1 Global Complex Types

1.1 AdditionalData

1.1.1 Description:

Provides extra information not represented in the model that may be useful in processing the message i.e. diagnosing the reason for failure. In case the extra information is in XML format, a CDATA section must be placed around the source message to prevent its interpretation as XML content.

1.1.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type xsd:string)

•

1.1.3 Used by:

- Complex type: Reason

1.1.4 Derived Types:

1.1.5 Figure:

1.1.6 Schema Fragment:

```
<xsd:complexType name="AdditionalData">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      Provides extra information not represented in the model that may
      be useful in processing the message i.e. diagnosing the reason
      for failure. In case the extra information is in XML format, a
      CDATA section must be placed around the source message to prevent
      its interpretation as XML content.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:simpleContent>
    <xsd:extension base="xsd:string">
      <xsd:attribute name="additionalDataScheme" type="xsd:anyURI" use="optional"/>
    </xsd:extension>
  </xsd:simpleContent>
</xsd:complexType>
```

1.2 ConversationId

1.2.1 Description:

The unique identifier (name) for the conversation (session), this message is within. A conversation identifier is usually assigned by the initiator of a conversation. Conversations may only be initiated and terminated. Joining conversations has the effect of initiating new conversations. Conversations cannot be split; this instead has the effect of parallel activities on the same conversation or the initiation of a new conversation. Each message belongs to only one conversation. Conversation scopes are defined in the business process definition.

1.2.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type xsd:normalizedString)

•

1.2.3 Used by:

- Complex type: MessageHeader

1.2.4 Derived Types:

1.2.5 Figure:

1.2.6 Schema Fragment:

```
<xsd:complexType name="ConversationId">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">

      initiated and terminated. Joining conversations has the effect of
      initiating new conversations. Conversations cannot be split; this
      instead has the effect of parallel activities on the same
      conversation or the initiation of a new conversation. Each
      message belongs to only one conversation. Conversation scopes are
      defined in the business process definition.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:simpleContent>
    <xsd:extension base="xsd:normalizedString">
      <xsd:attribute name="conversationIdScheme" type="xsd:anyURI" use="required"/>
    </xsd:extension>
  </xsd:simpleContent>
</xsd:complexType>
```

1.3 Message

1.3.1 Description:

A type defining the basic structure of all FpML messages which is refined by its derived types.

1.3.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type Document)

- The abstract base type from which all FpML compliant messages and documents must be derived.

1.3.3 Used by:

- Complex type: NotificationMessage
- Complex type: RequestMessage
- Complex type: ResponseMessage

1.3.4 Derived Types:

- Complex type: NotificationMessage
- Complex type: RequestMessage
- Complex type: ResponseMessage

1.3.5 Figure:

1.3.6 Schema Fragment:

```
<xsd:complexType name="Message" abstract="true">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A type defining the basic structure of all FpML messages which is
      refined by its derived types.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:complexContent>
    <xsd:extension base="Document"/>
  </xsd:complexContent>
</xsd:complexType>
```

1.4 MessageAddress

1.4.1 Description:

The data type used for identifying a message address. It includes a partyIdScheme for keeping the type backward compatible with the PartyId complex type. In the next major version, partyIdScheme attribute will be replaced by a messageAddressScheme attribute.

1.4.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type xsd:normalizedString)

•

1.4.3 Used by:

1.4.4 Derived Types:

1.4.5 Figure:

1.4.6 Schema Fragment:

```
<xsd:complexType name="MessageAddress">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      The data type used for identifying a message address. It includes
      a partyIdScheme for keeping the type backward compatible with the
      PartyId complex type. In the next major version, partyIdScheme
      attribute will be replaced by a messageAddressScheme attribute.
    </xsd:documentation>

    </xsd:extension>
  </xsd:simpleContent>
</xsd:complexType>
```

1.5 MessageHeader

1.5.1 Description:

A type defining the content model for a generic message header that is refined by its derived classes.

1.5.2 Contents:

conversationId (zero or one occurrence; of the type ConversationId) The unique identifier (name) for the conversation (session), this message is within. A conversation identifier is usually assigned by the initiator of a conversation. Conversations may only be initiated and terminated. Joining conversations has the effect of initiating new conversations. Conversations cannot be split; this instead has the effect of parallel activities on the same conversation or the initiation of a new conversation. Each message belongs to only one conversation. Conversation scopes are defined in the business process definition.

messageId (exactly one occurrence; of the type MessageId) A unique identifier (within its coding scheme) assigned to the message by its creating party.

