfil this
        role.
      </xsd:documentation>
    </xsd:annotation>
    <xsd:element name="party" type="PartyReference">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          A reference to the party fulfilling this role.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
    <xsd:element name="account" type="AccountReference">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          A reference to the account fulfilling this role.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
  </xsd:choice>
</xsd:complexType>
```

## 2.35 PartyTradeIdentifier

### 2.35.1 Description:

A type defining one or more trade identifiers allocated to the trade by a party. A link identifier allows the trade to be associated with other related trades, e.g. trades forming part of a larger structured transaction. It is expected that for external communication of trade there will be only one tradeId sent in the document per party.

### 2.35.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type TradeIdentifier)

- A type defining a trade identifier issued by the indicated party.

**linkId** (zero or more occurrences; of the type LinkId) A link identifier allowing the trade to be associated with other related trades, e.g. the linkId may contain a tradeId for an associated trade or several related trades may be given the same linkId. FpML does not define the domain values associated with this element. Note that the domain values for this element are not strictly an enumerated list.

### 2.35.3 Used by:

- Complex type: AllocationTradeIdentifier
- Complex type: BlockTradeIdentifier
- Complex type: Allocation
- Complex type: AllocationCancelled
- Complex type: AllocationTradeIdentifier
- Complex type: BlockTradeIdentifier
- Complex type: CancelTradeConfirmation
- Complex type: CancelTradeMatch
- Complex type: ConfirmTrade
- Complex type: PartyTradeIdentifiers
- Complex type: TradeAmendment
- Complex type: TradeHeader
- Complex type: TradeIdentifyingItems
- Complex type: TradeValuationItem

### 2.35.4 Derived Types:

- Complex type: AllocationTradeIdentifier
- Complex type: BlockTradeIdentifier

### 2.35.5 Figure:

### 2.35.6 Schema Fragment:

```
<xsd:complexType name="PartyTradeIdentifier">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A type defining one or more trade identifiers allocated to the
      trade by a party. A link identifier allows the trade to be
      associated with other related trades, e.g. trades forming part of
      a larger structured transaction. It is expected that for external
      communication of trade there will be only one tradeId sent in the
      document per party.

    <xsd:element name="partyTradeIdentifier" type="PartyTradeIdentifier" maxOccurs="unbounded"/>
  </xsd:sequence>
</xsd:complexType>
```

## 2.37 PartyTradeInformation

### 2.37.1 Description:

A type defining additional information that may be recorded against a trade.

### 2.37.2 Contents:

**partyReference** (exactly one occurrence; of the type PartyReference) Identifies that party that has ownership of this information.

**trader** (zero or more occurrences; of the type Trader) Identifies the person or persons who assumed the role of trader for this trade.

### 2.37.3 Used by:

- Complex type: TradeHeader

### 2.37.4 Derived Types:

### 2.37.5 Figure:

### 2.37.6 Schema Fragment:

```
<xsd:complexType name="PartyTradeInformation">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A type defining additional information that may be recorded
      against a trade.
    </xsd:documentation>

          trader for this trade.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
  </xsd:sequence>
</xsd:complexType>
```

## 2.38 PaymentDetail

### 2.38.1 Description:

### 2.38.2 Contents:

Either

**adjustablePaymentDate** (exactly one occurrence; of the type AdjustableDate2) A fixed amount payment date that shall be subject to adjustment in accordance with the applicable business day convention if it would otherwise fall on a day that is not a business day. The applicable business day convention and business day are those specified in the dateAdjustments element within the generalTerms component. ISDA 2003 Term: Fixed Rate Payer Payment Date

Or

**adjustedPaymentDate** (exactly one occurrence; of the type xsd:date) The adjusted payment date. This date should already be adjusted for any applicable business day convention. This component is not intended for use in trade confirmation but may be specified to allow the fee structure to also serve as a cashflow type component.

Either

**paymentAmount** (exactly one occurrence; of the type Money) A fixed payment amount.

### 2.38.3 Used by:

- Complex type: IndependentAmount

### 2.38.4 Derived Types:

### 2.38.5 Figure:

### 2.38.6 Schema Fragment:

  </xsd:annotation>
</xsd:complexType>
```

## 2.40 PercentageRule

### 2.40.1 Description:

A type defining a content model for a calculation rule defined as percentage of the notional amount.

