1 Global Complex Types

1.1 AssetValuation

1.1.1 Description:

A structure that holds a set of measures about an asset, including possibly their sensitivities.

1.1.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type Valuation)

- A valuation of an valuable object - an asset or a pricing input. This is an abstract type, used as a base for values of pricing structures such as yield curves as well as asset values.

quote (one or more occurrences; of the type Quotation) One or more numerical measures relating to the asset, possibly together with sensitivities of that measure to pricing inputs.

fxRate (zero or one occurrence; of the type FxRate) Indicates the rate of a currency conversion that may have been used to compute valuations.

1.1.3 Used by:

- Complex type: Position
- Complex type: ValuationSet

1.1.4 Derived Types:

1.1.5 Figure:

1.1.6 Schema Fragment:

```
<xsd:complexType name="AssetValuation">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A structure that holds a set of measures about an asset,
      including possibly their sensitivities.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:complexContent>
    <xsd:extension base="Valuation">
      <xsd:sequence>
        <xsd:element name="quote" type="Quotation" maxOccurs="unbounded">
          <xsd:annotation>
            <xsd:documentation xml:lang="en">
              One or more numerical measures relating to the asset,
              possibly together with sensitivities of that measure to
              pricing inputs.
            </xsd:documentation>
          </xsd:annotation>
        </xsd:element>
        <xsd:element name="fxRate" type="FxRate" minOccurs="0">
          <xsd:annotation>
            <xsd:documentation xml:lang="en">
              Indicates the rate of a currency conversion that may have
              been used to compute valuations.
            </xsd:documentation>
          </xsd:annotation>
        </xsd:element>
      </xsd:sequence>
    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

1.2 BasicAssetValuation

1.2.1 Description:

A structure that holds a set of measures about an asset.

1.2.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type Valuation)

- A valuation of an valuable object - an asset or a pricing input. This is an abstract type, used as a base for values of pricing structures such as yield curves as well as asset values.

quote (one or more occurrences; of the type BasicQuotation) One or more numerical measures relating to the asset, possibly together with sensitivities of that measure to pricing inputs

1.2.3 Used by:

- Complex type: QuotedAssetSet

1.2.4 Derived Types:

1.2.5 Figure:

1.2.6 Schema Fragment:

```
<xsd:complexType name="BasicAssetValuation">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A structure that holds a set of measures about an asset.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:complexContent>
    <xsd:extension base="Valuation">
      <xsd:sequence>
        <xsd:element name="quote" type="BasicQuotation" maxOccurs="unbounded">
          <xsd:annotation>
            <xsd:documentation xml:lang="en">
              One or more numerical measures relating to the asset,
              possibly together with sensitivities of that measure to
              pricing inputs
            </xsd:documentation>
          </xsd:annotation>
        </xsd:element>
      </xsd:sequence>
    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

1.3 DerivedValuationScenario

1.3.1 Description:

A valuation scenario that is derived from another valuation scenario.

1.3.2 Contents:

name (zero or one occurrence; of the type xsd:string) The (optional) name for this valuation scenario, used for understandability. For example "EOD Valuations".

baseValuationScenario (exactly one occurrence; of the type ValuationScenarioReference) An (optional) reference to a valuation scenario from which this one is derived.

valuationDate (zero or one occurrence; of the type IdentifiedDate) The (optional) date for which the assets are valued. If not present, the valuation date will be that of the base valuation scenario.

marketReference (zero or one occurrence; of the type MarketReference) A reference to the market environment used to price the asset. If not present, the market will be that of the base valuation scenario.

shift (zero or more occurrences; of the type PricingParameterShift) A collection of shifts to be applied to market inputs prior to computation of the derivative.

1.3.3 Used by:

1.3.4 Derived Types:

1.3.5 Figure:

1.3.6 Schema Fragment:

```
<xsd:complexType name="DerivedValuationScenario">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A valuation scenario that is derived from another valuation
      scenario.
    </xsd:documentation>
  </xsd:annotation>

<xsd:attribute name="id" type="xsd:ID"/>
</xsd:complexType>
```

1.4 Position

1.4.1 Description:

A collection of related trades or positions and the corresponding aggregate exposures generated by these.

1.4.2 Contents:

positionId (exactly one occurrence; of the type PositionId) A version-independent identifier for the position, possibly based on trade identifier.

version (zero or one occurrence; of the type xsd:positiveInteger) A version identifier. Version identifiers must be ascending, i.e. higher numbers imply newer versions. There is no requirement that version identifiers for a position be sequential or small, so for example timestamp-based version identifiers could be used.

reportingRoles (zero or one occurrence; of the type ReportingRoles) Information about the roles of the parties with respect to reporting the positions.

constituent (exactly one occurrence; of the type PositionConstituent) The components that create this position.

scheduledDate (zero or more occurrences; of the type ScheduledDate) Position level schedule date, such as final payment dates, in a simple and flexible format.

valuation (zero or more occurrences; of the type AssetValuation) Valuation reported for the position, such as NPV or accrued interest. The asset/object references in the valuations should refer to the deal or components of the deal in the position, e.g. legs, streams, or underlyers.