1.5.3 Used by:

- Complex type: NotificationMessageHeader
- Complex type: RequestMessageHeader
- Complex type: ResponseMessageHeader

1.5.4 Derived Types:

- Complex type: NotificationMessageHeader
- Complex type: RequestMessageHeader
- Complex type: ResponseMessageHeader

1.5.5 Figure:

1.5.6 Schema Fragment:

```
<xsd:complexType name="MessageHeader" abstract="true">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A type defining the content model for a generic message header
      that is refined by its derived classes.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:sequence>
    <xsd:element name="conversationId" type="ConversationId" minOccurs="0">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          The unique identifier (name) for the conversation (session),
          this message is within. A conversation identifier is usually
          assigned by the initiator of a conversation. Conversations
          may only be initiated and terminated. Joining conversations
          has the effect of initiating new conversations. Conversations
          cannot be split; this instead has the effect of parallel
          activities on the same conversation or the initiation of a
          new conversation. Each message belongs to only one
          conversation. Conversation scopes are defined in the business
          process definition.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
    <xsd:element name="messageId" type="MessageId">
      <xsd:annotation>
        <xsd:documentation xml:lang="en">
          A unique identifier (within its coding scheme) assigned to
          the message by its creating party.
        </xsd:documentation>
      </xsd:annotation>
    </xsd:element>
  </xsd:sequence>
</xsd:complexType>
```

1.6 MessageId

1.6.1 Description:

The data type use for message identifiers.

1.6.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type xsd:normalizedString)

•

1.6.3 Used by:

- Complex type: MessageHeader
- Complex type: NotificationMessageHeader
- Complex type: ResponseMessageHeader

1.6.4 Derived Types:

1.6.5 Figure:

1.6.6 Schema Fragment:

```
<xsd:complexType name="MessageId">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      The data type use for message identifiers.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:simpleContent>
    <xsd:extension base="xsd:normalizedString">
      <xsd:attribute name="messageIdScheme" type="xsd:anyURI" use="required"/>
    </xsd:extension>
  </xsd:simpleContent>
</xsd:complexType>
```

1.7 MessageRejected

1.7.1 Description:

A type defining the content for a standard message sent when a recipient cannot interpret or process an earlier message.

1.7.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type NotificationMessage)

- A type defining the basic content for a message sent to inform another system that some 'business event' has occurred. Notifications are not expected to be replied to.

reason (one or more occurrences; of the type Reason) An instance of the Reason type used to record the nature of any errors associated with a message.

additionalData (zero or one occurrence; of the type AdditionalData) Any string of additional data that may help the message processor, for example in a rejection message this might contain a code value or the text of the original request (within a CDATA section).

1.7.3 Used by:

1.7.4 Derived Types:

1.7.5 Figure:

1.7.6 Schema Fragment:

```
<xsd:complexType name="MessageRejected">
  <xsd:annotation>
    <xsd:documentation xml:lang="en">
      A type defining the content for a standard message sent when a
      recipient cannot interpret or process an earlier message.
    </xsd:documentation>
  </xsd:annotation>
  <xsd:complexContent>
    <xsd:extension base="NotificationMessage">
      <xsd:sequence>
        <xsd:group ref="Exception.model"/>
      </xsd:sequence>
    </xsd:extension>
  </xsd:complexContent>
</xsd:complexType>
```

1.8 NotificationMessage

1.8.1 Description:

A type defining the basic content for a message sent to inform another system that some 'business event' has occurred. Notifications are not expected to be replied to.

1.8.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type Message)

- A type defining the basic structure of all FpML messages which is refined by its derived types.

header (exactly one occurrence; of the type NotificationMessageHeader)

validation (zero or more occurrences; of the type Validation)

1.8.3 Used by:

- Complex type: AllocationAmended
- Complex type: AllocationCancelled
- Complex type: AllocationCreated
- Complex type: AmendmentConfirmed
- Complex type: CancelTradeCashflows
- Complex type: ContractCreated
- Complex type: ContractFullTermination
- Complex type: ContractFullTerminationCancelled
- Complex type: ContractIncreased

1.9 NotificationMessageHeader

1.9.1 Description:

A type that refines the generic message header to match the requirements of a NotificationMessage.

1.9.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type MessageHeader)

- A type defining the content model for a generic message header that is refined by its derived classes.

inReplyTo (zero or one occurrence; of the type MessageId) A copy of the unique message identifier (within its own coding scheme) to which this message is responding.

sentBy (exactly one occurrence; of the type MessageAddress) The unique identifier (within its coding scheme) for the originator of a message instance.

sendTo (zero or more occurrences; of the type MessageAddress) A unique identifier (within its coding scheme) indicating an intended recipient of a message.

copyTo (zero or more occurrences; of the type MessageAddress) A unique identifier (within the specified coding scheme) giving the details of some party to whom a copy of this message will be sent for reference.

creationTimestamp (exactly one occurrence; of the type xsd:dateTime) The date and time (on the source system) when this message instance was created.

expiryTimestamp (zero or one occurrence; of the type xsd:dateTime) The date and time (on the source system) when this message instance will be considered expired.

partyMessageInformation (zero or more occurrences; of the type PartyMessageInformation) Additional message information that may be provided by each involved party.

dsig:Signature (zero or more occurrences;

1.9.3 Used by:

1.12 Reason

1.12.1 Description:

A type defining a content model for describing the nature and possible location of a error within a previous message.