### 2.40.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type PaymentRule)

- The abstract base type from which all calculation rules of the independent amount must be derived.

**paymentPercent** (exactly one occurrence; of the type xsd:decimal) A percentage of the notional amount.

**notionalAmountReference** (exactly one occurrence; of the type NotionalAmountReference) A reference to the notional amount.

### 2.40.3 Used by:

### 2.40.4 Derived Types:

### 2.40.5 Figure:

### 2.40.6 Schema Fragment:

          </xsd:annotation>
        </xsd:element>
      </xsd:sequence>
    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

## 2.41 Portfolio

### 2.41.1 Description:

A type representing an arbitrary grouping of trade references.

### 2.41.2 Contents:

**partyPortfolioName** (zero or one occurrence; of the type PartyPortfolioName) The name of the portfolio together with the party that gave the name.

**tradeId** (zero or more occurrences; of the type TradeId)

**portfolio** (zero or more occurrences; of the type Portfolio) An arbitrary grouping of trade references (and possibly other portfolios).

### 2.41.3 Used by:

- Element: portfolio
- Complex type: QueryPortfolio
- Complex type: DataDocument
- Complex type: Portfolio

### 2.41.4 Derived Types:

- Complex type: QueryPortfolio

    </xsd:element>
  </xsd:sequence>
  <xsd:attribute name="id" type="xsd:ID"/>
</xsd:complexType>
```

## 2.42 PortfolioName

### 2.42.1 Description:

The data type used for portfolio names.

### 2.42.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type `xsd:normalizedString`)

- 

### 2.42.3 Used by:

- Complex type: `PartyPortfolioName`

### 2.42.4 Derived Types:

### 2.42.5 Figure:

### 2.42.6 Schema Fragment:

```
<xsd:complexType name="PortfolioName">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      The data type used for portfolio names.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:simpleContent>
    <xsd:extension base="xsd:normalizedString">
      <xsd:attribute name="id" type="xsd:ID"/>
      <xsd:attribute name="portfolioNameScheme" type="xsd:anyURI"/>
    </xsd:extension>
  </xsd:simpleContent>
</xsd:complexType>
```

## 2.43 QueryParameter

### 2.43.1 Description:

A type representing criteria for defining a query portfolio. The criteria are made up of a QueryParameterId, QueryParameterValue and QueryParameterOperator.

### 2.43.2 Contents:

**queryParameterId** (exactly one occurrence; of the type QueryParameterId)

**queryParameterValue** (zero or one occurrence; of the type xsd:normalizedString)

**queryParameterOperator** (zero or one occurrence; of the type QueryParameterOperator)

### 2.43.3 Used by:

- Complex type: QueryPortfolio

### 2.43.4 Derived Types:

### 2.43.5 Figure:

### 2.43.6 Schema Fragment:

```
<xsd:complexType name="QueryParameter">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A type representing criteria for defining a query portfolio. The
      criteria are made up of a QueryParameterId, QueryParameterValue
      and QueryParameterOperator.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:sequence>
    <xsd:element name="queryParameterId" type="QueryParameterId"/>
    <xsd:element name="queryParameterValue" type="xsd:normalizedString" minOccurs="0"/>
    <xsd:element name="queryParameterOperator" type="QueryParameterOperator" minOccurs="0"/>
  </xsd:sequence>
</xsd:complexType>
```

## 2.44 QueryParameterId

### 2.44.1 Description:

A type representing an identifier for a parameter describing a query portfolio. An identifier can be anything from a product name like swap to a termination date.

### 2.44.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type xsd:normalizedString)

•

### 2.44.3 Used by:

- Complex type: QueryParameter

### 2.44.4 Derived Types:

### 2.44.5 Figure:

### 2.44.6 Schema Fragment:

```
<xsd:complexType name="QueryParameterId">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A type representing an identifier for a parameter describing a
      query portfolio. An identifier can be anything from a product
      name like swap to a termination date.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:simpleContent>
    <xsd:extension base="xsd:normalizedString">