1.4.3 Used by:

- Complex type: DefinePosition
- Complex type: PositionReport

1.4.4 Derived Types:

- Complex type: DefinePosition

1.4.5 Figure:

1.4.6 Schema Fragment:

```
<xsd:complexType name="Position">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A collection of related trades or positions and the corresponding
      aggregate exposures generated by these.
    </xsd:documentation>

</xsd:annotation>
</xsd:element>
</xsd:sequence>
<xsd:attribute name="id" type="xsd:ID"/>
</xsd:complexType>
```

1.5 PositionConstituent

1.5.1 Description:

The items (trades, trade references, holdings, other positions) that comprise this position. Currently a position may consist only of a single trade, a reference to a previously submitted position, or a reference to the trade. The choice structure is optional to allow extensions to be placed within this container.

1.5.2 Contents:

Either

trade (exactly one occurrence; of the type Trade) An element that allows the full details of the trade to be used as a mechanism for identifying the trade for which the post-trade event pertains.

Or

positionVersionReference (exactly one occurrence; of the type xsd:positiveInteger) A previously submitted version of the position.

Or

tradeReference (exactly one occurrence; of the type PartyTradeIdentifiers) The trade reference identifier(s) allocated to the trade by the parties involved.

1.5.3 Used by:

- Complex type: Position

1.5.4 Derived Types:

1.5.5 Figure:

1.5.6 Schema Fragment:

```
<xsd:complexType name="PositionConstituent">

      </xsd:annotation>
    </xsd:element>
  </xsd:choice>
</xsd:complexType>
```

1.6 PositionId

1.6.1 Description:

A unique identifier for the position. The id attribute is defined for intradocument referencing.

1.6.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type xsd:normalizedString)

•

1.6.3 Used by:

1.6.4 Derived Types:

1.6.5 Figure:

1.6.6 Schema Fragment:

```
<xsd:complexType name="PositionId">

    </xsd:extension>
  </xsd:simpleContent>
</xsd:complexType>
```

1.7 PricingInputReplacement

1.7.1 Description:

The substitution of a pricing input (e.g. curve) for another, used in generating prices and risks for valuation scenarios.

1.7.2 Contents:

originalInputReference (exactly one occurrence; of the type PricingStructureReference) A reference to the original value of the pricing input.

replacementInputReference (exactly one occurrence; of the type PricingStructureReference) A reference to the substitution to do.

1.7.3 Used by:

- Complex type: ValuationScenario

1.7.4 Derived Types:

1.7.5 Figure:

1.7.6 Schema Fragment:

        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
  </xsd:sequence>
</xsd:complexType>
```

1.8 Quotation

1.8.1 Description:

Some kind of numerical measure about an asset, eg. its NPV, together with characteristics of that measure, together with optional sensitivities.

1.8.2 Contents:

value (zero or one occurrence; of the type xsd:decimal) The value of the the quotation.

sensitivitySet (zero or more occurrences; of the type SensitivitySet) Zero or more sets of sensitivities of this measure to various input parameters.

1.8.3 Used by:

- Complex type: AssetValuation

1.8.4 Derived Types:

1.8.5 Figure:

1.8.6 Schema Fragment:

```
<xsd:complexType name="Quotation">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      Some kind of numerical measure about an asset, eg. its NPV,
      together with characteristics of that measure, together with
      optional sensitivities.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:sequence>
    <xsd:group ref="Quotation.model"/>
    <xsd:element name="sensitivitySet" type="SensitivitySet" minOccurs="0" maxOccurs="unbounded">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          Zero or more sets of sensitivities of this measure to various
          input parameters.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
  </xsd:sequence>
</xsd:complexType>
```

1.9 ReportingRoles

1.9.1 Description:

The roles of the parties in reporting information such as positions.

1.9.2 Contents:

baseParty (exactly one occurrence; of the type PartyReference) A reference to the party from whose perspective the position is valued, ie. the owner or holder of the position.

activityProvider (zero or one occurrence; of the type PartyReference) A reference to the party responsible for reporting trading activities.

positionProvider (zero or one occurrence; of the type PartyReference) A reference to the party responsible for reporting the position itself and its constituents.

valuationProvider (zero or one occurrence; of the type PartyReference) A reference to the party responsible for calculating and reporting the valuations of the positions.

1.9.3 Used by:

- Complex type: Position

1.9.4 Derived Types:

1.9.5 Figure:

1.9.6 Schema Fragment:

