## ***1 Global Simple Types***

## 1.1 AveragingInOutEnum

### 1.1.1 Description:

The type of averaging used in an Asian option.

### 1.1.2 Contents:

Inherited element(s): (This definition restricts the content defined by the type xsd:token)

Value	Source	Description
In	http://www.FpML.org	The average price is used to derive the strike price. Also known as "Asian strike" style option.
Out	http://www.FpML.org	The average price is used to derive the expiration price. Also known as "Asian price" style option.
Both	http://www.FpML.org	The average price is used to derive both the strike and the expiration price.

### 1.1.3 Used by:

### 1.1.4 Derived Types:

### 1.1.5 Schema Fragment:

```

```

## 1.2 AveragingMethodEnum

### 1.2.1 Description:

The method of calculation to be used when averaging rates. Per ISDA 2000 Definitions, Section 6.2. Certain Definitions Relating to Floating Amounts.

### 1.2.2 Contents:

Inherited element(s): (This definition restricts the content defined by the type xsd:token)

Value	Source	Description
Unweighted	http://www.FpML.org	The arithmetic mean of the relevant rates for each reset date.
Weighted	http://www.FpML.org	The arithmetic mean of the relevant rates in effect for each day in a calculation period calculated by multiplying each relevant rate by the number of days such relevant rate is in effect, determining the sum of such products and dividing such sum by the number of days in the calculation period.

### 1.2.3 Used by:

### 1.2.4 Derived Types:

</xsd:simpleType>
```

## 1.3 BusinessDayConventionEnum

### 1.3.1 Description:

The convention for adjusting any relevant date if it would otherwise fall on a day that is not a valid business day. Note that FRN is included here as a type of business day convention although it does not strictly fall within ISDA's definition of a Business Day Convention and does not conform to the simple definition given above.

### 1.3.2 Contents:

Inherited element(s): (This definition restricts the content defined by the type xsd:token)

Value	Source	Description
FOLLOWING	<a href="http://www.FpML.org">http://www.FpML.org</a>	The non-business date will be adjusted to the first following day that is a business day
FRN	<a href="http://www.FpML.org">http://www.FpML.org</a>	Per 2000 ISDA Definitions, Section 4.11. FRN Convention; Eurodollar Convention.
MODFOLLOWING	<a href="http://www.FpML.org">http://www.FpML.org</a>	The non-business date will be adjusted to the first following day that is a business day unless that day falls in the next calendar month, in which case that date will be the first preceding day that is a business day.
PRECEDING	<a href="http://www.FpML.org">http://www.FpML.org</a>	The non-business day will be adjusted to the first preceding day that is a business day.
MODPRECEDING	<a href="http://www.FpML.org">http://www.FpML.org</a>	The non-business date will be adjusted to the first preceding day that is a business day unless that day falls in the previous calendar month, in which case that date will be the first following day that us a business day.
NONE	<a href="http://www.FpML.org">http://www.FpML.org</a>	The date will not be adjusted if it falls on a day that is not a business day.
NotApplicable	<a href="http://www.FpML.org">http://www.FpML.org</a>	The date adjustments conventions are defined elsewhere, so it is not required to specify them here.

## 1.4 CalculationAgentPartyEnum

### 1.4.1 Description:

The specification of how a calculation agent will be determined.

### 1.4.2 Contents:

Inherited element(s): (This definition restricts the content defined by the type xsd:token)

Value	Source	Description
ExercisingParty	http://www.FpML.org	The party that gives notice of exercise. Per 2000 ISDA Definitions, Section 11.1. Parties, paragraph (d).
NonExercisingParty	http://www.FpML.org	The party that is given notice of exercise. Per 2000 ISDA Definitions, Section 11.1. Parties, paragraph (e).
AsSpecifiedInMasterAgreement	http://www.FpML.org	The Calculation Agent is determined by reference to the relevant master agreement.

### 1.4.3 Used by:

### 1.4.4 Derived Types:

### 1.4.5 Schema Fragment:

```
<xsd:simpleType name="CalculationAgentPartyEnum">

## 1.5 CalculationMethodEnum

### 1.5.1 Description:

The type of calculation formula to use when combining multiple rates.

### 1.5.2 Contents:

Inherited element(s): (This definition restricts the content defined by the type xsd:token)

Value	Source	Description
Averaging	<a href="http://www.FpML.org">http://www.FpML.org</a>	The resulting value is based on the weighted arithmetic average of the observations performed by the calculation agent. These are described in the 2021 ISDA Definitions in Section 7.4
Compounding	<a href="http://www.FpML.org">http://www.FpML.org</a>	The resulting value is based on a geometric averaging formula which is based on the multiplying the weighted daily rates. It is calculated by the calculation agent. These are described in the 2021 ISDA Definitions in Section 7.3
CompoundedIndex	<a href="http://www.FpML.org">http://www.FpML.org</a>	The resulting value is based on a compounded index calculated by the rate administrator. The calculation agent is responsible for backing out the implied rate by calculating $(\text{final\_index\_level} / \text{initial\_index\_level} - 1) / \text{yearFraction}$ . This calculation is described in Supplement 76 to the 2006 ISDA Definitions, for example in section 6.15, and in the 2021 ISDA Definitions in section 7.7.2 and 7.7.3.