      <xsd:attribute name="id" type="xsd:ID"/>
    </xsd:extension>
  </xsd:simpleContent>
</xsd:complexType>
```

## 2.45 QueryParameterOperator

### 2.45.1 Description:

A type representing an operator describing the relationship of a value to its corresponding identifier for a parameter describing a query portfolio. Possible relationships include equals, not equals, less than, greater than. Possible operators are listed in the queryParameterOperatorScheme.

### 2.45.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type xsd:normalizedString)

•

### 2.45.3 Used by:

- Complex type: QueryParameter

### 2.45.4 Derived Types:

### 2.45.5 Figure:

### 2.45.6 Schema Fragment:

<xsd:complexType name="QueryParameterOperator">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A type representing an operator describing the relationship of a
      value to its corresponding identifier for a parameter describing
      a query portfolio. Possible relationships include equals, not
      equals, less than, greater than. Possible operators are listed in
      the queryParameterOperatorScheme.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:simpleContent>
    <xsd:extension base="xsd:normalizedString">
      <xsd:attribute name="queryParameterOperatorScheme" type="xsd:anyURI" default="http://www.
      <xsd:attribute name="id" type="xsd:ID"/>
    </xsd:extension>
  </xsd:simpleContent>
</xsd:complexType>
```

## 2.46 QueryPortfolio

### 2.46.1 Description:

A type representing a portfolio obtained by querying the set of trades held in a repository. It contains trades matching the intersection of all criteria specified using one or more queryParameters or trades matching the union of two or more child queryPortfolios.

### 2.46.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type Portfolio)

- A type representing an arbitrary grouping of trade references.

**queryParameter** (one or more occurrences; of the type QueryParameter)

### 2.46.3 Used by:

- Element: queryPortfolio

### 2.46.4 Derived Types:

### 2.46.5 Figure:

### 2.46.6 Schema Fragment:

```
<xsd:complexType name="QueryPortfolio">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A type representing a portfolio obtained by querying the set of
      trades held in a repository. It contains trades matching the
      intersection of all criteria specified using one or more
      queryParameters or trades matching the union of two or more child
      queryPortfolios.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:complexContent>
    <xsd:extension base="Portfolio">

      </xsd:sequence>
    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

## 2.47 Strategy

### 2.47.1 Description:

A type defining a group of products making up a single trade.

### 2.47.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type Product)

- The base type which all FpML products extend.

**premiumProductReference** (zero or one occurrence; of the type ProductReference) Indicates which product within a strategy represents the premium payment.

**product** (one or more occurrences; of the type Product) An abstract element used as a place holder for the substituting product elements.

### 2.47.3 Used by:

- Element: strategy

### 2.47.4 Derived Types:

### 2.47.5 Figure:

### 2.47.6 Schema Fragment:

```
<xsd:complexType name="Strategy">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A type defining a group of products making up a single trade.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:complexContent>
    <xsd:extension base="Product">
      <xsd:sequence>
        <xsd:element name="premiumProductReference" type="ProductReference" minOccurs="0">
          <xsd:annotation>
            <xsd:documentation xml:lang="en">
              Indicates which product within a strategy represents the
              premium payment.
            </xsd:documentation>
          </xsd:annotation>
        </xsd:element>
        <xsd:element ref="product" maxOccurs="unbounded"/>
      </xsd:sequence>
    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

## 2.48 Trade

### 2.48.1 Description:

A type defining an FpML trade.

### 2.48.2 Contents:

**tradeHeader** (exactly one occurrence; of the type TradeHeader) The information on the trade which is not product specific, e.g. trade date.

**product** (exactly one occurrence; of the type Product) An abstract element used as a place holder for the substituting product elements.

**otherPartyPayment** (zero or more occurrences; of the type Payment) Other fees or additional payments associated with the trade, e.g. broker commissions, where one or more of the parties involved are not principal parties involved in the trade.

**brokerPartyReference** (zero or more occurrences; of the type PartyReference) Identifies that party (or parties) that brokered this trade.