1.12.2 Contents:

reasonCode (exactly one occurrence; of the type ReasonCode) A machine interpretable error code.

location (zero or one occurrence; of the type ProblemLocation) A value indicating the location of the problem within the subject message.

description (zero or one occurrence; of the type xsd:string) Plain English text describing the associated error condition

validationRuleId (zero or one occurrence; of the type Validation) A reference identifying a rule within a validation scheme

additionalData (zero or more occurrences; of the type AdditionalData) Any string of additional data that may help the message processor, for example in a rejection message this might contain a code value or the text of any one of the messages (within a CDATA section).

1.12.3 Used by:

- Complex type: NovationConsentRefused
- Complex type: UnprocessedPosition

1.15 RequestMessageHeader

1.15.1 Description:

A type refining the generic message header content to make it specific to request messages.

1.15.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type MessageHeader)

- A type defining the content model for a generic message header that is refined by its derived classes.

sentBy (exactly one occurrence; of the type MessageAddress) The unique identifier (within its coding scheme) for the originator of a message instance.

sendTo (zero or more occurrences; of the type MessageAddress) A unique identifier (within its coding scheme) indicating an intended recipient of a message.

copyTo (zero or more occurrences; of the type MessageAddress) A unique identifier (within the specified coding scheme) giving the details of some party to whom a copy of this message will be sent for reference.

creationTimestamp (exactly one occurrence; of the type xsd:dateTime) The date and time (on the source system) when this message instance was created.

expiryTimestamp (zero or one occurrence; of the type xsd:dateTime) The date and time (on the source system) when this message instance will be considered expired.

partyMessageInformation (zero or more occurrences; of the type PartyMessageInformation) Additional message information that may be provided by each involved party.

dsig:Signature (zero or more occurrences;

1.22 TradeErrorResponse

1.22.1 Description:

An abstract trade error response message containing a single trade or trade reference.

1.22.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type ResponseMessage)

- A type refining the generic message content model to make it specific to response messages.

Either

trade (exactly one occurrence; of the type Trade) An element that allows the full details of the trade to be used as a mechanism for identifying the trade for which the post-trade event pertains

Or

tradeReference (exactly one occurrence; of the type PartyTradeIdentifiers) A container since an individual trade can be referenced by two or more different partyTradeIdentifier elements - each allocated by a different party.

party (one or more occurrences; of the type Party) A legal entity or a subdivision of a legal entity.

1.22.3 Used by:

- Complex type: TradeAlreadyAffirmed
- Complex type: TradeAlreadyCancelled
- Complex type: TradeAlreadyConfirmed
- Complex type: TradeAlreadyTerminated

1.23 TradeNotFound

1.23.1 Description:

A type defining the content model of a response message generated when an operation as requested on a trade unknown to the service.

1.23.2 Contents:

Inherited element(s): (This definition inherits the content defined by the type ResponseMessage)

- A type refining the generic message content model to make it specific to response messages.

Either

tradeIdentifier (exactly one occurrence; of the type TradeIdentifier) An instance of a unique trade identifier.

party (exactly one occurrence; of the type Party) A legal entity or a subdivision of a legal entity.

1.23.3 Used by:

1.23.4 Derived Types:

1.23.5 Figure:

2 Groups

2.1 Exception.model

2.1.1 Description:

A model group which has exception elements.

2.1.2 Contents:

reason (one or more occurrences; of the type Reason) An instance of the Reason type used to record the nature of any errors associated with a message.

additionalData (zero or one occurrence; of the type AdditionalData) Any string of additional data that may help the message processor, for example in a rejection message this might contain a code value or the text of the original request (within a CDATA section).

2.1.3 Used by:

- Complex type: MessageRejected

2.1.4 Figure:

2.1.5 Schema Fragment:

```

2.2 MessageHeader.model

2.2.1 Description:

Defines the structure that contains routing and identification information, which allows processing and transfer of the message. It contains only messaging information that is applicable to all messages. If the information is not message related or is not applicable to all messages then it is not defined in the message header.

2.2.2 Contents:

sentBy (exactly one occurrence; of the type MessageAddress) The unique identifier (within its coding scheme) for the originator of a message instance.

sendTo (zero or more occurrences; of the type MessageAddress) A unique identifier (within its coding scheme) indicating an intended recipient of a message.

copyTo (zero or more occurrences; of the type MessageAddress) A unique identifier (within the specified coding scheme) giving the details of some party to whom a copy of this message will be sent for reference.

creationTimestamp (exactly one occurrence; of the type xsd:dateTime) The date and time (on the source system) when this message instance was created.

expiryTimestamp (zero or one occurrence; of the type xsd:dateTime) The date and time (on the source system) when this message instance will be considered expired.

partyMessageInformation (zero or more occurrences; of the type PartyMessageInformation) Additional message information that may be provided by each involved party.

dsig:Signature (zero or more occurrences;

2.2.3 Used by:

- Complex type: NotificationMessageHeader
- Complex type: RequestMessageHeader
- Complex type: ResponseMessageHeader
