Within "ReturnSwapNotional's" choice

1. To deprecated the element "amountRelativeTo" of type
"AmountReference" and remove it in 5-0. Instead use the
"relativeNotionalAmount" or "ReturnSwapNotionalAmountReference".
2. Created new element "relativeNotionalAmount" of type
"ReturnSwapNotionalAmountReference" that would point to

"NotionalAmount" structure to reference return swap notional amount elsewhere on the document.

3. Create new element "relativeDeterminationMethod" of type "DeterminationMethodReference" that would point to "DeterminationMethod" structure to reference return swap notional determination method elsewhere in the document.
4. Made an element notionalAmount of type NotionalAmount Rational: The HREFs reference "determinationMethod" or "notionalAmount" rather than their parent. This approach used schema structure to preclude any circularity (there is no need to created Business Validation Rules).