**calculationAgent** (zero or one occurrence; of the type CalculationAgent) The ISDA Calculation Agent responsible for performing duties associated with an optional early termination

**calculationAgentBusinessCenter** (zero or one occurrence; of the type BusinessCenter) The city in which the office through which ISDA Calculation Agent is acting for purposes of the transaction is located The short-form confirm for a trade that is executed under a Sovereign or Asia Pacific Master Confirmation Agreement ( MCA ), does not need to specify the Calculation Agent. However, the confirm does need to specify the Calculation Agent City. This is due to the fact that the MCA sets the value for Calculation Agent but does not set the value for Calculation Agent City.

**collateral** (zero or one occurrence; of the type Collateral) Defines collateral obligations of a Party

**documentation** (zero or one occurrence; of the type Documentation) Defines the definitions that govern the document and should include the year and type of definitions referenced, along with any relevant documentation (such as master agreement) and the date it was signed.

**governingLaw** (zero or one occurrence; of the type GoverningLaw) TBA

**allocations** (zero or one occurrence; of the type Allocations) "Short-form" representation of allocations in which the key block economics are stated once within the trade structure, and the allocation data is contained in this allocations structure.

**tradeSide** (zero or one occurrence; of the type TradeSide) The parties to the Trade are grouped into Trade Sides. Each Trade has as many as two sides. Each side is a buyer or receiver of each leg or stream.

### 2.48.3 Used by:

- Complex type: AcceptQuote
- Complex type: AllocationCancelled
- Complex type: AllocationCreated
- Complex type: Amendment
- Complex type: DataDocument
- Complex type: ModifyTradeConfirmation
- Complex type: ModifyTradeMatch
- Complex type: PositionConstituent
- Complex type: QuoteAcceptanceConfirmed
- Complex type: RequestTradeConfirmation
- Complex type: RequestTradeMatch
- Complex type: TradeAffirmation
- Complex type: TradeAmended
- Complex type: TradeAmendment
- Complex type: TradeCancelled
- Complex type: TradeConfirmed
- Complex type: TradeCreated

- Complex type: TradeValuationItem

## 2.49 TradeDifference

### 2.49.1 Description:

A type used to record the details of a difference between two business objects/

### 2.49.2 Contents:

**differenceType** (exactly one occurrence; of the type DifferenceTypeEnum) The type of difference that exists.

**differenceSeverity** (exactly one occurrence; of the type DifferenceSeverityEnum) An indication of the severity of the difference.