## 1.6 CommissionDenominationEnum

### 1.6.1 Description:

The unit in which a commission is denominated.

### 1.6.2 Contents:

Inherited element(s): (This definition restricts the content defined by the type xsd:token)

Value	Source	Description
BPS	http://www.FpML.org	The commission is expressed in basis points, in reference to the price referenced in the document.
Percentage	http://www.FpML.org	The commission is expressed as a percentage of the gross price referenced in the document.
CentsPerShare	http://www.FpML.org	The commission is expressed in cents per share.
FixedAmount	http://www.FpML.org	The commission is expressed as a absolute amount.

## 1.7 CompoundingMethodEnum

### 1.7.1 Description:

The compounding calculation method

### 1.7.2 Contents:

Inherited element(s): (This definition restricts the content defined by the type xsd:token)

Value	Source	Description
Flat	http://www.FpML.org	Flat compounding. Compounding excludes the spread. Note that the first compounding period has it's interest calculated including any spread then subsequent periods compound this at a rate excluding the spread.
None	http://www.FpML.org	No compounding is to be applied.
Straight	http://www.FpML.org	Straight compounding. Compounding includes the spread.
SpreadExclusive	http://www.FpML.org	Spread Exclusive compounding.

### 1.7.3 Used by:

## 1.28 ObservationPeriodDatesEnum

### 1.28.1 Description:

The specification of whether calculated rates are set relative to the beginning or end of a calculation period, or another date.

### 1.28.2 Contents:

Inherited element(s): (This definition restricts the content defined by the type xsd:token)

Value	Source	Description
SetInAdvance	<a href="http://www.FpML.org">http://www.FpML.org</a>	Calculations will occur relative to the first day of each calculation period, following the "set in advance" conventions outlined in the ISDA definitions. This means that the observation period will be relative to the prior or deemed prior calculation period.
Standard	<a href="http://www.FpML.org">http://www.FpML.org</a>	Calculations will occur using the standard observation conventions, i.e. relative to the current calculation period.
FixingDate	<a href="http://www.FpML.org">http://www.FpML.org</a>	Observations will be based on a fixing date offset specified in the FpML "resetDates" structure, so the observation period will end on a date shifted relative to that date. This option is available for fallback rate calculations and for RFR-based trades that mirror or mimic term-rate based trades.

## 1.45 RoundingDirectionEnum

### 1.45.1 Description:

The method of rounding a fractional number.

### 1.45.2 Contents:

Inherited element(s): (This definition restricts the content defined by the type xsd:token)

Value	Source	Description
Up	http://www.FpML.org	A fractional number will be rounded up to the specified number of decimal places (the precision). For example, 5.21 and 5.25 rounded up to 1 decimal place are 5.3 and 5.3 respectively.
Down	http://www.FpML.org	A fractional number will be rounded down to the specified number of decimal places (the precision). For example, 5.29 and 5.25 rounded down to 1 decimal place are 5.2 and 5.2 respectively.
Nearest	http://www.FpML.org	A fractional number will be rounded either up or down to the specified number of decimal places (the precision) depending on its value. For example, 5.24 would be rounded down to 5.2 and 5.25 would be rounded up to 5.3 if a precision of 1 decimal place were specified.

## 1.47 ShareExtraordinaryEventEnum

### 1.47.1 Description:

Defines the consequences of extraordinary events relating to the underlying.

### 1.47.2 Contents:

Inherited element(s): (This definition restricts the content defined by the type xsd:token)

Value	Source	Description
AlternativeObligation	<a href="http://www.FpML.org">http://www.FpML.org</a>	The trade continues such that the underlying now consists of the New Shares and/or the Other Consideration, if any, and the proceeds of any redemption, if any, that the holder of the underlying Shares would have been entitled to.
CancellationAndPayment	<a href="http://www.FpML.org">http://www.FpML.org</a>	The trade is cancelled and a cancellation fee will be paid by one party to the other.
OptionsExchange	<a href="http://www.FpML.org">http://www.FpML.org</a>	The trade will be adjusted by the Calculation Agent in accordance with the adjustments made by any exchange on which options on the underlying are listed.
CalculationAgent	<a href="http://www.FpML.org">http://www.FpML.org</a>	The Calculation Agent will determine what adjustment is required to offset any change to the economics of the trade. If the Calculation Agent cannot achieve this, the trade goes to Cancellation and Payment with the Calculation Agent deciding on the value of the cancellation fee. Adjustments may not be made to account solely for changes in volatility, expected dividends, stock loan rate or liquidity.
ModifiedCalculationAgent	<a href="http://www.FpML.org">http://www.FpML.org</a>	The Calculation Agent will determine what adjustment is required to offset any change to the economics of the trade. If the Calculation Agent cannot achieve this, the trade goes to Cancellation and Payment with the Calculation Agent deciding on the value of the cancellation fee.

		Adjustments to account for changes in volatility, expected dividends, stock loan rate or liquidity are allowed.
PartialCancellationAndPayment	http://www.FpML.org	Applies to Basket Transactions. The portion of the Basket made up by the affected Share will be cancelled and a cancellation fee will be paid from one party to the other. The remainder of the trade continues.
Component	http://www.FpML.org	If this is a Share-for-Combined merger event (Shares are replaced with New Shares and Other Consideration), then different treatment can be applied to each component if the parties have specified this.