```
<xsd:complexType name="ReportingRoles">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      The roles of the parties in reporting information such as
      positions.
    </xsd:documentation>

  </xsd:choice>
</xsd:complexType>
```

1.11 ScheduledDate

1.11.1 Description:

An servicing date relevant for a trade structure, such as a payment or a reset.

1.11.2 Contents:

Either

adjustedDate (exactly one occurrence; of the type xsd:date)

type (exactly one occurrence; of the type ScheduledDateType) The type of the date, e.g. next or previous payment.

assetReference (zero or one occurrence; of the type AnyAssetReference) A reference to the leg (or other product component) for which these dates occur.

Either

associatedValue (exactly one occurrence; of the type AssetValuation) The value that is associated with the scheduled date.

Or

associatedValueReference (exactly one occurrence; of the type ValuationReference) A reference to the value associated with this scheduled date.

1.11.3 Used by:

- Complex type: Position
- Complex type: ScheduledDates

1.11.4 Derived Types:

1.11.5 Figure:

1.11.6 Schema Fragment:

    </xsd:element>
    <xsd:group ref="AssociatedValue.model" minOccurs="0" maxOccurs="unbounded"/>
  </xsd:sequence>
</xsd:complexType>
```

1.12 ScheduledDates

1.12.1 Description:

A list of dates (cash flows, resets, etc.) that are relevant for this structure, e.g. next cash flow, last reset, etc. Provides a way to list upcoming or recent servicing dates related to this trade stream in a way that is simpler and more flexible than the FpML "cashflows" structure.

1.12.2 Contents:

scheduledDate (one or more occurrences; of the type ScheduledDate) A single stream level scheduled servicing date.

1.12.3 Used by:

1.12.4 Derived Types:

1.12.5 Figure:

1.12.6 Schema Fragment:

  </xsd:simpleContent>
</xsd:complexType>
```

1.15 SensitivitySet

1.15.1 Description:

A collection of sensitivities. References a definition that explains the meaning/type of the sensitivities.

1.15.2 Contents:

name (zero or one occurrence; of the type xsd:string)

definitionReference (zero or one occurrence; of the type SensitivitySetReference) A reference to a sensitivity set definition.

sensitivity (zero or more occurrences; of the type Sensitivity)

1.15.3 Used by:

- Complex type: Quotation

1.15.4 Derived Types:

1.15.5 Figure:

1.15.6 Schema Fragment:

    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

1.17 Valuation

1.17.1 Description:

A valuation of an valuable object - an asset or a pricing input. This is an abstract type, used as a base for values of pricing structures such as yield curves as well as asset values.

1.17.2 Contents:

objectReference (zero or one occurrence; of the type AnyAssetReference) A reference to the asset or pricing structure that this values.

valuationScenarioReference (zero or one occurrence; of the type ValuationScenarioReference) A reference to the valuation scenario used to calculate this valuation. If the Valuation occurs within a ValuationSet, this value is optional and is defaulted from the ValuationSet. If this value occurs in both places, the lower level value (i.e. the one here) overrides that in the higher (i.e. ValuationSet).

1.17.3 Used by:

- Complex type: AssetValuation
- Complex type: BasicAssetValuation
- Complex type: PricingStructureValuation

1.17.4 Derived Types:

- Complex type: AssetValuation
- Complex type: BasicAssetValuation
- Complex type: PricingStructureValuation

  </xsd:sequence>
</xsd:complexType>
```

1.20 ValuationScenario

1.20.1 Description:

A set of rules for generating a valuation.

1.20.2 Contents:

name (zero or one occurrence; of the type xsd:string) The (optional) name for this valuation scenario, used for understandability. For example "EOD Valuations".

valuationDate (exactly one occurrence; of the type IdentifiedDate) The date for which the assets are valued.

marketReference (zero or one occurrence; of the type MarketReference) A reference to the market environment used to price the asset.

shift (zero or more occurrences; of the type PricingParameterShift) A collection of shifts to be applied to market inputs prior to computation of the derivative.

replacement (zero or more occurrences; of the type PricingInputReplacement) A collection of shifts to be applied to market inputs prior to computation of the derivative.