**element** (exactly one occurrence; of the type xsd:string) The name of the element affected.

**basePath** (zero or one occurrence; of the type xsd:string) XPath to the element in the base object.

**baseValue** (zero or one occurrence; of the type xsd:string) The value of the element in the base object.

**otherPath** (zero or one occurrence; of the type xsd:string) XPath to the element in the other object.

**otherValue** (zero or one occurrence; of the type xsd:string) Value of the element in the other trade.

**missingElement** (zero or more occurrences; of the type xsd:string) Element(s) that are missing in the other trade.

**extraElement** (zero or more occurrences; of the type xsd:string) Element(s) that are extraneous in the other object.

**message** (exactly one occurrence; of the type xsd:string) A human readable description of the problem.

### 2.49.3 Used by:

```

## 2.54 TradeSide

### 2.54.1 Description:

The parties to the trade form into sides. Each side has defined roles in the lifecycle of the trade fulfilled by parties. Each party role is given in the likely order they would be filled during the lifecycle of a trade.

### 2.54.2 Contents:

**orderer** (zero or one occurrence; of the type PartyRole) The Party placing the order. This could be a fund manager acting on behalf of a client, or a hedge fund acting on it's own behalf. This is the role with the investment discretion.

**introducer** (zero or one occurrence; of the type PartyRole) Party that can relay an order directly to the trading floor at a firm. This is potentially a different firm, but may be the same as that taking the order. In effect the introducer is the first dealer to take the order. The reason an introducing dealer may forward a trade is sometime because it doesn't have the capacity to execute effectively but does have the relationship with the Orderer. Introducing Party is an industry standard term. This is semantically equivalent to the FIX and ISO20022 Introducing Firm.

**executor** (zero or one occurrence; of the type PartyRole) The Party executing or striking the trade. Executing Party is an industry standard term. This is semantically equivalent to the FIX and ISO20022 Executing Firm or Trader.

**confirmer** (zero or one occurrence; of the type PartyRole) The party that undertakes the confirmation process for this Trade Side. The confirmer essentially manages the matching and affirmation of trades. This is often the creditor or is increasingly outsourced to service providers such as Swapsware.

**creditor** (exactly one occurrence; of the type PartyRole) The party whose name appears on the contract as being responsible for credit of the trade. This is the party in the Trade Side the credit risk is against. For example if a hedge fund was to trade in the name of it's prime broker, then the prime broker would be the creditor.

**calculator** (zero or one occurrence; of the type PartyRole) The calculator is the Party that calculates, negotiates, and agrees the values to be paid at each payment date.

**settler** (zero or one occurrence; of the type PartyRole) The Settler is the party that makes the payments. Increasingly this is a service that can be externalized from the other roles. An example of a settlement service provide is SwapClear.

**beneficiary** (zero or one occurrence; of the type PartyRole) The party that suffers the economic effect of the trade. This is usually referred to as the primary Principal in FIX and ISO20022 - which is slightly confusing in that there are potentially many Principapal/Agency relationships. The beneficiary may be distinct from the creditor - an example is a Hedge Fund trading in the name of it's Prime Broker.

**accountant** (zero or more occurrences; of the type PartyRole) The Accountants for the trade. There are potentially many accountants. This is known in FIX and ISO20022 for Collective Investment Vehicles as the Third Party Administrator (TPA), however all trades for all parties have at least one party accounting for the trade.

  </xsd:sequence>
</xsd:group>
```

## 4.5 ContractNovationDetails.model

### 4.5.1 Description:

### 4.5.2 Contents:

**transferor** (exactly one occurrence; of the type PartyReference) A pointer style reference to a party identifier defined elsewhere in the document. In a three-way novation the party referenced is the Transferor (outgoing party) in the novation. The Transferor means a party which transfers by novation to a Transferee all of its rights, liabilities, duties and obligations with respect to a Remaining Party. In a four-way novation the party referenced is Transferor 1 which transfers by novation to Transferee 1 all of its rights, liabilities, duties and obligations with respect to Transferor 2. ISDA 2004 Novation Term: Transferor (three-way novation) or Transferor 1 (four-way novation).

**transferee** (exactly one occurrence; of the type PartyReference) A pointer style reference to a party identifier defined elsewhere in the document. In a three-way novation the party referenced is the Transferee (incoming party) in the novation. Transferee means a party which accepts by way of novation all rights, liabilities, duties and obligations of a Transferor with respect to a Remaining Party. In a four-way novation the party referenced is Transferee 1 which accepts by way of novation the rights, liabilities, duties and obligations of Transferor 1. ISDA 2004 Novation Term: Transferee (three-way novation) or Transferee 1 (four-way novation).

**remainingParty** (exactly one occurrence; of the type PartyReference) A pointer style reference to a party identifier defined elsewhere in the document. In a three-way novation the party referenced is the Remaining Party in the novation. Remaining Party means a party which consents to a Transferor's transfer by novation and the acceptance thereof by the Transferee of all of the Transferor's rights, liabilities, duties and obligations with respect to such Remaining Party under and with respect of the Novated Amount of a transaction. In a four-way novation the party referenced is Transferor 2 per the ISDA definition and acts in the role of a Transferor. Transferor 2 transfers by novation to Transferee 2 all of its rights, liabilities, duties and obligations with respect to Transferor 1. ISDA 2004 Novation Term: Remaining Party (three-way novation) or Transferor 2 (four-way novation).

**otherRemainingParty** (zero or one occurrence; of the type PartyReference) A pointer style reference to a party identifier defined elsewhere in the document. This element is not applicable in a three-way novation and should be omitted. In a four-way novation the party referenced is Transferee 2. Transferee 2 means a party which accepts by way of novation the rights, liabilities, duties and obligations of Transferor 2. ISDA 2004 Novation Term: Transferee 2 (four-way novation).

**novationDate** (exactly one occurrence; of the type xsd:date) Specifies the date that one party's legal obligations with regard to a trade are transferred to another party. It corresponds to the Novation Date section of the 2004 ISDA Novation Definitions, section 1.16.

**novationContractDate** (zero or one occurrence; of the type xsd:date) Specifies the date the parties agree to assign or novate a Contract. If this element is not specified, the novationContractDate will be deemed to be the novationDate. It corresponds to the Novation Trade Date section of the 2004 ISDA Novation Definitions, section 1.17.

Either

**novatedAmount** (exactly one occurrence; of the type Money) The amount which represents the portion of the Old Contract being novated.

Or

**novatedNumberOfOptions** (exactly one occurrence; of the type xsd:decimal) The number of options which represent the portion of the Old Contract being novated.

Or

**novatedNumberOfUnits** (exactly one occurrence; of the type xsd:decimal) The number of options which represent the portion of the Old Contract being novated.

**fullFirstCalculationPeriod** (zero or one occurrence; of the type xsd:boolean) This element corresponds to the applicability of the Full First Calculation Period as defined in the 2004 ISDA Novation Definitions, section 1.20.

**firstPeriodStartDate** (zero or one occurrence; of the type FirstPeriodStartDate) Element that is used to be able to make sense of the "new transaction" without requiring reference back to the "old transaction". In the case of interest rate products there are potentially 2 "first period start dates" to reference – one with respect to each party to the new transaction. For Credit Default Swaps there is just the one with respect to the party that is the fixed rate payer.

**nonReliance** (zero or one occurrence; of the type Empty) This element corresponds to the non-Reliance section in the 2004 ISDA Novation Definitions, section 2.1 (c) (i). The element appears in the instance

document when non-Reliance is applicable.

**creditDerivativesNotices** (zero or one occurrence; of the type CreditDerivativesNotices) This element should be specified if one or more of either a Credit Event Notice, Notice of Publicly Available Information, Notice of Physical Settlement or Notice of Intended Physical Settlement, as applicable, has been delivered by or to the Transferor or the Remaining Party. The type of notice or notices that have been delivered should be indicated by setting the relevant boolean element value(s) to true. The absence of the element means that no Credit Event Notice, Notice of Publicly Available Information, Notice of Physical Settlement or Notice of Intended Physical Settlement, as applicable, has been delivered by or to the Transferor or the Remaining Party.

**contractualDefinitions** (zero or more occurrences; of the type ContractualDefinitions) The definitions (such as those published by ISDA) that will define the terms of the novation transaction.

**contractualTermsSupplement** (zero or more occurrences; of the type ContractualTermsSupplement) A contractual supplement (such as those published by ISDA) that will apply to the trade.

## 4.6 ContractOrContractReference.model

### 4.6.1 Description:

### 4.6.2 Contents:

Either

**contract** (exactly one occurrence; of the type Contract) An element that allows the full details of the contract to be used as a mechanism for identifying the contract

Or

**contractReference** (exactly one occurrence; of the type ContractReference) A container since an individual contract can be referenced by two or more different partyTradeIdentifier elements - each allocated by a different party.

### 4.6.3 Used by:

### 4.6.4 Figure:

### 4.6.5 Schema Fragment:

```
<xsd:group name="ContractOrContractReference.model">
  <xsd:choice>
    <xsd:element name="contract" type="Contract">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          An element that allows the full details of the contract to be
          used as a mechanism for identifying the contract

      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          Independent Amount is an amount that usually less
          creditworthy counterparties are asked to provide. It can
          either be a fixed amount or a percentage of the
          Transaction's value. The Independent Amount can be: (i)
          transferred before any trading between the parties occurs
          (as a deposit at a third party's account or with the
          counterparty) or (ii) callable after trading has occurred
          (typically because a downgrade has occurred). In situation
          (i), the Independent Amount is not included in the
          calculation of Exposure, but in situation (ii), it is
          included in the calculation of Exposure. Thus, for
          situation (ii), the Independent Amount may be transferred
          along with any collateral call. Independent Amount is a
          defined term in the ISDA Credit Support Annex. ("with
          respect to a party, the amount specified as such for that
          party in Paragraph 13; if no amount is specified, zero")