1.20.3 Used by:

- Complex type: ValuationSet

1.20.4 Derived Types:

1.20.5 Figure:

</xsd:complexType>
```

1.22 ValuationSet

1.22.1 Description:

A set of valuation inputs and results. This structure can be used for requesting valuations, or for reporting them. In general, the request fills in fewer elements.

1.22.2 Contents:

name (zero or one occurrence; of the type xsd:string) The name of the valuation set, used to understand what it means. E.g., "EOD Values and Risks for Party A".

valuationScenario (zero or more occurrences; of the type ValuationScenario) Valuation scenarios used (requested/reported) in this valuation set. E.g., the EOD valuation scenario for a particular value date. Used for the first occurrence of a valuation scenario in a document.

valuationScenarioReference (zero or more occurrences; of the type ValuationScenarioReference) References to valuation scenarios used (requested/reported) in this valuation set. E.g., a reference to the EOD valuation scenario for a particular value date. Used for subsequent occurrences of a valuation set in an FpML document.

baseParty (zero or one occurrence; of the type PartyReference) Reference to the party from whose point of view the assets are valued.

quotationCharacteristics (zero or more occurrences; of the type QuotationCharacteristics) Characteristics (measure types, units, sides, etc.) of the quotes used (requested/reported) in the valuation set.

sensitivitySetDefinition (zero or more occurrences; of the type SensitivitySetDefinition) Definition(s) of sensitivity sets used (requested or reported) in this valuation set.

detail (zero or one occurrence; of the type ValuationSetDetail) Does this valuation set include a market environment?

assetValuation (zero or more occurrences; of the type AssetValuation) Valuations reported in this valuation set. These values can be values (NPVs, prices, etc.) or risks (DAR, etc.) and can include sensitivities.

1.22.3 Used by:

2 Global Elements

2.1 valuationSet

2.1.1 Description:

2.1.2 Contents:

Element valuationSet is defined by the complex type ValuationSet

2.1.3 Used by:

- Complex type: PortfolioValuationItem
- Complex type: TradeValuationItem
- Complex type: ValuationDocument

2.1.4 Substituted by:

2.1.5 Figure:

2.1.6 Schema Fragment:

```
<xsd:element name="valuationSet" type="ValuationSet"/>
```

3 Groups

3.1 AdjustedAndOrUnadjustedDate.model

3.1.1 Description:

Contains at least one of an adjusted date and and unadjusted date, using the usual meanings of those terms.

3.1.2 Contents:

Either

adjustedDate (exactly one occurrence; of the type xsd:date)

3.1.3 Used by:

- Complex type: ScheduledDate

3.1.4 Figure:

3.1.5 Schema Fragment:

```
<xsd:group name="AdjustedAndOrUnadjustedDate.model">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      Contains at least one of an adjusted date and and unadjusted
      date, using the usual meanings of those terms.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:choice>
    <xsd:sequence>
      <xsd:element name="unadjustedDate" type="xsd:date"/>
      <xsd:element name="adjustedDate" type="xsd:date" minOccurs="0"/>
    </xsd:sequence>
    <xsd:element name="adjustedDate" type="xsd:date"/>
  </xsd:choice>
</xsd:group>
```

3.2 AssetValuationOrReference.model

3.2.1 Description:

A quotation or a reference to a quotation.

3.2.2 Contents:

Either

valuation (exactly one occurrence; of the type AssetValuation)

Or

valuationReference (exactly one occurrence; of the type ValuationReference) A reference to a quotation

3.2.3 Used by:

- Complex type: Valuations

3.2.4 Figure:

3.2.5 Schema Fragment:

```
<xsd:group name="AssetValuationOrReference.model">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A quotation or a reference to a quotation.

        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
  </xsd:choice>
</xsd:group>
```

3.3 AssociatedValue.model

3.3.1 Description:

An associated value or reference for a scheduled date.

3.3.2 Contents:

Either

associatedValue (exactly one occurrence; of the type AssetValuation) The value that is associated with the scheduled date.

Or

associatedValueReference (exactly one occurrence; of the type ValuationReference) A reference to the value associated with this scheduled date.

3.3.3 Used by:

- Complex type: ScheduledDate

3.3.4 Figure:

3.3.5 Schema Fragment:

```
<xsd:group name="AssociatedValue.model">
  <xsd:annotation>

        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
  </xsd:choice>
</xsd:group>
```

3.4 PositionIdAndVersion.model

3.4.1 Description:

A model group that includes a position ID and an optional version.

3.4.2 Contents:

positionId (exactly one occurrence; of the type PositionId) A version-independent identifier for the position, possibly based on trade identifier.

version (zero or one occurrence; of the type xsd:positiveInteger) A version identifier. Version identifiers must be ascending, i.e. higher numbers imply newer versions. There is no requirement that version identifiers for a position be sequential or small, so for example timestamp-based version identifiers could be used.

3.4.3 Used by:

- Complex type: AssertedPosition
- Complex type: Position
- Complex type: PositionProposedMatch
- Complex type: PositionReference
- Complex type: RequestedPositions
- Complex type: UnprocessedPosition

3.4.4 Figure:

3.4.5 Schema Fragment:
